Sold by all Ironmongers, and the Inventor,
GEORGE JENNINGS,
Sanitary and Engineering Depôt, Holland-street, Blackfriars-road.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM SIR RAYMOND JARVIS, Bart VENTNOR, ISLE of WIGHT—Second Testimonial.—"March 10th, 1862.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

The VARNISH for damp walls, previous to papering, coating zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Booth, contractors, Gosport:—
"We have repeatedly used your Waterproof Glue as a preventive against damp, and have found it most valuable in preparing walls to receive paper. In one instance, where the walls were thoroughly saturated with moisture from earth filled against the outside, we used your varnish internally, and papered the surface, within a few hours of its being applied, with complete success. We have also used your preparation for coating a large number of cast-iron piles, at the Dunwharf, Portsea, for her Majesty's War Department."
To be had from all Ironmongers, Oil and Colourmen, &c.
Manufactory, Chandos-street, Portsmouth: Mr. GEORGE WEEKS, Manager. GEORGE C. WARDEN & CO. General Agents, 12, London-street, London, E.C. where specimens of its application can be seen.

JAMES HAYWOOD, JUN.
PHŒNIX FOUNDRY AND ENGINEERING WORKS, DERBY.

FIRE-PROOF CONSTRUCTION.—FOX & BARRETT'S PATENT.
This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon the principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the Patent,
MR. BARRETT,
12, YORK BUILDINGS, ADELPHI

GEORGE JACKSON AND SONS
(Established in 1730)

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic, Elizabethan, Italian, Renaissance, Louis XIV. XV. XVI. and many other styles; also rich or simple Panel Decorations, Elizabethan and Gothic Dados, Door Caps, Mouldings of all sizes, and to their varied selection of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Column and Pilaster Capitals, all executed in the highest style of art.

The large and long-established experience of GEORGE JACKSON and SONS in decorations of Drawing and Dining Rooms, Libraries, &c. for private houses, or public buildings, many of which they have had the honour of executing under Architects of the highest eminence, enables them with confidence to direct notice to that branch of their business.

Upholsterers are invited to inspect the large variety of Glass Frames, Tables, Cornices, Screens, Candelabras, &c. The large extent of their works, and the recent adoption of steam power and machinery, enable them to offer very superior advantages in materials and speed; while for design, quality, relief, and finish, they flatter themselves they stand unrivalled.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. Which is sold under the name of "Improved Zinc Paint, on sale number Two or Three months, no workman can produce good work with such material. We warn those who have confidence in the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS. Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

TO CAPITALISTS, BUILDERS, and OTHERS.—Persons willing to ERECT two small detached VILLAS on Leckhampton Hill, adjoining the Birdlip road, may obtain Plots of Land for that purpose, in the best part of this picturesque locality, commanding extensive views of the Vale of Gloucester and surrounding country, on Building Leases at a very low ground rent, with power to purchase the freehold. A lease for Ten years, to pay £6 per cent. per annum, will be guaranteed for one house.—Full particulars and every information will be given on application to Mr GEO W. SADLER, Architect and Surveyor, 407, High street, Cheltenham.

FREEHOLD GROUND between the Forest Hill and Sydenham Stations TO BE LET on long Building Leases.—For plan and particulars, apply to C. F. REEKS, Esq. Architect, 12, Middle Scotland-yard, S.W.

TO BUILDERS and OTHERS. TO BE LET, several PLOTS of BUILDING LAND, situate in the best part of Stoke Newington, where houses are in great demand. Brick supplied on the estate at a low price, and may be passed on the ground for building purposes. Apply to Mr R. RIDDA, at the Estate Office, Bouverie-road, Church street, Stoke Newington.

CATERHAM, on the Surrey Hills, 17 miles from London.—LAND TO BE SOLD or LET, in plots of from 4 to 20 acres, for first-class residences, either on the hill or in the valley. Healthy soil. Ample supply of the best spring water to the tops of the houses.—Apply to Mr. R. MARTIN, Estate Office, Caterham.

PHILBROKE ESTATE, at Leytonstone, on the Woodford and Loughton Railway, twenty minutes from Fenchurch and Bishopsgate Stations.—This valuable FREEHOLD ESTATE (land-tax redeemed), surrounding the Station, healthy locality, gravelly soil, excellent drainage, water and gas laid down, roads made, and can be let on the estate, it is proposed TO LET in Plots suitable for villas, detached and semi-detached villas. Repeated applications have been made for houses in this neighbourhood. For terms, apply to Mr. ATHEY, at the Surveyor's Office, Philbroke Estate, Leytonstone, Essex.

CLERKENWELL.—TO BE LET, by TENDER, on repairing lease, those eligible CORNER PREMISES known as 49, Turnmill street, and 28, Clerkenwell green, close to the Sessions House, and near to the Farringdon street Station of the Metropolitan Railway. Tenders to be sent in on or before the 18th MARCH next, addressed to the Trustees of St. James's, Clerkenwell, and endorsed "Tender for Premises, Clerkenwell-green."—Further particulars may be had by applying to me, at the Vestry Hall, 23, Upper Rosoman-street, any day from TEN till FOUR. By order, February 23, 1863. ROBERT PAGET, Vestry Clerk.

BUILDING LAND TO BE LET, HACKNEY, close to the Railway Station, for small Dwelling Houses.

NORWOOD, close to the Crystal Palace, for Shops and Villas.
PERRY-HILL, SYDENHAM, for Shops. Advances in each case if required.—Apply to Mr. T. K. GREEN, 2, College hill, Cannon-street, E.C.

TO BUILDERS, SPECULATORS, and OTHERS.—TO BE LET, on a long Lease, TWO HOUSES, possessing a frontage of 72 feet to the busy thoroughfare of Blackman-street, Borough, by a depth of 217 feet. One house has for many years been licensed as a Tavern, and the other possesses extensive premises in the rear. There are likewise Warehouses, roomy Stabling, and other useful Buildings attaching, which readily command tenants and produce a good rental.—Further particulars can be obtained of HENRY HYDE, Esq. Solicitor, 33, Ely-place, Holborn; and of Messrs. TRICKETT & SON, Land Agents and Surveyors, 62, Chancery-lane, W.C. and Highgate, where a plan of the property can be seen.

WOODFORD RAILWAY.—THE GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is 400 yards only from the Estate, and the City is reached in twenty-five minutes. The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Twickenham, Kingston; some very eligible SITES in the Grove-road, Mile-end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 29, Cannon-street.

TO CONTRACTORS.—TO BE LET, in four Contracts, the EARTHWORK, CLAYING, and STONE-PITCHING required for the RE-CONSTRUCTION of 4,000 lineal yards of the SEA EMBANKMENT near Fleetwood, Lancashire. Drawings and Specifications may be seen at the Office of Messrs. GARLICK & PARK, 33, Winckley-square, Preston, up to MARCH 9th.

RICHMOND, Surrey.—Valuable FREEHOLD LAND TO BE LET for BUILDING.—1st. The substantial mansion known as Suffield House, capable of being divided into two residences; frontage 62 feet, depth 240 feet. 2nd. The frontage next Paradise road, 41 feet, depth 55 feet. 3rd. The frontage to Eton street, 123 feet, and depth, average 51 feet. 4th. The frontage next Marsh gate road, 51 feet, depth 174 feet. The whole of the above lots are situate within five minutes' walk of the railway station.—To view, apply at the Mansion; and for particulars, to Mr. W. HUDSON, Architect, 19, Bennet's hill, Doctors' Commons.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for ninety-nine years.—For plans, &c. apply by post, pre-paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

BUILDING LAND TO BE LET or SOLD, at Sydenham, near the Church, the Railway Station, the Crystal Palace and Park. It fronts a wide, handsome roadway, and has 80 ft. by depth for garden grounds. All the houses on the estate are of a good class, and the rents obtained give an average return of 12 per cent. on the outlay. The remaining frontage will be let at a low rent, to secure the ground being speedily covered.—Terms and particulars of Messrs. EDWIN FOX & BOUSFIELD, Land Agents, 41, Coleman-street, Bank, E.C.

TO BUILDERS and OTHERS.—Notice is hereby given that the Trustees of the Rev. Dr. Spurlow's Charity Estate at Hackney have several PLOTS of LAND TO LET to build on, eligible for villas and other respectable private dwellings. The land will be direct from the freeholder, and free of land tax and the communion rent-charge. The above estate offers an excellent opportunity to persons desirous of building houses to reside in themselves.—For further particulars enquire of Mr. GLIDDON, Surveyor, No. 2, Old Church-yard, Hackney; or of Mr. C. H. FULLEY, of Upper Homerton, and 28, Great Winchester-street, Old Broad-street, City, Solicitor.

HYTHE, near FOLKESTONE.—TO BE LET, upon advantageous terms, the SEA FRONTAGE between the Martello Towers at the delightful watering-place, with Building Lease, in plots or the whole. There is an excellent site for an hotel, which is much required.—For particulars, apply to W. F. DANGERFIELD, Esq. Hythe, or Ashford, Kent.

GUILDHALL, 26th February, 1863.—The Committee for Letting the City's Lands will meet at GUILDHALL, on WEDNESDAY, the 11th MARCH next, at ONE o'clock precisely, to receive PROPOSALS for LEASES of a House, No. 24, New Broad-street; a House, No. 6, Broken-wharf, Upper Thames-street; a House, No. 20, Tabernacle-row; Two Houses, No. 46, Bannerstreet, and No. 25, Coleman-street; Twelve Houses, Nos. 1 to 12, in King's Arms-court, Windmill street, Finsbury; and Two Houses, No. 6, Old street, and No. 11, Ragged row, St. Luke's. Plans of the property may be seen, and forms of Tender obtained, upon application at the Architect's Office, Guildhall.

FERDINAND BRAND, Comptroller.

TO PLUMBERS, GASFITTERS, &c.—WANTED to PURCHASE a SMALL BUSINESS in the above line, in or near London.—Address, with all particulars, including amount required, to PLUMBER, Office of "The Builder."

FOR SALE.—An ENGINEERING and BOILER-MAKING BUSINESS TO BE DISPOSED of, by PRIVATE TENDER. The Works are situated at Corkickle, near Whitehaven, the Machinery, Tools, and Patterns are all modern, and in first-rate condition. The business is now in full operation and has been increasing satisfactorily for the last few years.—All particulars may be ascertained on application to Mr. PETER CAMERON, Banker; or Mr. JOHN WHITTLE, Iron Merchant, Whitehaven; also from Mr. NATHANIEL CAINE, Iron Merchant, Liverpool.

Whitehaven, February 9th, 1863.

PORTLAND CEMENT WORKS.—TO BE DISPOSED OF, in consequence of the Dissolution in Partnership, the PORTLAND CEMENT WORKS now in operation on Bishop's Marsh, near Chatham.—Apply to Mr. E. W. PHIBBS, Cambara-hill, Chatham.

TO BUILDERS, WHEELWRIGHTS, and CARPENTERS.—In consequence of the death of Mr. Samuel Terry, the old-established BUSINESS of BUILDERS, WHEELWRIGHTS, and CARPENTERS, hitherto carried on by the firm of "Terry & Son," in the rapidly improving town of Hailsham, in Sussex, is now to be DISPOSED OF. The purchaser will have to take the stock by valuation, and may purchase the premises where the business is carried on, as the same must now be sold. A person of ability and some little capital would be certain to command a first-rate business, as the neighbourhood is excellent and the business premises are very commodious and handy to the railway terminus.—Application to be made to Mr. H. C. SINNOCK, Solicitor, Hailsham.

TO WINDOW-GLASS CUTTERS, LEAD and PAPERHANGING DEALERS.—An ESTABLISHED BUSINESS in the above line TO BE DISPOSED OF, in a great thoroughfare in the City. Terms very moderate.—Apply at 137 Bishopsgate street Without.

Office—10, Three Crown square, Southwark.

LITTLE CASTERTON FREESTONE.
Apply for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the office of
Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn street, W.
This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth saw, and is wrought at a cheaper rate than any stone in the kingdom.

TWO PRIZE MEDALS OBTAINED at the INTERNATIONAL EXHIBITION.—Architects, Contractors, and Builders, before ordering CHIMNEYPIECES should inspect the Extensive STOCK of ENAMELLED SLATE CHIMNEYPIECES (which, for beauty of design and moderate prices, defy competition), at the LLANGOLLEN SLAB and SLATE COMPANY'S WHARF, 4, South Wharf-road, Praed-street, Paddington, W.

TWO PRIZE MEDALS OBTAINED AT THE INTERNATIONAL EXHIBITION.
THE LLANGOLLEN SLAB and SLATE COMPANY, LIMITED, have in stock a quantity of enamelled SLATE CHIMNEYPIECES, of the most choice designs, and at prices ranging from 10s. to 10l. 10s. Their sales now extend throughout Europe, America, Australia, and the East Indies, for these beautiful articles, which are superseding marble. Slate Slabs, Cisterns, Sinks, Filters, and Roofing Slates, always on hand. For further particulars apply at the Company's Depôt, 4, South Wharf-road, Praed-street, Paddington, W.

F. RANSOME'S
NEW PATENT CONCRETE STONE,
Made without burning,
For which the Commissioners of the Exhibition of 1862 HAVE AWARDED THE PRIZE MEDAL, and which for SHARPNESS OF OUTLINE, BEAUTY OF APPEARANCE, DURABILITY, AND CHEAPNESS, stands unrivalled. Manufactured in BLOCKS of any dimensions, suitable for the construction of SEA WALLS, DOCKS, &c. as well as BUILDINGS generally. It surpasses every other material in its applicability to every description of ARCHITECTURAL EMBELLISHMENT, CAPITALS FOR COLUMNS AND PILASTERS, CHIMNEYPIECES, TRUSSES, BALUSTRADES FOR TERRACES, GATE PIERS, CAPS, AND TERMINALS, Monuments, Tombs, and all kinds of Cemetery Requirements, &c. &c.
For prices, specimens, illustrations, and licenses, apply to Mr. FREDK. RANSOME, 26, Parliament-street, Westminster, or Patent Stone Works, Ipswich.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building Purposes. Supplied direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 27, Millbank-street, London, S.W.

NOTICE.—BUILDERS and DECORA-
TORS will find superior and unparalleled advantages in MEAD'S PATENT GRAINS, comprising the rich oak, satin wood, walnut, Spanish mahogany, &c.; they far surpass anything ever seen, and entirely supersede paint for the interior woodwork of dwelling-houses, being admirably adapted for the castle, the magnificent hall, the library, the drawing-room, and the miniature cottage; also for church work, merchants' and bankers' offices, railway stations, schools, &c. &c.—To be had of T. J. HOGG, 3, Brunswick-place, City-road, E.C.; and at the Works, Abridge, Essex. Price 8s. per gallon. Post orders will have best attention. The above merits special notice. The chaste and beautiful effect given to work finished with them, and great saving in time and expense, are highly appreciated by the most experienced workmen.

PATENT GRAINING APPARATUS.—
TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.
One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They are very cheap, and will repay the cost of them in two days' working. They only require a trial, and any person studying his interest would not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 32, High street, Marylebone, London, W.
N.B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post-office order for 22s

DRAWINGS, WITH PRICES, WILL BE FORWARDED FREE, ON APPLICATION.

HENRY DOULTON AND CO.'S

PATENT COMBINED SMOKE AND AIR FLUES.

BY THIS INVENTION PERFECT DRAUGHT AND COMPLETE VENTILATION CAN BE SECURED.

THE air-flue follows the line of the smoke-flue, the passages being quite distinct. The heat from the smoke-flue causes a current, which carries off the vitiated air admitted by junctions near the ceiling. The pipes or blocks are *all made to bond with ordinary brickwork.*

Where the blocks come together, each air-flue has a lip or projection, which enters the next block and completely shuts off the air-flue from the smoke-flue at the joint. This lip, with dowels at the opposite corners of the blocks, also holds the lengths firmly together.

Curves are made to suit any inclination.

Manufactured in terra cotta for smoke-flues equal to 12 in. 10 in. and 8 in. diameter, with ventilating-flues of proportionate size.

Small models will be forwarded to architects on application to

Henry Doulton & Co. High-street, Lambeth

ARMANI AND CO.

GEORGE GILBERT SCOTT, Treasurer.
March, 1863. JOSEPH CLARKE, Hon. Sec.

ROYAL ACADEMY of ARTS.—NOTICE to ARTISTS.—All works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the Royal Academy, must be sent in on MONDAY, the 6th, or TUESDAY, the 7th of APRIL next, after which time no Work can possibly be received, nor can any Works be received which have already been publicly exhibited

FRAMES.—All Pictures and Drawings must be in gilt frames. Oil Paintings under glass, and Drawings with wide margins are inadmissible. Excessive breadth in frames as well as projecting mouldings may prevent pictures obtaining the situation they otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy JOHN PRESCOTT KNIGHT, R.A. Secretary.

Every possible care will be taken of Works sent for exhibition; but the Royal Academy will not hold itself accountable in any case of loss, nor can it undertake to pay the carriage of any package.

The Prices of works to be disposed of may be communicated to the Secretary.

ARCHITECTURAL ASSOCIATION, 9, Conduit street, W.—The Adjourned DISCUSSION on the subject of "VENTILATION" will take place on FRIDAY Evening next, MARCH 20th, 1863, at the Rooms of the Association, to commence at EIGHT o'clock precisely. Visitors will be admitted by giving their names to the Hall Porter,

CHARLES J. ADAMS, }
H. A. REEVES, } Hon. Secs.

ART-UNION of LONDON.—Subscription, One Guinea.—First Prize, "The Dancing Girl Reposing," marble statue, value 700 guineas. Also Parian Busts of H.R.H. the Princess of Wales, besides the right of choosing a work of art from 100 to 500l. Every subscriber has an impression of a Line Engraving from the original picture, by T. F. Dicksee, "A Labour of Love," together with a set of Sixteen Designs in Outline, illustrating Tennyson's poem, "Idylls of the King," now ready for delivery. The lists close MARCH 31st. GEORGE GODWIN, }
444, West Strand, March, 1863. LEWIS POCOCK, } Hon. Secs.

BILLING'S PATENTS. CHIMNEY TERMINALS, THROAT VALVES.

NOTICE to ARCHITECTS.—The Proprietors of the late Mr Billing's Patents have secured the services of Mr. H. H. COLLINS, M.I.B.A. of No 10, Poultry, E.C as the Consulting Architect, from whom full particulars and the reduced prices may be obtained; or from the Manager, Mr. TYLER, 12, Abingdon street, Westminster, S.W.

COMPETITIONS.

TO SCULPTORS.—The Executive Committee of the Oastler Monument will be glad to receive DESIGNS and PROPOSALS from sculptors, for a MONUMENT to the late Richard Oastler, which is to be erected in Bradford. The statue is to be placed upon a pedestal, in a speaking attitude, and to have at the base, small figures of factory children supplicating the great philanthropist to redress their grievances. The cost of the statue, which is expected to be colossal, is not to exceed 1,000l. and the design must be approved and have the preference of the committee. The committee are open to receive a DESIGN for a FIGURE, in marble, under a Gothic canopy, with groups of factory children in bas-reliefs on the pedestal.—Communications may be addressed to W. WALKER, Esq. Bolling Hall, Bradford, the Chairman of the Executive Committee

Bradford, March 4, 1863.

EXTENSION of TIME.—To ARCHITECTS.—A PREMIUM of 25l is offered for the best PLAN for LAYING out EIGHT ACRES of LAND at Ripon, in building sites, with the elevations of detached and semi-detached villas of from 30l. to 50l. rental. Plans to be sent in by the 23rd of APRIL.—For further particulars and to view the ground, application must be made to ROBERT WILLIAMSON, Jun. }
Ripon, March 5th, 1863. JOSEPH STEVENSON, } Hon. Secs.

A BERYSTWYTH CEMETERY.—The Burial Board being about building TWO CHAPELS and a LODGE, upon the new Cemetery, provided for the parish of Aberystwyth, Architects are invited to submit PLANS of such Chapels and Lodge, to cost the cost of which not to exceed 800l. One of the Chapels is to be built on the consecrated portion of the Cemetery, and the other on the unconsecrated portion thereof, and are to be detached, and each Chapel is to contain sittings for one hundred persons. The Burial Board will award 5l as by way of premium for the plan selected.—Further particulars may be obtained from the undersigned, to whom the plans are to be sent, free of expense, on or before the 2nd day of APRIL, 1863.

HUGH HUGHES,
Clerk to the Burial Board, Aberystwyth.

CONTRACTS.

WAR DEPARTMENT CONTRACT.

NOTICE to BUILDERS.—Tenders are required for the supply at the Verne Fortifications, Portland, and the Nothe Fortifications, Weymouth, of TOOLS, timber, iron, steel, rails, castings, and other PLANT which may from time to time be required for the War Department Works, in the Portland District, from 1st APRIL, 1863, to 31st MARCH, 1864, inclusive.

Parties desiring to Tender for the above must leave their names at this Office on or before the 23rd day of MARCH, 1863, and pay the sum of 10s. 6d. for the printed schedule of prices.

The Secretary of State for War reserves to himself the right of rejecting the whole or any of the Tenders, and does not bind himself to accept one Tender for both places

C. H. NUGENT,
Captain and Major commanding Royal Engineers.
Royal Engineer Office, Weymouth, 11th March, 1863.

EXTENSION of TIME for receiving TENDERS—CITY of LONDON, BARBERS' HALL—Important SITE for WAREHOUSES or MANUFACTURING PREMISES in the immediate vicinity of Wood street, Cheapside.—The Committee of the Worshipful Company of Barbers will meet at their Hall on THURSDAY, the 26th day of MARCH, 1863, to receive TENDERS for LETTING, on a Building Lease for 99 years, the Extensive PREMISES known as Barbers' Hall, situate in Monkwell street, Wood street, comprising three houses fronting Monkwell street, Nos 31, 34, and 35; part of the courtyard in the rear thereof, the passage leading thereto, and the greater portion of the Company's Hall, together with the kitchen, scullery, and outbuildings, having a frontage towards Monkwell-street of about 83 feet, by an average depth of about 116 feet, and an extreme depth of about 135 feet.—Full particulars, with a plan of the property, elevation and section of street-front, also conditions of letting, may be obtained on application to the Clerk of the Company; to Mr. CHARLES JOHN SHOPPEE, the Company's Surveyor, No. 61, Dorset street, W.C.; or to the Beadle at the Hall.—By order,

HENLEY GROSE SMITH, Clerk.
4, Warnford court, Throgmorton street, E.C.

PERSONS desirous of TENDERING for the ERECTION of a DOUBLE VILLA at Darlington, may inspect plans and specifications at the Offices of THOMAS SIMPSON, Architect, Nottingham, on and after WEDNESDAY, the 4th day of MARCH, until WEDNESDAY, the 18th; or at the Offices of JOSEPH PEASE, Esq. Darlington, on THURSDAY, the 19th day of MARCH, until THURSDAY, the 2nd of APRIL. Sealed Tenders to be addressed to JOSEPH PEASE, Esq. and delivered at the Offices last named, not later than MONDAY, the 6th day of APRIL. The lowest or any Tender not necessarily accepted.

TO MASONS and PAVIORS.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City on TUESDAY, the 17th of MARCH next, at TWELVE o'clock precisely, to receive TENDERS for the execution of such MASON'S and PAVIOR'S WORKS as may be required by them to be done within the City, for a period of THREE YEARS, from Lady Day next, upon the terms contained in their specification, printed copies of which may be obtained at this Office on payment of the sum of 1l. 1s. each, which will be returned to such persons who shall send in a *bona fide* Tender. Persons Tendering are required to give the names and addresses of at least two substantial householders as their sureties to enter into bond with the Contractor for the due performance of the Contract. The Commissioners do not pledge themselves to accept the lowest Tender or any unless deemed satisfactory; and no Tender will be received after TWELVE o'clock on the day of treaty. The party sending in proposals must attend personally, or by duly authorised agents, on the day and hour mentioned

JOSEPH DAW, Principal Clerk.
Sewers' Office, Guildhall, 23rd February, 1863.

TO BUILDERS and CONTRACTORS.—SHEPPY GAS CONSUMERS' COMPANY (Limited).—TENDERS are invited for BUILDING a BRICK GAS HOLDER TANK, a METER HOUSE, SMITH'S FORGE, and for certain ALTERATIONS and EXTENSIONS at the Works of the above Company at West Minster, Sheppy, Kent. The plans, specifications, and forms of Tender may be inspected daily at the Office of Mr. JOSIAH HALE, Surveyor, Queenborough, Sheppy, Kent, between the hours of TEN a.m. and FOUR p.m. up to SATURDAY, the 14th day of MARCH next. Enclosed Tenders to be delivered on or before SIX o'clock p.m. on MONDAY, the 16th day of MARCH next, addressed to "The Secretary of the Sheppy Gas Consumers' Company (Limited)," at the office of the Company, 14 Edward street, Banks Town, Sheerness, endorsed "Tender for Gas-Holder Tank, &c" by order of the Board of Directors A. W MARKS, Secretary.
Company's Office, March 3rd, 1863.

CHELTENHAM CEMETERY.—To BUILDERS.—Notice is hereby given, that the Cheltenham Burial Board intend to enter into a CONTRACT for ERECTING the CHAPELS and other BUILDINGS at the Cheltenham Cemetery, according to the specifications and drawings, form of contract, and bond, which may be seen at the Office of the Architect, Mr. W. H. KNIGHT, The Old Farm, St. George's place, Cheltenham. Proposals or Tenders to be delivered to Mr G. E. WILLIAMS, Clerk to the Burial Board, on or before WEDNESDAY, the 1st day of APRIL next evening, at the Office of the Burial Board, in Hatherley-road, known as the Public Offices, between the hours of TEN a.m. and FOUR p.m. endorsed Tender for Buildings &c at the Cheltenham Cemetery," and such Tenders to contain the names, residences, and descriptions of two sureties for the due execution of the contract. The Tenders may be for the whole of the Works, or separately for the chapels and lodge. The Board will not be considered pledged to accept the lowest or any Tender.—Dated this 2nd day of March, 1863.

GEORGE EDMUNDS WILLIAMS,
Clerk to the Cheltenham Burial Board.

TO ENGINE and PUMP MAKERS.—The Uxbridge Local Board of Health is prepared to receive TENDERS for the SUPPLY and DELIVERY of NEW PUMPS, and raising the same, at the Waterworks in Waterloo road, Uxbridge. The specification may be seen and orders for the Works may be obtained, upon application to Mr. GEORGE EVES, Surveyor to the Board, High street, Uxbridge. Tenders, on Lithographed forms only, which will be supplied, to be sent in, under cover, to me before TWELVE o'clock, noon, on THURSDAY, the 2nd day of APRIL next. The Board will not be bound to accept the lowest or any Tender.

CHARLES WOODBRIDGE, Clerk to the Board.
Uxbridge, March 5th, 1863.

WEAVER NAVIGATION.—To CONTRACTORS.—The Trustees of the River Weaver are prepared to receive TENDERS for the CONSTRUCTION of four WASTE WEIRS, to be executed according to plans and specifications, which may be seen at this Office on and after the 16th instant. Sealed Tenders, marked "Tenders for Waste Weirs," to be delivered at the Office of the Trustees, Northwich, on or before the 31st instant. The Trustees do not bind themselves to accept the lowest or any Tender.

E. LEADER WILLIAMS, Jun.
Engineers' Office, Northwich, 5th March, 1863.

TO BUILDERS and CONTRACTORS.—Persons desirous of CONTRACTING for the ERECTION of CEMETERY CHAPELS, LODGE, and FENCE WALLS, for the Ringwood Burial Board, are requested to apply at the Office of Mr. CLARKE, Architect, Corn Market, Salisbury, where plans, specifications, and conditions may be seen, and blanks of quantities obtained.—Sealed Tenders to be delivered to the undersigned, on or before SATURDAY, the 21st day of MARCH inst. The Board do not pledge themselves to accept the lowest or any Tender. The Contractor must, if required, find sureties for the due fulfilment of his contract. RICHARD BROWN, Clerk to the Board.
Ringwood, March 3, 1863.

TO ENGINEERS and OTHERS.—TENDERS WANTED for 100 feet of BORING THROUGH CLAY, with the insertion of a Bore Pipe, from the Bottom of an Excavated Well, in Northampton. The process to be tube Pipe.—Full particulars given on application to C. C. IRESON, Esq. Northampton. Estimates wanted by MARCH 21st next.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a BAILIFF'S COTTAGE and FARM HOMESTEAD, at Early Wood, Sunning hill, Berkshire, may see the plans and specifications on and after MONDAY, the 16th instant, at the House on the Farm. Tenders to be forwarded under cover to me on or before MONDAY, the 30th instant, to Mr. J. BAILEY DENTON, 72, Parliament-street, Westminster. Quantities not supplied. The lowest or any Tender not necessarily accepted.

[For remainder of Contracts see next Page.

CONTRACTS.

TO BUILDERS and OTHERS.—A Gentleman wishes to find somebody who will BUILD FIFTY or more COTTAGES on one frontage or other land belonging to him, not far from Portsmouth Dockyard, fifty or sixty miles from Exeter, if required. The tenants to be always members of the Church of England. Power over the whole or part of the house-built area to be agreed upon beforehand, or settled by after arbitration.—Apply, in the first instance, to Mr. TELFER, Agent, 20, Arthur street, New Oxford-street, London.

TO COAL MERCHANTS, GAS and COKE COMPANIES.—The Commissioners for Public Baths and Wash-houses for St. George, Hanover-square are ready to receive TENDERS for the SUPPLY of WELSH or MERTHYR TYDVIL COALS, Newcastle Wall and Large Coals, and Newcastle Wallsend SMALL Coals of the best quality, at per ton, and COKE at per chaldron, for twelve months, from the 31st MARCH instant to be delivered free of expense, at the respective establishments in Davies street, Berkeley square, and Lower Belgrave-place, Pimlico, as and when and in such quantities as may be ordered. The Tenders to specify the name of the Pit or Works, Coke to be tested, and delivered. "Tender for Coke," and "Tender for Coals" and Tenders for the said sent in to meet the Board for Coals, at Grosvenor-house aforesaid, before TEN o'clock on THURSDAY, the 26th MARCH instant. The Commissioners do not bind themselves to accept the lowest or any Tender.—By order,

W. H. BANISTER, Clerk to the Commissioners.

March 11th, 1863

CHAPLIN'S PATENT PORTABLE STEAM-ENGINES AND BOILERS.

PRIZE MEDAL.—INTERNATIONAL EXHIBITION, 1862.

Stationary Engine. From 1 to 30 horse power. | Portable Hoist. 1 to 30 horse power. | Steam Crane.* 30 cwt. to 10 tons. | Engine & Crane. 2 to 25 horse power. | Contractor's Locomo. 6 to 27 horse power. | Traction Engine. 6 to 27 horse power. | Ships' Engine. Winding and Cooking.

* These Cranes were selected by Her Majesty's Commissioners to receive and deposit the heavy machinery in the International Exhibition.

Full particulars and Prices for Delivery in Glasgow or London, on application to

ALEXANDER CHAPLIN & CO. PATENTEES & SOLE MANUFACTURERS,

CRANSTON-HILL ENGINE WORKS, GLASGOW;

LONDON—OFFICE, 9, ADAM STREET, ADELPHI, W.C.; DEPOT AND WHARF, LOWER FORE STREET, NEAR STEAM-BOAT PIER, LAMBETH.

Parties are cautioned against using or purchasing imitations or infringements of these Patent Manufactures.

TO ARCHITECTS AND BUILDERS, RAILWAY CONTRACTORS, &c.

MANUFACTURER OF WROUGHT-IRON GIRDERS

Designed and Guaranteed as to Strength.

WROUGHT AND CAST IRON
RAILWAY BRIDGE BUILDER.
RAILWAY STATION ROOFING
Manufactured in WROUGHT and CAST IRON, and ERECTED.
TANKS IN WROUGHT AND CAST IRON.
Wrought Iron Doors, Boiler and General Smith's Work.
EVERY DESCRIPTION OF BUILDERS' CASTINGS.

ROLLED WROUGHT-IRON FLITCH PLATES
And various Sections of
ROLLED GIRDERS AND JOISTS,
SHEETS, BARS, L and T IRON.
Band Hoop Iron from Stock.
CRANE CHAIN AND CABLE MAKER.
CONTRACTORS' PLANT, RAILS,
WROUGHT AND CAST WHEELS AND AXLES.
WAGGON IRON-WORK, PEDESTALS, &c.
AND EARTH WAGGONS COMPLETE.

CAST-IRON RAILWAY CHAIRS, WROUGHT CHAIR-SPIKES, FISH-BOLTS, AND RAILWAY STORES.

MATTHEW T. SHAW, 64, CANNON STREET, LONDON BRIDGE, E.C.

Orders requiring Despatch and Punctuality can be executed in a few days.

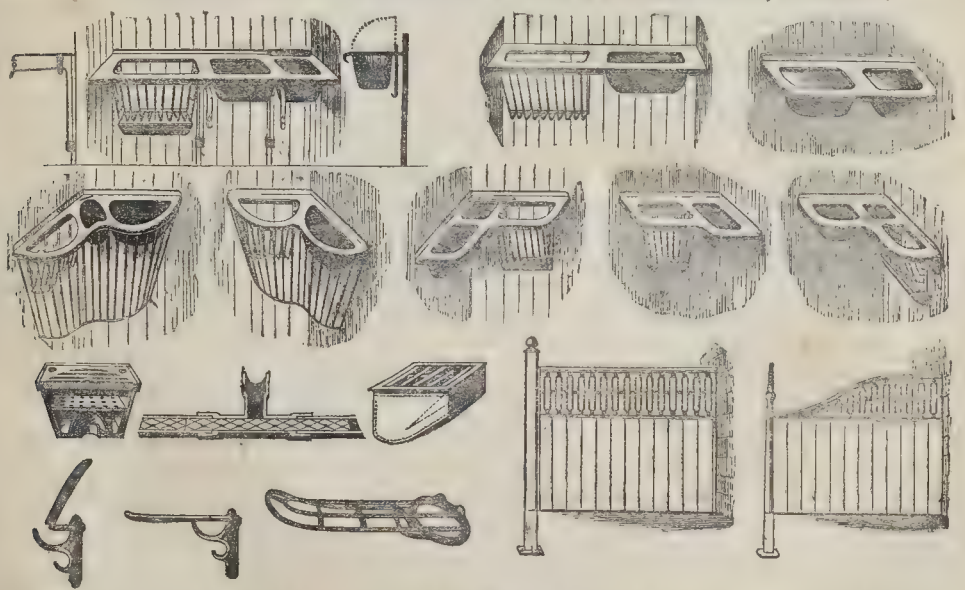
THE PRIZE MEDALS,

LONDON, 1851. PARIS 1855. LONDON, 1862.

AWARDED TO

COTTAM & COMPANY,

No. 2, WINSLEY-STREET, LONDON, W.

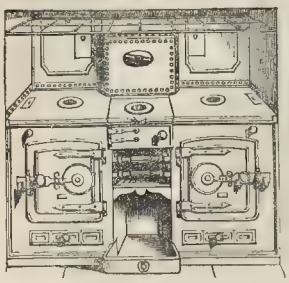


FOR PROGRESSIVE AND GENERAL IMPROVEMENTS IN

STABLE FITTINGS AND HARNESS BRACKETS.

ORIGINAL INVENTORS OF THE PATENT ENAMELLED MANGER, WATER TROUGH, AND RACK, FITTED TOGETHER AS ONE FIXTURE.

PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS, AS WELL AS BY THE PRINCIPAL NOBILITY, GENTRY, AND HUNTING ESTABLISHMENTS IN THE KINGDOM. IN USE AT HER MAJESTY'S STABLES, ALDERSHOTT.



The above, and every Fitting appertaining to the STABLE and HARNESS-ROOM, arranged for inspection in full-sized Stalls, Loose Boxes, &c. (a portion of COTTAM and CO.'s extensive Warerooms being devoted entirely to that purpose).

ILLUSTRATED DESCRIPTIVE PRICE CATALOGUES free, on application to

COTTAM and COMPY. ENGINEERS and IRONFOUNDERS, 2, WINSLEY STREET, OXFORD STREET, W.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

N.B.—Winsley Street is the Street opposite the Pantheon.

FENDERS, STOVES, FIRE-IRONS, AND CHIMNEY-PIECES.

Buyers of the above are requested, before finally deciding, to visit

WILLIAM S. BURTON'S SHOW-ROOMS.

They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and General IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments, 3*l.* 15*s.* to 33*l.* 10*s.*; Bronzed Fenders, with standards, 7*s.* to 5*l.* 12*s.*; steel Fenders, 3*l.* 3*s.* to 11*l.*; ditto, with rich ormolu ornaments, from 3*l.* 3*s.* to 18*l.*; Chimney-pieces from 1*l.* 8*s.* to 100*l.*; Fire-irons, from 2*s.* 3*d.* the set to 4*l.* 4*s.* The Burton and all other Patent Stoves, with radiating hearth-plates.

WILLIAM S. BURTON'S GENERAL FURNISHING IRONMONGERY CATALOGUE

May be had gratis, and free by post. It contains upwards of 500 illustrations of his illimitable stock of sterling Silver and Electro-Plate, Nickel Silver, and Britannia Metal Goods, dish-covers, hot-water dishes, stoves, fenders, marble chimney-pieces, kitchen ranges, lamps, gaseliers, tea trays, urns, and kettles, clocks, table cutlery, baths, toilet ware, turnery, iron and brass bedsteads, bedding, bedroom cabinet furniture, &c. with Lists of Prices and Plans of the Twenty large Show-rooms, at

39, OXFORD-STREET, W.; 1, 1A, 2, 3, and 4, NEWMAN-STREET; 4, 5, and 6, PERRY'S-PLACE, and 1, NEWMAN-MEWS, LONDON.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

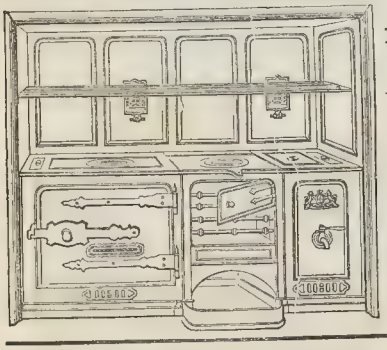
PATENT ENAMELLED TOP PLATE MANGER, WITH RACK AND WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS



Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

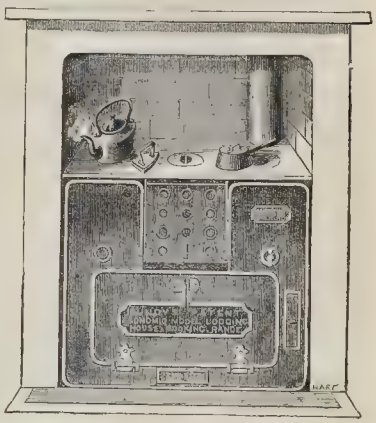
RANDAL STAP, Contractor,
No. 32, KING WILLIAM STREET, E.C.

Where numerous Drawings and Photographs may be seen.



N.B. The Iron Buildings manufactured by R. STAP are not fixtures on Leasehold Property.

CUNDY'S MULTUM IN PARVO ECONOMIC POOR MAN'S KITCHENER.

WHEN OPEN.

These drawings represent a Stove of the following dimensions:—24 inches long, 24 inches high, and 15 inches deep, when used as an open fire-stove, and also when closed, for BAKING, BOILING, and IRONING. The oven, which is placed underneath the fire, is 18 inches long, 14 inches deep, and 11 inches high. The flue passes all round the Oven, and the Boiler will contain six gallons of water. This Stove, which is also made 30 inches long, 26 inches high, and 15 inches deep, is admirably adapted for BACK KITCHENS, as an auxiliary Cooking Stove, and for STILL-ROOMS, NURSERIES, and SMALL HOUSES, the consumption of coal being only 112 lbs. per week. This Stove, also Cundy's Patent BRICK OVEN Double Fall-down Bar KITCHEN RANGE; also Cundy's Warm-Air Ventilating Stove, suitable for CHURCHES, HALLS, STAIRCASES, and SCHOOLS, for which invention Mr. Cundy received the SOCIETY OF ARTS MEDAL, also a Medal from the Royal Commissioners of the GREAT EXHIBITION of 1851, can be seen in operation daily, at the Show-rooms of

WHEN CLOSED.

RICKET'S & HAMMOND'S VENTILATING GLOBE LIGHT,

combining an agreeable method of lighting, with convenient simple, and efficient ventilation.

The advantages obtained are these —
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR,
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.
A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.

COTTAM & CO. IRON WORKS,

2, WINSLEY-STREET, OXFORD-STREET, LONDON, W.

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.

AUSTIN'S IMPERIAL PATENT SASH

and BLIND LINES.

To BUILDERS, CARPENTERS and BLIND MAKERS

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES

of which he is now making four qualities, and he strongly recommends that all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ironmakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

ESTABLISHED 1774

BUILDINGS AND SHIPS EFFECTUALLY SECURED AGAINST LIGHTNING.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. When they say they use the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS – Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

Also as to the Tuning, &c. of Organs in all parts of the country. Church Organs of any size built, enlarged, or revoiced, as well as removed and WAREHOUSED DURING RESTORATIONS. PRIZE MEDAL, 1851.

HAY'S PATENT WATERPROOF GLUE and INDIA-RUBBER VARNISH.—To ARCHITECTS, BUILDERS, PAPER-HANGERS, &c. &c.—The WATER-PROOF GLUE is a special anti-damp, and is suitable for contractors, joiners, cabinet-makers, &c. &c. The VARNISH for damp walls, previous to papering, coating zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Booth, contractors, Gosport:—

"We have repeatedly used your Waterproof Glue as a preventive against damp, and have found it most valuable in preparing walls to receive paper. In one instance, where the walls were thoroughly saturated with moisture from earth filled against the outside, we used your varnish internally, and arrested the suffering, within a few hours of its being applied, will complete success. We have also used your preparation for coating a large number of cast-iron piles, at the boatwharf, Portsea, for her Majesty's War Department."

To be had from all Ironmongers, Oil and Colourmen, &c.
Manufactory, Chandos-street, Portsmouth: Mr. GEORGE WEEKS, Manager. GEORGE CLARK WARDEN & CO. General Agents, 13, London-street, London, E.C. where specimens of its application can be seen.

IMPORTANT TO ARCHITECTS, BUILDERS, DECORATORS, AND OTHERS.
CAST WORK CENTRE FLOWERS, SHOP FRONT TRUSSES, VASES, ROYAL ARMS, CAPITALS,
And every description of ornament for internal and external decorations, executed in Plaster, Carton Pierre, Composition, and every kind of Cement, at reduced prices.
MESSRS. HERBERT, MODELLERS, 242, EUSTON ROAD, ST. PANCRAS.

VENETIAN BLINDS should have LEWTAS'S NEW PATENT ACTION which ENTIRELY DISPENSES the HOOKS and annoyance of winding the cords. Can be easily fixed to old blinds. Price, 2 cord actions 2s.; 3 cord do. 3s. A liberal commission to the trade. To be had of—
EDGAR PARKS, Ironmonger and Sole Agent,
140, Fleet street, London.

ELLIOTT, BROTHERS, Opticians to the Government, 30, Strand, beg to give notice that they have been compelled to REMOVE temporarily to 47, CHARING CROSS, their late premises being suddenly required by the Charing Cross Railway Company.

PANTILES.—TO BE SOLD, 15,000 PANTILES, delivered at Devonshire-street Station, Great Eastern Railway.—Apply to A. TUCK, Brick and Tile Works, Ingatestone, Essex. Plain Tiles, Chimney-pots, and Moulded Bricks in great variety.

PAIR of Horizontal High-Pressure and Condensing STEAM ENGINES, each of 25-horse power, for SALE, by Private Contract. The cylinders are 1 foot 8 inches in diameter, 5 feet stroke, with metallic pistons, bright connecting rods, slide valves, eccentrics, 8-inch fly-wheel, shaft crank, cast-iron fly-wheel 14 feet diameter, spur mortise wheel 8 feet diameter, and pinion; exhaust pipe, cast-iron condenser, cast-iron frames, steam and vacuum gauges, pair bright governor balls and apparatus. Made in 1851.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter street, London, E.C.

BRICK and TILE MACHINES, which have obtained ten Prizes from the Royal Agricultural Society of England, the Prize Medal at the Great Exhibition in London, in 1851; Paris, 1855 and 1856; also, Royal Agricultural Society of North Germany, 1858; and Universal Exhibition of Rotterdam, 1858; and obtained two Medals at the International Exhibition last year;—may be had from the Manufacturer, JOHN WHITEHEAD, Preston, Lancashire.

VALUABLE PATENT RIGHTS FOR SALE.
BUNNETT'S SELF-SUPPORTING HOLLOW BRICK FIRE-PROOF FLOORS, ROOFS, &c.
They are safer, lighter, and cheaper than any others, and have been successfully introduced in London and different parts of the kingdom, and most satisfactory testimonials received from eminent architects. Also,
BUNNETT'S CRITERION PATENT CONTINUOUS FEED BRICK, TILE, AND SANITARY PIPE MACHINE FOR STEAM OR HORSE POWER.
Which will produce, of superior quality, one third more in quantity than any other machine of the same cost and working expenses. The above Patents will be sold together or separate, and are suited for private enterprise or a public company.
For prospectuses and further particulars apply to Mr J. BUNNETT, Engineer, Deptford, Kent.

TIMBER CARRIAGE (two-horse) FOR SALE, in good condition; also, a CART, suitable for a builder, and several sets of CART HARNESS. Apply at 37, Dean-street, Soho-square, W.

TO SURVEYORS and OTHERS.—TO BE SOLD, for two-thirds its value, a very superior five-inch EVEREST THEODOLITE, quite new.—Address, A. B. 13, Margaret's-terrace, Lordmere-road, Walworth, S.

SCAFFOLDING for SALE.—Apply by letter to Mr. BURNS, Office, Morpeth-terrace, Victoria-street, Westminster.

CARTS, LADDERS, BARROWS, &c.—GEORGE ELL, Manufacturer of Carts, Vans, Waggons, Trucks, and Implements for railways, town use, agriculture, and exportation, CONTRACTORS', BUILDERS', and DECORATORS' TRADE UTENSILS.
G. E. has constantly on hand a Stock of CARTS BARROWS, LADDERS, TRESTLES, STEPS, &c.
DOBBIN and other CARTS, specially adapted for exportation, with Wrought-iron Wheels.
SCAFFOLDING, LADDERS, BARROWS, TRESTLES, STEPS, &c. LENT ON HIRE.
Price Lists on application.
GEORGE ELL & CO.
EUSTON WORKS, 366 and 368, EUSTON-ROAD, N.W.

TO BUILDERS AND OTHERS.
TARPAULINS for COVERING WORKS. SCAFFOLD AND HEMP ROPE FALLS. AWNINGS FOR FOUNDATION STONES.
CARY & PRIER,
DE BEAUVOIR FACTORY, SOUTHGATE ROAD, N.

TARPAULINS, MARQUEES, &c. for SALE or HIRE.
SCAFFOLD and HEMP ROPE FALLS.
H. PIGGOTT,
59, Bishopsgate-street Without, E.C. Manufacturer, by appointment, to Her Majesty's Honourable Board of Ordnance.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter from SIR RAYMOND JARVIS, BART. VENTNOR, ISLE of WIGHT:—"March 10th, 1862.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first having down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

INDIA-RUBBER MILL BANDS, WASHERS for Steam Joints, HOSE PIPES and FLEXIBLE TUBING.
A STOCK OF THE ABOVE ALWAYS ON HAND.
JAMES LYNE HANCOCK,
VULCANIZED INDIA-RUBBER WORKS, GOSWELL-MEWS, GOSWELL-ROAD (opposite Spencer-street), LONDON, E.C.

The Builder.

VOL. XXI.—No. 1049.

Windsor and London decked and illuminated.

NOTHING has been spoken of or thought of since our last but the marriage of the Prince of Wales and the Princess of Denmark. London, not to say England, has displayed its loyal and loving enthusiasm in a manner unexampled, and has bowed itself before the frank winning smile of the Princess who is to make our Queen's son happy:—

> "More potent that fair Danish bride,
> In spring-tide joy and charms,
> Than all her valiant sires of eld,
> Who sought our land in arms."

Money has been spent lavishly and gladly. London decked for its holiday was a sight to remember. In parts the decking was far better done than has been heretofore the case. The Corporation architect, as we will point out more particularly presently, was specially successful. Temple Bar would cry when it is undressed, and London Bridge refuse to take off its fine clothes and give up its arch ways, if they had a full perception of the improvement made in their appearance.

It is a pleasant thing to see a people happy, and a good thing to make them so. Without saying absolutely and unqualifiedly,—

> "The greatness that would make us grave
> Is but an empty thing.
> What more than mirth would mortals have?
> The cheerful man's a king;"—

we are quite ready to assert that mirth is a valuable thing, and a necessary thing. The multitude need these occasional jollifications and outbursts of feeling to balance sad realities; and as to the cost compared with the numbers amused, lightened, made more contented, and raised in self-esteem, it is not to be talked of. Divide the amount that has been spent in the United Kingdom on the present occasion amongst the millions who have been pleased and benefited, and 6d. a-piece would fully cover it. Moreover, five-sixths of this is not spent: it is but circulated. But why talk of cost at all? The nation, as a nation, is advantaged to an extent beyond price, by thus bringing together the people in sentiment, and their common action under guidance of kindly feeling;—uniting, refining, and consolidating. Our gracious Sovereign has reason to be proud of her people. She knows very well the people are proud of her.

Amidst the harmony one discord makes itself heard. The chorus of praise is disfigured by one strain of condemnation. The City police broke down; broke down so thoroughly, quite irrespective of the doings of the Volunteers, that if the gentleman who had control that day should be a candidate for the office of Chief Commissioner, care should be taken to prevent him having it. Nor can we say much for the cleverness of the Metropolitan police in some parts. If we knew the name, for example, of the inspector who had command in the Strand, at the end of Villiers-street, we would gibbet him, *pour encourager les autres*. The unnecessary, disgraceful, and dangerous crushings which took place there, caused by the constant arrivals by steam-boat, and otherwise, behind, might have been remedied in the easiest manner, as was pointed out to him on the spot. The advice, however, was pooh-poohed and disregarded. Arrangements for the traffic on Tuesday night there seemed none, excepting on the handbills. At half-past seven in the evening there was a dead lock in the wide road leading to Hyde Park Corner, and it took one hour and a half to reach Park-lane. In short, movement was impossible. The police were impotent. Surely there must be minds in the kingdom capable of arrangements to meet such circumstances if they were sought for.

Something should be learnt from what was seen on Saturday and Tuesday night, when the crowding was such that lives were lost and the limbs of thousands were placed in jeopardy. It was a wonderful sight to view this vast multitude; to see how the heart of the metropolis became choked by the people who, in this fever of loyalty, flocked from all directions towards the points of interest;—from Islington, St. Pancras, Marylebone, Westminster, Whitechapel, and all the large eastern districts. Streams, and in some thoroughfares rivers, of people moved towards London Bridge, King William-street, the neighbourhood of the Royal Exchange, Cheapside (for ages famous in connexion with the pageantry of one of our most important and ancient corporations), St. Paul's-churchyard, Ludgate-hill, and so to Fleet-street and the obstruction at Temple-bar.

To these narrow and insufficient arteries for such an extent of traffic, the people on the Saturday's holiday for the most part wished to come, owing especially to the circumstance that in the City the best sight was to be seen.

If the City part of the procession—which might with advantage have been shortened—had been allowed to pass to Paddington, with the addition of the Westminster and Middlesex authorities, the dangerous crowding which took place between London Bridge and Temple Bar would have been avoided. At some points the pressure was dreadful, and it seems wonderful that there did not happen some dire and fatal accident. Not only were the streets along the line of route densely packed, so that it was, in parts, almost impossible for carriages to pass, but in all the side streets, as far as the eye could reach, surged countless multitudes. This Royal Progress was an exceptional case; but to a great extent the congestion of the City arteries is a matter of almost every-day occurrence, and the evil, we fear, will not be much abated at certain points when the system of City railways has been carried out.

It was a curious sight to witness the dispersal of the sightseers after the procession had passed,—to see in the narrow avenues which lead from the central road the scenes of over-crowding and stoppage renewed. On the illumination night the crushing at Temple-bar was terrible, and clearly showed how necessary the removal of this barrier without delay has become: it is always in the way, and on ordinary days causes the blockade of Fleet-street sometimes for an hour together.

It is not our province, fortunately, to chronicle the week. This has been done already by the daily press in a marvellous manner,—showing strikingly as well their good organization as the amount of talent engaged in this department of literature. Some of its incidents, however, call naturally for notice in our pages. Thus it is but right that the *Builder* should give praise for the manner in which the temporary Reception-hall at the west-end of St. George's Chapel, and the various rooms opening out of it for the Bride, the Bridegroom, the Bridesmaids, and so forth, were erected, decorated, and furnished in less than four weeks,—praise that belongs to the officers of the department under whose direction the works were executed (Mr. Starie, head of the department; and Mr. Turnbull, clerk of the works); Mr. Myers, the constructor; and Mr. Arthur, the decorator. The hall, decorated with emblazonments, on an oak paper, the best we have ever seen; the woodwork stained, and the walls hung with a chocolate green and gold paper, had no aspect of haste or slightness about it. The retiring-rooms were charmingly fitted up; especially the Bride's, with its hangings of pink and lace; and the whole were pleasantly warmed with an apparatus by Price. It was a great fight against time, but no traces of the struggle were visible. The nave of the chapel was fitted up with seats covered with red, tier above tier; and, when these were filled with elegantly-dressed persons, the floor occupied by the procession into the choir had a magnificent aspect. It was in the choir, however, that the effect culminated; every person in it being splendidly attired. Clayton & Bell's new window, already described, accords well with the old building, without displaying outrageous archaicisms. It is rich without being garish, and grave without being dull. The expense of this window, as well as that of the reredos below, which forms part of the memorial of the Prince Consort, will be borne by the Dean and Canons. The reredos is as yet in an unfinished state, the portion at present undertaken being, as far as relates to its width, a continuation to the floor of the central division of the window above. We have engraved a view of it as it appears.* Its principal features, it will be seen, are three niches, containing subjects in alto-relievo. The central niche, which agrees in width with the three middle lights of the window, contains a relief of the "Ascension;" and the other two (agreeing each in width with two lights of the window), contain respectively representations of the *noli me tangere*, and of our Lord appearing to His disciples. The remaining four niches are not as yet undertaken. The reredos is executed in alabaster; and the details are of great richness; agreeing in character with the architecture of the chapel. The portion at present erected is not yet quite perfect, the plaster models only of the two smaller reliefs being at present erected; and the central relief, though executed in alabaster, not being quite complete. The whole has been carried out by Mr. J. Birnie Philip, under the direction of Mr. Scott. Above the table mosaics are introduced; and hereafter gilding will be used to heighten the effect. The groups are very good. In the canopy work the natural markings in the alabaster interfere considerably with the mouldings and carvings, and serve to confirm an opinion we have long entertained, that alabaster of this kind is not a good material for such works.

The "Queen's Closet," we may mention, on the north side of the altar, was opened to some extent, the floor being raised so as to render Her Majesty visible. A private covered way to it from the north terrace and through the deanery had been constructed, by means of which the Queen quietly took her place.

The Wolsey Chapel is being proceeded with: the vaulting between the groins is formed with layers of tiles ready to receive plastering.

Externally, the Curfew tower has been restored, and on it a lofty roof, containing dormers, is being erected. This will materially improve the general outline of the castle, as seen from the Great Western Railway and other approaches.

The decorations in Windsor were of course very extensive, including festoons from poles on each side of the road from Eton-bridge, for a considerable distance; an arch at the entrance to the town, designed by Mr. Croydon; and a much larger arch close to the entrance to the Castle, erected by Messrs. Wellman & Hollis, under the direction of Messrs. Edginton & Tait. The latter includes Corinthian columns, a very high attic of all sorts of forms, vases, flowers, banners, and paintings. It has been stated positively that the Prince of Wales was so much pleased with this arch, that his Royal Highness had expressed his intention of having one erected in stone after the same model. We take for granted this is not

* See p. 189.

correct. The arch as a temporary erection answered its purpose well enough; but, perpetuated in stone, it would be a lasting eyesore and discredit. The arch at Eton was designed by Mr. Evans, of that place, a well-known member of the Old Water-Colour Society, and was very satisfactory. At Slough, too, there was a handsome floral arch: in fact, every step of the way from Gravesend to Windsor, and thence to Osborne, there was but one desire evident; so that the Princess will readily believe that the Laureate shadows forth the universal feeling in singing,—

> "For Saxon or Dane or Norman we,
> Teuton or Celt, or whatever we be,
> We are each all Dane in our welcome of thee,
> Alexandra!"

Whatever may be said of the aptitude of our race in work of art, the demonstrations of Saturday and Tuesday last were sufficient to show that efforts in the line of decoration and ornament are means of expression of the feelings, which are means as natural as words and noise. That it should be necessary for us to often reassert that such efforts are to be considered thus, and of the nature of things which therefore are to be taken into account, as well by public men and governments, as by inquirers into the constitution and operations of the human mind, and seekers of the public good, is one of the curious points in the British organization and system, which are anomalous, or hard to be accounted for, contrasted as the feature is yet, and markedly, with the system in many of the continental states. It is however necessary to assert that if a people like the English, estimating them as we may, be unable to produce good art, such people will exhibit something that is bad, and which will not merely render us the laughing-stock of foreigners,—the only point, beyond the newly discovered commercial value of the thing, which we seem to care about,—but which will involve the deprivation to us of a large amount of something that was beneficently meant, like everything that presents itself to us as beautiful in the natural world, and like every faculty that we possess and use, that is to say meant for our advantage and even gratification. It is a mistake to suppose that the public *fêtes* to which we have alluded as those in which art habitually assists, are only devices of despotic governments to occupy the popular mind, or that the enormous cost of them is justifiable on no other ground. We are persuaded that beyond any art-hints that the particular decorations on each of these occasions may afford directly, the combined spectacle assists in creating and keeping up that singular aptitude and fertility which certainly form a characteristic of the French in their art-manifestation, and an essential of art everywhere that is good.

The demonstration of Saturday last, with one or two signal exceptions, was characterized by quantity rather than quality of the effort in the way of art. The popular voice; the work of British hands, done at the dictation of British hearts; the multitude; and the effort to display something figurative of abundant "Welcome" to one, and the heartfelt wish for the happiness of both, were everywhere; but the beautiful in form and colour, or taste, contributed throughout the line of route on Saturday, distressingly little. We did not, indeed, see the arrangements at Gravesend, which the newspapers have praised. The Gravesend decorations were not quite complete at the moment of the arrival of the Princess; but, if not as designed, from having been *designed*, they started with an advantage constituting one point at least in success. The decorations within the Bricklayers' Arms Station we were not allowed to see, by the discourtesy of the officials of the South-Eastern—a Company whose system our readers have before heard of as peculiar. The arrangements at the Paddington Station were directed chiefly, as they were very efficiently, to affording a large number of persons a view of the departure for Windsor.

Between the London stations, the whole seven miles' line followed by the procession, exhibited, if we except London Bridge and Temple Bar, in the decorations, everywhere profusion, but scarcely anywhere, taste. Out of the two or three thousand houses that must have been passed in such a journey, very few of which did not attempt some visible form of demonstration, and including the clubs, scarcely six of the number were not rather shocking to the eye, than in any degree beautifully adorned. Passing with the procession along Great Dover-street, and through the Borough, with the recollection of scenes of public rejoicing on the Continent, and making every allowance for assertion that what is done in the former case is the people's work and spontaneous, and in the latter case, is the work of the Government, we could not help being saddened at a difference, and an inaptitude of our countrymen after now some years of home teaching, and of the opportunity for comparison which extended intercourse with foreign nations affords. For, it is observable amongst the class of French workmen, who might correspond with that inhabiting such streets as lie adjacent to the Bricklayers' Arms, that the aptitude for art, if not success, is always manifested. As the procession passed through the city of London, and beyond Temple Bar, difference from the preceding streets was perceptible chiefly in the number, size, and prominence of the flags, which in our recent demonstrations we have learned to hang over the middle of the street, and observable in the mottoes and other forms of expression of good will. Throughout the route to Paddington, the want of harmony of colour in every decoration, except some three or four, would have furnished argument such as we confess we never before credited the existence of, to those who say that the perception of such harmony is not in our race. For the red which is one of the Denmark colours, was usually substituted a dirty Indian red; and blue was indigo, or telling almost as black; whilst these colours were exhibited generally in *glazed* calico; the whole showing that there had not been the smallest idea that the sort of red or blue that might be proper in one place, would be otherwise in another; or that colours with glaze, and the same dyes in non-reflecting stuffs, are different things. The end and aim seemed to be, the exhibition of red, white, and blue,—if the national hues, good,—if the right ones were not at hand, any others that might be. It did not seem to be suspected that effect of colours depended upon their combination, or upon the dexterous introduction of white and black. Great sinners in this matter of colour were the authorities of St. Paul's School, a case which we notice because that of a school, and because some of our contemporaries who may have been engrossed by efforts to protect themselves from the dangers of the route through the City, have spoken of it in language of praise which would be by no means deserved. The principal exceptions amongst the very limited number that we have alluded to, of instances of tasteful arrangement, were those of the premises occupied by persons habitually engaged in furnishing and decorating. Messrs. Banting's premises, in St. James's-street, may be quoted as one of the chief of these examples; although the blue, in this case light-blue, was somewhat too great in quantity, and the design was best in the arrangement of the festoons of leaves. The premises of a well-known firm of decorators at the corner of Jermyn-street, also might deserve to be indicated as successful in colour; and a small front lower down, where the banners were grouped with some degree of taste, was almost the only instance of variation from the form of a flag flying from a pole or from a cord stretched across the street. In Paris, on the occasion of the Emperor's *fête*, the Hôtel de Ville is usually most beautifully decorated with flags, some of which may be flapping in the wind, but of which a majority are festooned, and crossed or grouped in the window openings. With the Paris municipality, however, matters of this kind connected with the *fêtes*, are the duty of a constituted department to which an architect is attached, as always such an officer is in France to the direction of matters in which art is concerned. Indeed, ample professional assistance is brought into use; whilst trades exist devoted to the furnishing and carrying into effect of the designs of those who are truly artists.

We must applaud the City of London for the effort that they have made this year, and Mr. Bunning has shown now and previously, ability in the department just now under consideration, of his profession. His work has, however, been limited to four sites, which though important, became small in proportion to the attempted effects of the whole line of route. The galleries along the east and south sides of St. Paul's Cathedral were not amongst those of which the strength might have proved inadequate, and they were cleverly contrived so as to be removable easily, and with as little loss as possible from cutting of the timbers. The cornice, however, should have been more effective, and the flags might have grouped with an effect that was not realized from number. Numerous indeed they were. The medallions and Prince of Wales's feathers, here and at the Mansion House, and used elsewhere, were but coarsely modelled. The decorations on the bridge were well designed. The sculpture supplied what is wanting to London Bridge as to other bridges in our metropolis; and the effect of the group of figures on each of the end pedestals will, we trust, point the way to a completion of this and other bridges by the addition of groups of some kind, in the case of the pedestals at the ends, if not those which are over intermediate piers. The figures represented Fame, according to descriptions of the sculpture and decorations; but wanting the trumpet, each figure resembled Peace rather than Fame. These figures, which were only casts, were creditable to Mr. Brucciani, who supplied them with other sculpture. Left white, the shadows told in them in a manner to show that plaster, when quite new, has a particular advantage; one, however, which we are not certain would be admitted by sculptors as pertaining to it. It may seem by no means possible to preserve the white or render the plaster durable in the open air; but such casts might, we think, be hardened, so as to preserve the effect, and fit them to play an important part in the decoration of interiors, where casts which have been painted for their preservation certainly fail to produce anything like the same result.

Each pier of London Bridge on the occasion of the reception on Saturday, was surmounted by a tall pedestal, similar to those at the ends of the bridge round which the figures were grouped, partly backed by crimson cloth covering the dado. The pedestals of the intermediate piers, had however only one figure in each case, instead of four figures. Consequently, as the cornice of all the pedestals was the same, and was broken into four bold projections which had the appearance of being intended to correspond with four heads of figures, the pedestals were not all so satisfactory as they would have been, had some been treated differently. Each pedestal bore the figure of a Danish warrior in armour holding the "Danebrog," the national flag of Denmark. Without the standards that were fluttering in the wind, these figures might have been too small for the pedestals. They were in plaster, coloured, or some material representing metal. The cornices of the pedestals were furnished with numerous gas jets and globes, for the purpose of the illumination; but, on Tuesday, this part of the arrangements did not prove very successful so far as the bridge itself was concerned. Between the pedestals were lofty poles covered with red cloth, and surmounted with gilded ravens and elephants, the national emblems, and bearing large pennons, red with the white cross. Each of these staves carried moreover at the foot, a portrait of a king of Denmark in a circular frame. The painting, which resembled sepia, was too cold. Between the flags were bronzed tazzæ or tripods, in which a perfumed substance like incense, prepared by Mr. Rimmel, was burnt on the occasion of the reception, and in which *lampions* were lighted on the night of the illumination; but these last did not burn very well. The decoration was completed by flags and shields grouped on the lamp-standards. The arch at the north end of the bridge was a simple arrangement of three openings, with eight Corinthian columns attached on each face to the piers, and a centre rising higher than the sides, affording space for a painting, and surmounted by a curved pediment, on which was a large group of Britannia, in a chariot with four horses, and sedent figures, representing each Fame with a silver trumpet. The painting facing the bridge represented Britannia, surrounded with sea gods and goddesses, escorting the Princess to England; and on the night of the marriage this was replaced by a transparency symbolizing the riches of earth, air, and water, and representing the Princess in a chariot drawn by animals, somewhat after the manner of Rubens's paintings. Both these works were very well painted, as also was one which appeared on the other face of the arch on the illumination night, and which appeared to represent Canute on the sea-shore. A crowd of allegorical figures were floating on the waves. This space was occupied on the previous occasion by a painting, representing a portrait of the Queen, with a crown above, and figures of Wisdom and Strength as supporters. The general structure was white, whilst the capitals and mouldings were gilt, rich draperies were suspended from the entablatures, which last also carried medallions, replaced on the illumination night by transparencies, portraits of the Prince and Princess; and upon the entablature and columns were the arms of England and Denmark, and figures of the Danes, Saxo-Grammaticus, the historian; Holberg, the poet; Thorwaldsen, the

sculptor; and Juel, the painter; whilst in the tympanum of the pediment facing south, was the motto slightly adapted from Shakspeare:—

> "Honour, riches, marriage, blessing,
> Long continuance and increasing,
> Hourly joys be still upon you:
> England showers her blessings on you."

The words were not so legible by day as at night, when the whole structure was illuminated by globular lights along the cornice, and by the light around, and when the whole had certainly a good effect. Besides Mr. Brucciani, Mr. F. Fenton and Mr. Absolon have contributed to the realization of Mr. Bunning's designs.

The decorations of Temple Bar, though not wanting in taste, were chiefly, rich and novel. The structure was entirely concealed, though the curved form of the pediment was repeated. The mouldings painted of light colour, were encircled with gilt ornaments, in which the letter A was repeated, and the tympanum was filled with a rich mauve-coloured stuff. On the pediment was a small figure of Hymen, and tripods. From the entablature, a rich tinsel or tissue material, having the appearance of cloth of gold,—and *semé* with hearts crimson,—was suspended, leaving a slight opening, so that it appeared somewhat as the hangings of a tent. At the sides, altars; and figures, outstretched, holding orange-blossom, completed the upper part of the arrangement. The lower part afforded little space for decoration on the piers: the passages were, however, lined with red cloth, whilst hangings were suspended from a cornice or entablature. Medallions and coats of arms occupied central positions on this entablature, and that in the upper part of the composition.

A large arch, of classical design, with columns, spanned the High-street in the Borough, but the details were inelegant; and not much more, that we know, can be said of one that the procession passed under in Grand Junction-road, Oxford and Cambridge Terrace; though, as we had to hurry through it, the details which were "nondescript," have faded from our recollection. Yet another arch was there: it was in the Edgeware-road: it was exceedingly simple in form, composed of little more than rough boarding, on the framework, with perhaps some addition of evergreens. It was most remarkable for the ornamentation, which had evidently been quickly stencilled on, and must have "hailed" from somewhere in the temporary portions of the buildings occupied and decorated by the Department of Art at Brompton.

The decorations of the Mansion House consisted chiefly of a covering of crimson cloth to the shafts of the columns, which rose from the temporary gallery; of similar coloured drapery, with chrome-yellow bordering and ornaments covering the pilasters and suspended from windows; of medallions and feathers placed upon the columns, and of festoons of green leaves with red flowers and chaplets suspended from the capitals. By night the effect of light and colour was fine. The architraves of the upper ranges of windows, the cornice and raking lines of the pediment, and two of the lines of mouldings of the attic, were marked by gas; whilst the City griffins on the angle pedestals of the attic, and tripods on the intermediate pedestals containing *lampions*, that were of little use, however, in the damp night, added an element of effect in form, to the building, which should show the necessity, artistically speaking, of placing something of similar form on these pedestals, and to be permanent.

The illuminations in this part of the City, displayed an amount of taste which certainly was not surpassed by those at the west end of London; though perhaps the principal structures were not very differently treated from what they were on the night of the Peace commemoration. The effect of the Bank, arising from a line of gas along the main cornice, insignia and letters appropriate to the occasion as a centre, and the symmetrical disposition of several large and small stars along the upper portion of the front, was remarkably fine. So was that of the Exchange, with the columns spirally encircled by small oil-lamps, a small festoon of light to each capital, the inscription of the pediment reproduced as a frieze, and the raking lines of the pediment lighted. The sculpture, however, did not stand out; so that the chance of a more beautiful effect than that of the sculpture in the Mansion House pediment, was lost.

Some days before Saturday last, the porticos of the Royal Exchange and the Mansion House were greatly improved by washing them by the steam fire-engine, a method of cleansing previously in use for many years at the Bank, and to which we have sometimes referred. If the method would be as successful generally as it has been in the cases mentioned, the sooner it is applied to other buildings in London, the better for architecture, and the public perception and appreciation of that art. We cannot see how there can be injury from the syringing, to any stonework but that in which decay has previously commenced, and from which the first action of weather would detach the particles; and one to whom we first owed the suggestion, Mr. C. H. Smith, an authority, has not, that we have heard, changed his opinion on the subject.

Amongst the buildings near the Bank, deserving to be mentioned for the effect produced, were the Bank of London, formerly the Hall of Commerce,—where outlines of the windows and the panels, the line of the cornice, and the angles of the building, were marked by gas,—and the Sun Fire Office, which had a line of gaslight along the base of the order that forms the upper part of the building, festoons of light from the balconies, and small stars repeated symmetrically on the balconet railings. This symmetrical arrangement of points of light becomes itself a beauty, and combined as in the chief examples quoted, with the illumination of the lines of the architecture, is far more successful than the tiresome repetitions of stars, or even initial letters. Guildhall was lighted in this way; all the window-openings, and even the angle-piers, being lined out, and producing a singular though not unpleasing effect in the peculiar architecture.

An attempt somewhat similar in principle, was made to illuminate the dome of St. Paul's Cathedral; though in this case oil-lamps, ship lanterns, were used. Twenty-four red lights, on the balustrade of the order, appeared to encircle the base of the dome, and sixteen others, white, were placed at the golden gallery. Other lights were below the order; but they did not contribute much, and did not appear to be at regular distances. The electric light, which was to shine from below the ball, and upon the dome and western towers from other convenient positions, and which seems to have cost 200*l.* for the night, was not well managed when we were at either end of the cathedral, except for a moment, when it was apparent how beautiful might be the effect of architecture thus lighted. The other most important effort for the illumination of a public building, was that in the case of the Victoria Tower, where the roof and cresting were surrounded by rows of *lampions* burning luridly, but not successfully as to the effect of the tower itself, or the general illumination. The electric light from the Monument, if exhibited, failed to attract our attention. The Fitzmaurice light from the York column shone as on previous occasions, and the arches at Hyde Park Corner and Constitution Hill were surmounted by *lampions*. The Government Offices, and the clubs, were all lit up, but not very differently to their illumination on previous occasions. The Post Office and the Admiralty were remarkable rather for the quantity of gas they burnt, than for anything that here calls for notice. The window-openings and other lines of architecture were marked out in the front of Somerset House. But the best effect produced on this system was in the case of the Treasury Buildings. Here, however, in addition to the line of light along the cornice, there were three devices in cut glass of various colours. These, along with numerous other examples of the same kind of illumination, were executed by Messrs. J. Defries & Son. All were perfect works of facet-cutting, in glass, and putting together of lustres. Although the black box or border in which the light is generally placed, is sometimes unsightly, and art might be made to govern this sort of illumination more, the sparkling light is very beautiful, especially where as in some cases the electric or the oxyhydrogen light is the source of illumination. In most of the stars and other devices coloured glass was introduced. The most considerable effort was made at the portico of the National Gallery. Here there was a large quantity of coloured glass, besides white, and all of great beauty. The general design, however, might have been much better; and there was great difficulty in lighting up the whole. Some portion of the woodwork at one time caught fire. The supporting construction had involved much contrivance. The Trafalgar-square fountains were illuminated by Messrs. Defries, by the electric light, to which coloured effects were added. Amongst the Government buildings, as they appeared on the Saturday, the War Office would have deserved to be mentioned for its decorations. They consisted of lines and hangings of drapery forming architraves to the windows. In connexion with some private establishments, paper lanterns were used profusely, and sometimes with effect, as intersecting Regent-street, between the premises of Messrs. Herbert Watkins, and Houbigant; and in the case of Mr. Beeton's premises, St. Clement Danes, Strand, where they were pleasingly grouped with evergreens and flowers.

Although we believe that demonstrations of the character of those of Saturday and Tuesday, may be worth considering in a different point of view from that of national rejoicing, we must repeat that if police arrangements cannot be such as to prevent great loss of life, and accidents such as have been more numerous and serious than those which the public have heard of, like attempts had better be abandoned, at least until London may possess thoroughfares better adapted in width, and otherwise better planned, for the movement of vast multitudes. Scanty as must be particulars which can be given in the space which we can devote to our subject, our notes were not procured without danger, not merely on the night of Tuesday, but on the previous Saturday through the City, and within the very line that should have been kept free for the procession. Even by the *metropolitan* police, representatives of the Press complain of having been rudely treated rather than protected. On Tuesday night however, women and children were trodden down in the narrow ways of Temple-bar, Ludgate-hill, the Poultry, and other parts of London, or were crushed by the carriages at such crossings as that of Bridge-street, Farringdon-street. The "good humour" moreover, in the crowd, which the journals praise, becomes often brutality: it means the worst conduct of the lowest mob, and the worst aspect under which *men* can be presented, that of selfish indifference to suffering, and injury done, to the weak and defenceless portion of humanity. A French author, Paul Féval, in a recently-published novel, "Jean Diable," describing the crowd and crush of Fleet-street at ordinary times, assumes to take the British view in saying, — No matter if some weak woman be *terrassée*, and trodden upon, you have to get on; "time is money," and you must keep your appointment in the City. It is matter of fact, that an illumination night in Paris can be passed through almost without accident, without crushing, and with perfect politeness and real *good humour*. There is more order there, and more real politeness and deference for others shown, on such occasions, than on any public occasion, whatever the class present, in England, and till we can do away with the justice of such an accusation as that of Paul Féval, we shall not rank as the nation that we ought to be and claim to be considered.

EXCAVATIONS IN ROME.*

WITHIN the last six months have been progressing the excavations begun about seven years ago, under St. Anastasia, at the north-western base of the Palatine. The subterranean remains here found belong to several quite distinct classes, some apparently connected with the Circus Maximus, others with the Imperial Palace, but most interesting are the massive remnants of fortifying walls in lithoid tufo. On descending we first see, by the custode's torchlight, an extent of outer building correspondent to the eastern side of the Circus, in compact brickwork for the most part, but on one side partly formed of immense blocks of the same tufo, evidently spoils removed from the ancient walls, and here pierced together without regularity. On the same side open several doorways with horizontal lintels and small square windows above: between the inner and outer fronts are remains of a pavement in very large stone blocks, probably enclosed by a more modern arrangement within the two lines of building when no longer serviceable. Entering through one doorway, we are in a suite of lofty chambers, mostly spacious, in different styles of brickwork from the earlier to the later imperial; in some places this contrast found on the same wall-surface, the immense scale of the tiles used in constructive archways, the length and perfect smoothness of the bricks, and narrowness of the cement strata being details noticeable in the best examples. These halls communicate by arched doorways, all in perfectly preserved brickwork; and below the imposts of the arches project, at each side, rows of marble brackets, regularly squared, as if to support brows or some species of ornament—a feature not common in Roman ruins. In some places we have glimpses of inner walls, divided by very narrow intervals from the outer; and one gap in the side of a chamber enables us to see three

* See p. 125, *ante*.

such parallel curtains of masonry in which more antique have evidently been sacrificed to later structures. At two different levels we reach those portions of the stupendous walls in lithoid tufo, the most valuable discovery yet made to throw light on the topography and justify the traditions of the "Roma Quadrata"—if we except, indeed, those discoveries yet incipient obtained through the works ordered by the French Emperor in the Farnese Gardens.

First is reached an enormous fragment, partly concealed by a double curtain of walls raised in front, one brick, the other travertine, in large quadrate blocks; and here the antique, the inner structure, is pierced by a doorway, only the upper part visible, with a horizontal lintel. Hence descending to the lowest level accessible, by a ladder, we see the principal extent of these fortifications, crossing one side of several small chambers thrown up against them, but not exposed down to their base, probably at considerable depth under the soil here accumulated. At regular intervals advance, at right angles with the principal line, other similar walls, perhaps belonging to square towers, raised in this system of defences as in that still surrounding Rome, the walls of Aurelian restored by Honorius. The perfect preservation of these newly-discovered walls, in every part compact, without one stone dislocated, and the enormous size of their tufo blocks, cannot be considered without admiration. Like other such Roman constructions without cement, their courses are placed in alternate layers of square and oblong stones, presenting in one course their sides, and in the next their ends, as seen in the extant remains of the Servian walls also; and the lithoid tufo used is that of reddish-brown hue, one of the three species mentioned by Vitruvius, found near the banks of the Arno, in the more immediate neighbourhood of Rome, and within the city, in quarries on the Capitol, the Cœlian, and Aventine hills. In another part of these excavated ruins we entered a lofty and ample chamber, opened by the labourers that very day; and the proximity of the other Palatine ruins may lead to the inference that here, as in other parts of the excavation under St. Anastasia, we are treading the halls of the imperial residence. A broken column of giallo antico, lately dug up, supplies an example of splendour of decoration which, now lying in a yard outside the church, has been destined by the Pope to serve for incrustations in the new confessional at S. Maria Maggiore.

The excavations on the Palatine, commenced November 1861, have been promoted with the activity we might expect in whatever is ordered by the Emperor of France; and since the discoveries on this site by Bianchini in 1720, by the Abbé Raucoureuil (owner of the Spada villa on this mount) in 1775, no antiquities have been found here to compare in importance with any one of those recently brought to light under the intelligent direction of Signor Rosa, who resides in the restored villa raised, with other decorative buildings, in the Farnese Gardens by Paul III. These gardens were long possessed by the Neapolitan Bourbons, without any step being taken towards promoting archæologic interests; nor could the Papal Government initiate anything on ground not its own. Within but a few days after the commencement of the new works was ascertained the precise limit between the region occupied by the imperial palaces and that covered by public or private buildings of various epochs; and from vestiges soon found it was assumed that the apartments preserved by the Cæsars for domestic uses could be distinguished in ruin from those for public and ceremonial purposes; the former on the more elevated ground towards the Forum and Velabrum, the latter ranging from the mount's centre to the south-eastern slopes opposite the Cœlian Hill. The areas immediately above the Forum and Velabrum are supposed by Signor Rosa to have contained no part of the imperial residence; but several other edifices, some sacred in character, belonging to the primæval Rome, whose vestiges, it may be hoped, will be brought to light by farther research. Towards the western side are two contiguous quadrangular halls of considerable dimensions, now represented only by substructure walls and inlaid marble pavements, each with an apse at the centre of its western boundary, and remains of niches at regular intervals along the brick-work walls; the portions of pavement still left in the finest porphyry, serpentine, and Phrygian marbles; and a variety of sculptured fragments in white marble, capitals, cornices, colonnettes, busts, are now seen on brick pilasters thrown up to display them; among these being noticeable two colonnettes with spiral fluting,—one double-shafted, supporting the funereal pine-cone; and two double-headed busts with male and female faces looking in opposite directions. In one of the uncovered halls is an elliptical fountain, with marble incrustations and vestiges of two orders of niches for statuary or reliefs, whose lower rank would have been partly immersed in the water; presenting effect beautiful indeed, as may be imagined. Near this was found the life-size statue of a winged Cupid, with quiver and arrows, apparently engaged in shooting from his bow, but unfortunately headless, and with all the limbs imperfect; still, however, in poise and general outlines, most graceful, and deemed worthy of restoration, for which the Emperor has commissioned a well-known German sculptor in Rome, named Steinhauser. Beyond these walls, which were ranged round a peristyle still recognisable, and which altogether covered a surface of 3,016 square mètres, opens, near the ridge of the mount above the Circus Maximus, a semicircular chamber, surrounded, like the others, by ample niches, which Rosa supposes to have served for those declamations of poets to courtly audiences often alluded to by classic writers; and another hall contiguous, of greater dimensions, he believes, may have been one of the several libraries in the imperial buildings, the latter being divided from the range behind it by a portico of Cipollino (Carystian) marble columns, now being restored with Corinthian capitals, and shafts rising 6 mètres. From the threshold of this graceful colonnade we look down into two spacious chambers, opening to considerable depth below this spot, built partly in *opus reticulatum*, but for the greater extent of massive squared stones, without cement, perfectly compact and uninjured, resembling the structure of the Tabularium on the Capitol, whose extant remains are of the year of the city 675, but not, like the latter, in *lapis Gabinus*, these walls being of the dark-grey stone found on the Cœlian Hill, and of antiquity at least higher than the time of Sylla (as Rosa infers); belonging, therefore, to some edifice anterior to all the imperial foundations. They are supposed to have stood, with other buildings, along a valley which cut through the mount in direction corresponding to that of the Via Sacra, and with the heights bounding it at each side formed an *intermontium* similar to that of such historic note on the Capitol.

Interesting, for topographic illustration of the Palatine antiquities, is the discovery of the road ascending from the Via Sacra, called Clivus Palatinus, part of whose pavement has been long visible near the Arch of Titus; and following its curving direction up the Mount, Signor Rosa came upon vestiges of the imperial gateway, on the site of the Porta Mugonia, in the fortifications of "Roma Quadrata," a discovery that may enable to determine the position of the celebrated temple of Jupiter Stator, known to have been in its vicinity. The site of the temple of the Palatine Apollo is now clearly shown to have been not, where former theories placed it, on the ground occupied by the halls and peristyle recently uncovered, but quite apart from this group of buildings,—perhaps, as Rosa conjectures, where the Villa Mills (now a convent of French nuns) raises its hideous front, nearly at the central terrace of the Mount. Important in the highest degree is the discovery of the Porta Romanula, identified in the gateway disencumbered near the north-eastern angle, above the Forum, which, hitherto placed by conjecture more towards the west, belongs also to the cincture walls of that "Roma Quadrata," certainly the primitive city. This we see, and may descend to, at a depth formerly covered by soil and ruin, the jambs and archivolt of brick masonry, well preserved, without any stonework, and to be regarded in its present state as a restoration, probably of the Claudian period. The ingress is still blocked up by earth not yet removed from the outer side; and the buildings referred to Caligula cross this gateway in oblique lines of wall, leading us to infer that its use had discontinued before those additions to the palace arose. Within, passing into the midst of these chambers, advances a road paved with large polygonal stones, recognized as the Clivus Victoriæ, which ascended the Mount from the Via Nova, skirting its base from the north-east to south-west. Above these disinterred buildings of Caligula, who first extended the palace to this side near the Forum, rises a series of vaulted parallel halls, referred to Nero, all entered from the open fronts, but without other orifice for light or communication, their floors still retaining the mosaic pavement, black and white marble, inlaid without any figured design; and at one end the wall, now serving as buttress to the garden-terrace above, has an ornamentation in painting and stucco relief, with female figures and arabesques, in style reminding of the Pompeian. The beautiful, though much-injured painting and gilt stucco works in the vaults of the two subterranean chambers, long erroneously called "Baths of Livia," may now be seen by daylight, instead of the taper of the custode whose escort was formerly necessary; and it is intended to excavate farther here, where, like this dwelling-house of sumptuous character, other edifices may have stood below the present level of the Mount, reduced to mere subterraneans by the imperial buildings above. It is also intended to isolate the Cæsarian Palace on the north-western side, by disencumbering a series of vaulted cells hitherto filled with soil and obstructed by modern walls, in the works begun for which object have been found remains of stucco ornament and painting,—among other relics a well-executed statue of Venus Genetrix, headless, wanting the arms and feet, draped so as skilfully to display the forms of nature under the finely-folding vest. The most curious epigraph yet brought to light, is on a colonnette of Alban stone, in archaic characters, but supposed of date not earlier than Claudius, referring to the Jus Fecialis,* and already illustrated in the admirable work of Mommsen, who cites it in the Addenda to Vol. I. of his "Roman History." May we not admit that the scepticism of that able writer as to all reliable memorials or traditions of the Rome anterior to Servius Tullius and his celebrated fortifications around the Seven Hills, receives some check, if not absolute refutation, from the very significant monuments discovered by these excavations, as also from the results of contemporary researches under St. Anastasia?

The excavations, begun 1858, under S. Clemente, have supplied proof that the primitive building, now subterranean to the later church (which was rebuilt after the Norman conflagration in 1084), had been adorned throughout in polychrome, with numerous groups of sacred and legendary subjects, divided by ornamental bordering; and though obviously of different dates, these paintings possess high value as beyond doubt the most ancient series, out of the Catacombs, among works of the same class in Rome.

Next in finish and complex composition to the scenes from the life of St. Clement are those illustrating the story of St. Alexius. We see him, an unknown pilgrim, returning from the Holy Land to the house of his patrician father in Rome; again, just before death, receiving the Sacrament from Pope Boniface, and revealing the secret of his birth by means of a scroll, after having spent years as a mendicant supported by alms at his father's gate; finally recognised on his death-bed by his father and destined bride, to whom the Pope has discovered his identity: the heads in these groups expressive, some not without beauty, the costumes rather Classic than Mediæval, but the Pope appearing mitred and vested almost like an officiating prelate at the present day. Above is the Saviour enthroned with Saints Michael, Gabriel, Clement, and Nicholas; but all these figures headless. Another series is in several compartments, and of evangelic subjects: the Crucifixion, with the Mother and St. John standing beside the cross (probably the very earliest picture of this subject in any Roman church); the two Marys at the sepulchre—here like a narrow archway; within which hangs a lighted lamp, the angel seated on the other side, as if answering to their inquiries, "He is not here;" the descent to Limbo—the Saviour's figure floating downwards, and extending one hand to an aged man, beside whom stands a female, probably Adam and Eve, though both are fully clad, contrary to early art-traditions; the marriage at Cana; in the background a perspective of architecture drawn with some skill, and over one of the several figures the name, written vertically, *Architriclinius*; also, on another surface of wall, a large picture, whose subject is either the Ascension or the Assumption of the Virgin: from the comparatively late introduction of the latter in art we might rather decide for the former, the Saviour appearing above seated in a rainbow within an elliptic aureole, supported by floating angels; in the centre Mary, with long mantle and veil, her arms outspread in attitude of prayer; below, on each side, the Apostles, whose action and countenances express various degrees of astonishment and awe; and at the extremities of this group, St. Leo and St. Vitus, with names written below, the Pope's head having a *square*

* The Fecialis were a priesthood empowered to declare war or make peace. When any native had offended the Roman State, one of their body demanded redress; and after the lapse of thirty-three days, if no satisfaction had been given, the Fecialis buried a bloody spear into the hostile territory, to announce the war resolved on.

nimbus, proof that this Leo (whichever of the name) still lived when the picture was painted. The grotesque character of the heads and coarseness of outlines, in its figures, as also in the Crucifixion, leading us to infer for both a period of hopeless decline in art. Superior, but less perfectly preserved, is a group of a funeral procession, led by a Pope Nicholas, whose head has the circular aureole, and two Latin inscriptions below explain the scene, not giving the name of the person interred with such honours, though supplying that of another, "*Maria Macollaria pro timore Dei et remedio animæ meæ*," some pious lady who ordered this picture. Another subject, on the lateral wall of a niche, is St. Blasius healing a boy of disease in the throat, for cure of which maladies that saint is still invoked at Rome. The "Baptism of Constantine" and the "Crucifixion of St. Peter" are on another wall, but recognizable only in a few remnants of faded figures, apparently, indeed, of superior style, and referable, with the best among these very unequal works, to a primitive antiquity. A portion of inlaid pavement in rich marbles, disposed quite irregularly, is believed to be certainly as old as the time of Constantine, to which some critics have referred the best among the paintings here, though others suggest the seventh or eighth century. The commission of sacred antiquities for a period carried on their excavations at this church, but the responsibility and expenses have been mainly sustained by the Prior of the Dominican convent here, whose zeal in the cause has constituted for him a claim to public sympathies. As this community of Irish Dominicans at S. Clemente is by no means among the wealthier bodies of regular clergy in Rome, their superior has been obliged to appeal to the English public for assistance in an undertaking of heavy cost, for which he has sacrificed much; and some amount of offerings has flowed in, the Prince of Wales having been among liberal donors. On behalf of the Rev. Joseph Mullooly, who may be addressed at the St. Clement convent, the claims for this object, so interesting to archæologists, may be recommended to readers of the *Builder*.

Another late discovery of early Christian painting may perhaps assist in throwing light on those above mentioned. At S. Lorenzo, beyond the walls, a restoration was begun about eight months ago, with a view principally to laying open the half-buried area of the church's oldest part; and at the east end, below the choir, were uncovered two fresco groups, long hidden, of the Virgin and Child, with several male and female saints,—Laurence, Sixtus, Cosmas, and Damian; Agatha, Agnes, &c.; bearing some analogy with the figures at S. Clemente, and supposed of the tenth or eleventh century. Whoever has visited Rome will remember the severe simplicity of this fine old church, on the road to Tivoli, retaining the early basilica type, and with an aspect, as its grey pile and time-worn square tower are seen against the distance of gracefully-swelling mountains, full of quiet and most characteristic dignity. The original edifice, raised by Pelagius II. towards the end of the sixth century, still stands, but reduced to a tribune and hitherto partly buried under the construction of Honorius III., who built a much larger one between 1216—1227. Fortunately the restoration ordered by Pius IX. does not tend to any detriment of the olden features, hitherto intact, but merely to the repairing of masonry and woodwork of atrium and attics, and the entire roof, whose enormous beams are left exposed without any ornament; besides—indeed, the best object in view—the isolating of several beautiful fluted columns, spoils from Classic edifices, and the restoring of the area below the high altar and tribune, that the primitive temple of Pelagius may again serve for worship. For some years labourers have been daily at work to enlarge the great public cemetery adjacent to S. Lorenzo, where an arcaded portico is now rising around the quadrangular court first entered; several monuments (not all, indeed, in good taste) stand on the terraces and slopes beyond; and two years ago was opened a conspicuous chapel, in the centre of the same outer court, with an Ionic colonnade on steps, and a lower story of light vaults,—a showy, inappropriate building, out of keeping with all accessories around, and most especially with that venerable basilica near,—one more proof, in fact, how Rome's modern architects have lost all feeling for Christian antiquity, and for those high proprieties that should cause the old and new to harmonize. We are sorry to see a sacrifice of one class of sacred monuments that we might expect to see most jealously guarded *here* at least, by these works for the cemetery, in the cutting-off or breaking-open of corridors and chapels connected with the primitive catacombs that diverged from below St. Lorenzo, extending far through the Ager Veranus, where the first chapel to St. Laurence was raised by Constantine. Paintings in some of these chapels exposed to the day, but now inaccessible, deserve a better fate.

THE PROPOSED WEDGWOOD INSTITUTE

CERAMIC ART IN ARCHITECTURE.

A CONFERENCE has been held at Burslem to forward the erection of the proposed Wedgwood Memorial Institute. Money has been subscribed, it will be remembered; a site purchased and cleared; and a design for the building by Mr. G. B. Nichols selected. The amount in hand, however, is at present insufficient, and the conference was held to see how more could be obtained. The estimated outlay is 4,000*l.*, and of this about 2,500*l.* are yet wanting. Mr. J. S. Hill presided.

The secretary said Mr. Beresford Hope had proposed to give a prize of 25*l.* "for the best coloured sketch for an artistic treatment of the block façade of the adopted plans for the Wedgwood Institute, to be designed with a view of introducing the ceramic art of the Potteries in connexion with architecture, in the form of terra-cotta mouldings, tile mosaics, Della Robbia panels, &c., any or all capable of being gradually carried out independently of the completion of the fabric itself, for all practical purposes."

Mr. Hope, who was present, gave his reasons for the proposition. In commemorating Wedgwood they commemorated ceramic art; they commemorated, if he might so speak, the father of ceramic art in the Potteries; but they did not wish that commemoration to be a mere monumental record of something which had reached its climax, and would henceforth stand still for ever: they wished it to be a monument for ever growing, ever increasing in power. He should like that monument not merely to be a record of Wedgwood, but a fructifying germ which would develop art to an extent beyond what Wedgwood ever dreamed, or beyond what any one in that room would ever dream of. Their manufacturers had developed ceramic art to a very wonderful extent. Vases, statuettes, and the like, were produced in the Potteries with a perfection which made Europe aghast and envious. But there was another more solid and more eternal sort of pottery he should like to see taken up in this district, and that was architectural pottery. He was not propounding any vague dream of his own. If they travelled in Italy they would see pottery architecture there, of which they had no idea in these northern climes, but which they ought to have, inasmuch as potters' ware was more fit to stand the atmosphere of manufacturing districts than any kind of stone. He referred in illustration to the hospital at Milan, with its beautiful mouldings in terra-cotta, and to the specimens of Della Robbia ware in the South Kensington Museum; and remarked that he should like to see the manufacturers of the Potteries coming forward to develop this ceramic architecture as it had not yet been developed in England. If they would do so he was sure they had as much chance of success as they had when they tried to rival Sèvres and Dresden, or as Wedgwood had when he attempted to model the Barberini vase; and although there might appear practical difficulties in the way, he believed they could be overcome; and they could not have a more appropriate or fitting opportunity than in connexion with the Wedgwood memorial to make such an effort. He complimented the architect on the skill he had displayed in the arrangement of the interior as shown by the plans; and urged that there was nothing disparaging to his position in what he proposed. He merely desired to give the building a decorative coating outside, as others would inside. Thornhill painted St. Paul's, but it did not detract from the fame of Wren. What he proposed was to decorate the building with decorations of pottery: they might be mouldings in terra cotta: they might be Della Robbia panels; or they might be mosaics. There were various means by which ceramic art might be made available in architecture, all of which had their merits; and in that competition he wished for architects to have the opportunity to try all or any of them.

Mr. J. E. Heathcote offered a second prize of 15*l.*; Mr. J. Edge a third of 10*l.*; and Dr. Armstrong a fourth of 5*l.*

The architect of the proposed building fully approved the proposition, and it appears probable that this step will be taken.

At first sight this seeking for a second architect to decorate a first architect's work would seem to be a step in an entirely wrong direction. We should much regret to find it made a precedent. The circumstances, however, are certainly special, and may serve to defend the proposition. The result sought for is very desirable.

Several who were present doubled their former subscriptions, and the chairman offered to supply some of the external decorations when they had obtained the designs.

CONSTRUCTIONS IN WOOD.

ENGLAND.*

WE notice the introduction of the custom to overhang the upper stories. This may have had its cause in all instances where, with the increase of families, it became necessary to enlarge the houses,—that is to say, the roof was taken off, and another story was added, which was extended over the open sides of the lower house. Further we observe, on the ground-floor, an open arcade. Such houses often represent very interesting features, the posts and struts being richly carved, and the panels filled in with ornamental tracery. The more prominent, on frame timbers, being also painted dark. In the churchyard of St. Peter's, Derby, we have one of these corner posts, the stem of which has a fluted panelling, moulded base, and capital, with a row of Tudor flowers. The spandril of the arch is covered with a diaper pattern. Another example is at Great Chesterford, Essex: also one at Salisbury, which is rich with panelling, mouldings with flowers, and the spandrils are filled in with flowing tracery. At Bury St. Edmund's is a very curious example.

The one in Northgate-street, Gloucester, is remarkably rich, with the figure of an angel in a niche, and smaller niches on its sides. The canopies are carved with crockets and finials.

The doorposts of such timber-houses were, no doubt, equally decorated; as the doors and such like may still be found in Welsby, Herefordshire; in Sherbourne, Dorsetshire; and in York.

Besides these, we meet often with windows enriched with mouldings and panelling; for instance, at Saffron Waldon, Essex. In some cases the entire front of a house is a continuous series of panelling, either plain or richly carved. Of the former there are examples at St. Mary le Wigford, Lincoln, and at Tamworth, in Staffordshire.

In illustration of the latter, we have part of a house in Eastgate-street, Bury St. Edmund's, and another at Dunster, Somersetshire.

The front of a house in the market-place at Newark is a mixture of timber with plaster ornaments. It has a long series of niches; and figures in plaster, are inserted into the wooden panels. As a splendid example of this period must be mentioned the roof of Crosby Hall, in London; and a fair specimen of a small tradesman's house is seen in St. Mildred's, Canterbury.

In the double butchers' row, at Shrewsbury, we also have a good example of a house of this period, with carved corner-post. Looking at the roofs of domestic halls, it is evident that they retained their form; but they have, further, some improvement in the arrangement of the louvre, to carry off the smoke.

The roof of Christ Church Hall, Oxford, is a well-preserved example; so are those of Hampton Court and Eltham Palace.

The hall of Trinity College, Cambridge, also retains its roof and louvre; and the roof of St. Mary's Guild, at Coventry, deserves to be mentioned, owing to its excellent condition.

South Creek Church, Norfolk, has a good roof of the Perpendicular epoch, also a beautiful screen.

Another, with rich tracery in the spandrils is in Worsted Church, Norfolk: the screen dates from 1524. Martham Church retains some interesting woodwork of this time, which is worthy of mention.

One of the most costly roofs is over Woolpit Church, Suffolk. It is a double hammer-beam, and the rood-screen and seats also remain.

The roof of Palgrave Church, in Suffolk, has colouring, which is still very perfect, and it is a good example for a small church. The roofs of Outwell Church, in Norfolk, show a few peculiarities, and the one over the north transept retains its original colouring. The roof over the nave of Brinton Church, Norfolk, is similar to the one just described, with the difference that the principals terminate somewhat abruptly on the wall pieces.

The woodwork which forms the lower decoration of the wall is generally found in carved panels, and in some instances they bear traces of colours.

* See p. 107, *ante*.

About this period plaster was introduced into the ceilings, and the main beams were only left to view: these were richly moulded, and had bosses at their intersections.

The furniture of this time was still scanty, and can hardly be considered to have made equal progress with other utensils for domestic purposes.

However, we have a good specimen at Come St. Nicholas, Somersetshire, in the remains of a table, and bench with the poppy-head.

Some of the strong iron-bound chests, the woodwork of which is richly carved, also date from this time.

The Guildhall of the city of York has its original timber roof. It is supported by a double row of octagonal pillars, with moulded capitals and bases. It was built in 1446.

St. Anthony's Hall, erected anno 1440, retains its fine open timber roof, supported by posts. Among other specimens of this period, we have the corner house at the end of the pavement: the curved spurs and brackets, which carry the overhanging story, are remarkably rich.

A very flat-pitched roof is over the nave of St. Mary Magdalen Church, Pulham, Norfolk: still its effect is very pleasing: the various timbers are moulded: the spandrils next the ridge are filled in with tracery; and there are traces of its having been coloured.

A plain roof, with good details, can be seen at Starston Church, Norfolk.

Preslingfield Church has a single hammer-beam roof: although of low pitch it produces a good effect by a high degree of finish.

The roof of Islip Church, in Somersetshire, is richly decorated; but it creates a heavy impression.

The chancel and nave of St. Stephen's Church, at Norwich, are covered with a magnificent roof, which is very carefully wrought.

The nave of Bacton Church, in Suffolk, is covered by a double hammer-beam roof: the abundance of carvings imparts to it a most rich appearance, which at one time was enhanced by the colouring. In the interior of the church are to be seen some fine examples of screen-work and of open seats.

The roof of Bolton Hall was also erected in the fifteenth century.

Selby, in Yorkshire, retains a good example in the upper part of a house: the walls are of timber stud-work, with coved eaves: the windows, of seven lights each, have rich tracery.

In Agecroft Hall, Lancashire, is to be seen a fine oriel window of carved timber, which was erected during the reign of Henry VIII.

Buckshaw Hall, near Kirby, is a beautiful timber house, probably from the time of Queen Elizabeth.

Some interesting details may be seen in Middleton Hall, from the time of Henry VIII. A portion of Ords Hall, in Manchester, is of the same date: it has good windows and panelling.

Peel Hall and Redscar Hall are elegant timber structures of the Elizabethan period; also Salisbury Hall, near Blackburn, the upper part of which is of timber.

The double hammer-beam roof over the nave of Knapton Church, Norfolk, is most beautiful, owing to its carving, colouring, and its general state of perfection.

Mattishall Church, Norfolk, has some timber roofs, decorated with colours; and also richly coloured is the roof of Oldenham Church, Herts.

The roofs over Walsingham Church, in Norfolk, are examples of good timber framing: the open tracery is of excellent design and workmanship.

Bramford Church, Suffolk, has a good hammer-beam roof over the nave, also timber roofs over the aisles. Ixworth Church, Suffolk, has a hammer-beam roof over the chancel, and lean-to roofs over the aisles. The tracery is of excellent design. A very interesting specimen, with exquisite carvings, is at Halsingfield, in Cambridgeshire. Bishop Layland's church, in Somersetshire, retains its old seats, and a beautifully-carved screen.

Samlesbury Hall deserves our special attention, having been erected, in 1545, by John Southworth: the timber framing is very massive. The roof has the appearance of an earlier period, but it was erected at this epoch. The music-gallery is of fine timberwork, with richly-carved posts, which are connected with the beams of the roof.

Smithell's Hall is another specimen of a fine timber house of Henry VIII.'s time: it is a copy of the one at Baggily.

The greater portion of Speke Hall was built during the reign of Queen Elizabeth. Little Moreton Hall, erected in 1559, is a very fine timber structure; so is Bramhall; the greater part of which dates from the Elizabethan period.

At Derby we find an interesting corner post, richly carved, and some details of ancient woodwork are left at Haddon Hall.

The old mansion of the De Burgh family, at Gainsborough, is a very fine example of a half-timbered house of the fifteenth century.

In the parish of St. Mary le Wigford is a good timber house of the fifteenth century, having two overhanging stories.

At Tamworth, in Staffordshire, several structures remain of the Elizabethan age. Wigston Hospital, in Leicester, is partly built of timber, with wooden porches, carved doors, barge-boards, &c.

Some remains belonging to 1414 are in the Town-hall at Coventry; amongst which the roof of the kitchen with its louvre is very original. There are also in Coventry, of the same period, a few wooden windows with rich tracery.

Apthorpe, in Northamptonshire, is an Elizabethan mansion, but it was finished during the reign of James I.

Rushton Hall, in the same county, retains a fine open-timber roof of high pitch, with hammer-beams and two collars; and the spandrils are filled in with elaborate tracery, and there is also a wooden screen, of the Elizabethan period.

In Gloucestershire, we have a good open timber roof at Broadway, in the so-called Old Workhouse, belonging to the Decorative style. At Droitwich we have the George Inn, an old timber house of the fifteenth century. The open timber roof in Berkeley Castle is of the Decorative period. In the city of Gloucester, at the corner of Northgate-street, stands a timbered house of the fifteenth century, with a very rich corner-post. In the same street is also a magnificent gateway of oak, with carved spandrils and brackets.

Little Sudbury Manor-house, of the time of Henry VIII., possesses a roof and some carved heads of the same period.

Ockwell's House, in Berkshire, is nearly a perfect timber house of the time of Henry VII.: the barge-boards are remarkably rich. This building is used at present as a farmhouse.

The magnificent hall in Hampton Court Palace, on the north side of the middle quadrangle, measures 106 feet by 40 feet: the rich Gothic roof is ornamented with the arms and cognizances of Henry VIII. It was finished in 1536 or 1537, as appears from the initials of the king and Jane Seymour, joined by a true-lover's knot, amongst the decorations which may be considered as the finest in England.

The ornamented woodwork in the Guildhall at Norwich (1534) illustrates the arms and crests of the guilds of the city.

There are a few ancient timber houses in Bury St. Edmund's, Suffolk: in one of them we notice a good corner-post of Henry VII.'s time.

The hall in the Middle Temple at London, 100 feet long, 42 feet wide, and 47 feet high, is covered with one of the finest wooden roofs now in existence. It was built in 1572. It is of Elizabethan character, with a tendency towards the Renaissance. The elaborate carved screen is apparently of later date.

At Lavenham are excellent remains of a timber house from the time of Henry VII. to Henry VIII., with a square projecting window and a richly carved corner-post.

In Layer Marney House, built about 1530, the roof of the dormitory is original, and there is also some carved oak panelling.

At Waltham also may be seen some old timber houses.

Eltham Palace, in Kent, dates from the last half of the fifteenth century. The hall only remains, and its roof is in a good state of conservation, though it is to be regretted that no better arrangements are made to preserve it from the destructive visitations of visitors. This roof has hammer-beams and pendants with carved braces: it springs from stone corbels; is 100 feet long, 35 feet wide, and 55 feet high. It resembles Westminster Hall, and is now used as a barn.

A considerable portion of the works at the Moat, Igtham, belongs to the time of Henry VII. and Henry VIII.

At Rainham there is some oak panelling and a doorway, in Bloor's-place, of the time of Henry VIII.

Wingham has also several timber houses of the fifteenth and sixteenth centuries.

The Archbishop's Palace at Croydon retains its original roof over the hall, which was probably finished under Henry VIII. It has a fine appearance, and is similar to the one over the hall of Christ Church, in Oxford.

The kitchen in the episcopal palace at Chichester, Sussex, has a grand open timber roof. In the hall of St. Mary's Hospital, in the same town, we have an excellent specimen of Decorated woodwork, most probably executed in the latter half of the fourteenth century.

At Lewes, and at Steyning, some timbered houses are met with; also at West Tarving is a house seemingly built before the time of Elizabeth.

Beadenstoke Priory, Wiltshire, retains over the hall, which is now divided into several apartments, a very fine roof of the fourteenth century, with rich carvings on the oak beams. A good timbered house of the fifteenth century is at Pottern.

In Salisbury, the hall of John Halle has an excellent roof of the fifteenth century.

Place House, near Tisbury, has also a perfect timber roof of the fifteenth century, with tie-beams and queen-posts. The latter are chamfered. The barn attached to this building has a good plain roof of the same time.

South Wraxall Manor House has a roof over the hall of the time of James I.; and also, of the same period, a rich panelled screen.

At Pottern remains a timbered house of the time of Queen Elizabeth, with carved barge-boards and panelling.

Among the timber antiquities of Bristol, Somersetshire, must be enumerated the roof of a house in Redcliffe-street, erected in the fifteenth century. It has a high pitch, louvre in the centre, and the principals are richly foliated. In Small-street we have an original roof high-pitched, and a very fine specimen of the trefoil form.

In Butleigh also may be seen an interesting timber-framed house. Dunster has a good example of Henry VII.'s time.

The George Inn, at Norton St. Phillips, is a half-timbered house of the fifteenth century. A few oak window-frames of this period are still to be seen in the parsonage at Stanton Drew.

The Manor House at Twickenham Court retains its plain roof over the hall.

Bradfield Hall, in Devonshire, has a roof of fine obtuse arches, of timber, with angels at the springings. The adjoining drawing-room has a panelled ceiling, richly ornamented with pendants. The pillars are decorated with carvings. The dining-room is executed in the same character, probably in the earlier part of the sixteenth century. A house on the north side of the cathedral close retains a fine wooden ceiling from Henry VII.'s time. There are also some good timbered houses of the Elizabethan period.

In the hall at Cothele, in Cornwall, is an open-timber roof of Henry VIII.'s time, and also some furniture of the same period.

The chapel of Trecarel House has a cradle roof. The fine cradle roof of the hall is also still to be seen.

Some Elizabethan timber-work is still found in Langley Hall, Shropshire.

Plush Hall has an open timber roof of the time of Henry VIII.

In Shrewsbury, on the corner of Butcher-row, stands a fine example of a timber house of Henry VII., fifteenth century. It may be considered as unique in England, with its series of open arches, which have very good details, and the overhanging stories, barge-boards, &c. In this city are many picturesque buildings of the Elizabethan and of later periods.

Wenlock Abbey has a good timber roof over the abbot's hall: the purlins are connected by cuspings, which produce an excellent effect. The carvings of this roof belong to a later period.

The Shire Hall, at Hereford, is a remarkable structure, of the seventeenth century, in imitation of earlier work, and it was probably the most extensive of its kind: the hall, 84 feet by 34 feet, is supported by twenty-seven oak pillars, which rest on stone bases in these rows. The former have a shaft attached to each face: the spandrils of the arches are carved, and have pendants hanging from them, all of excellent design. The hall was erected by John Abel, who also built the market houses at Kingston and Brecknock.

In Coventry we have from the earlier part of the sixteenth century, houses in Wells-street, Bond's Hospital, and Ford's Hospital, all of which have very interesting details. One house in Wells-street retains its original timbered gable, with neatly covered barge-boards. Another gable in the same street has still richer carved barge-boards. In Bayley-lane also are to be found some examples of this as well as of the Elizabethan age, in a good state of preservation. Hay-lane and Butcher's-row offer two more examples, with excellent carved barge-boards.

Good barge-boards are also to be seen on the hospital in Warwick.

A gable at New Brentford, Middlesex, dating

from the beginning of the sixteenth century, shows details contemporary with the last epoch, of the Gothic, or Pointed style. In High-street, Rochester, is a similar example to the foregoing.

At Eltham Palace, Kent, we have three gables, which probably date from the same period as the old hall: the barge-board is edged with tracery.

From the latter part of Henry VIII.'s time there is a picturesque house at West Bromwich.

Elmley Lodge, in the parish of Elmley, was built at various periods: its front portion bears the date 1635, and was finished at the beginning of King Charles I.'s reign. The details of the later portion built, partake of an Italian character.

The Old House in Preston, Lancashire, was erected in 1629, according to an inscription which it bears. It is a beautiful and commanding specimen of wood architecture: its lower portion has been modernised.

The village church at Huddington retains a wooden porch, which dates apparently from the fifteenth century.

Bramall Hall, near Stockport, a timbered structure of the Elizabethan age, has lost much in appearance during the last fifty years. From the hall, which is 36 feet square, leads a solid oak staircase to the drawing-room situate over it, and which is of equal size; the ceiling being studded with ornaments.

Pitchford Hall, Shrewsbury, with its richly-carved barge-boards, dates from the end of the sixteenth century.

Salwarp Court is an old half-timbered Manor-house, with a good door, and barge-boards.

Meet Hall, near Droitwich, dates partly back to 1535, according to the carved inscription; but its main portion has a decidedly later character.

The Hall in the Wood, near Bolton, is one of the finest which we meet with; and the gable of a cottage at Worsbrough is also a very interesting example.

The main portion of Ince Hall, near Wigan, dates from the same period, although there may be some older relics. It has a richly carved oak ceiling.

Park Hall, near Oswestry, built about the middle of the sixteenth century, presents many peculiarities in the decoration of the exterior, especially in the form and arrangement of the principal timbers. The interior has also retained its original adornments.

Moreton Hall, Cheshire, probably executed in the first half of the fifteenth century, possesses many peculiar features.

The Town Hall at Leominster, erected in the sixteenth century by John Abel, is at present in a very perfect state.

The principal entrance to the old hall or Court-house at Welsby displays some beautiful carvings with appropriate devices. The details are of pure Gothic character.

Another structure by John Abel is the Ley, near Welsby, the front of which offers many striking features. By the same architect are some specimens left, which show the adaptation of timber to more humble habitations. These are the Alms-houses in Hereford, and the School House at Welsby. The porch of the latter is very interesting.

Ludlow has a fine example of street architecture in timber, which is remarkable for its variety of style. The same house has a handsome ceiling.

Turning to Chester, we have a house in Whitefriars-street: the panels of the gable are filled in with ornamental plaster work. More interesting is a house in Lower Bridge-street. In Watergate-street is "God's Providence is mine inheritance," having the date 1652. A fine specimen is the old palace of the Stanley family, with a prominent Elizabethan aspect, erected 1591. Also Bishop Lloyd's house in Watergate-street, 1615.

Amongst the most recent structures in wood which deserve notice are the oak decorations in the interior of the House of Peers in Westminster Palace; also of merit is the woodwork by Mr. Rogers, in St. Michael's Church, Cornhill, London.

With these remarks I conclude my notes on wood constructions in England. The books to which I am indebted for much information are;—Brandon's "Timbered Roofs of the Middle Ages," Clayton's "Ancient Timber Edifices of England," Habershon's "Ancient Half-timbered Houses of England," Parker's "Domestic Architecture of England," and Pugin's "Ornamental Gables."

JOSH. JUSTEN.

SOCIETY OF ARTS.—On Wednesday next, Mr. C. B. King will read a paper on "The Suppression and Extinction of Fires." The Earl of Caithness will take the chair at eight p.m.

A NOTE OF WEDDING-RINGS.

ALL thoughts just now are running connubial-wise. In the accounts which have been given of the preparations for the wedding of the Prince of Wales and the Princess Alexandra, the public have been told that the wedding-ring, which, "of course," is of plain gold, is remarkably massive, and that its accompanying keeper is set with six precious stones, selected and arranged so that the initial letters of their names shall form the word "Bertie," an affectionate variation of "Albert." The stones of which this happy combination is effected are a *beryl*, an *emerald*, a *ruby*, a *turquoise*, a *jacynth*, and another *emerald*. A plain gold ring has likewise been made to be worn by the Prince himself.

The "plain gold ring," so often referred to by modern poets, and which is so familiar to all the present generation, is but of comparatively recent introduction. Formerly these rings were ornamented in various ways, and some were remarkable for their cunning device and beauty of workmanship. The wedding-rings of the Romans, who originated them, displayed joined hands, intaglios, and inscriptions. Later the "gimmel" or double ring, which opens into two and yet cannot be separated, was used, and rings ornamented with filigree and enamel. It was also the goodly custom to inscribe wedding and betrothal rings with appropriate mottoes. In Germany and Italy finger-rings seem to have been more elaborate during the Middle Ages, and more recently, than has been common in England. There is the betrothal ring of Martin Luther with Catherine Von Bora, which is composed of an intricate device of gold work, set with a ruby,—the emblem of exalted love. The gold devices represent all the symbols of the "Passion." In the centre is the crucified Saviour; on one side the spear, with which the side was pierced, and the rod of reeds: on the other is a branch of hyssop: beneath are the dice with which the soldiers cast lots for the garment without a seam, and below are the three nails. The whole is arranged so as to make a large cross, surmounted by the ruby. Inside the ring, are the names of the betrothed pair, and the wedding-day in German,—"Der 13 Junij, 1525." This ring was presented to the intended wife at the betrothal, and worn by her after marriage.

The ring used at the marriage ceremonial was worn by Luther after the wedding. This is a "gimmel" ring, an emblem of the married state. There is a motto engraved within, in old German. On one hoop is a diamond, the emblem of power and duration; and on the inside of the hoop, which is concealed, are the initials of Martin Luther, followed by a "D," denoting his title of doctor. On the corresponding surface of the mounting of the gem of the hoop are the initials of his wife—"C v B." The gem on this side is a ruby, the emblem of exalted love. These rings are doubtless the design, and probably the handiwork, of Lucas Cranach, the friend of Luther, who was one of the three witnesses to his betrothal: and it is no doubt owing to the combination of artistic knowledge with practical skill in this kind of art-workmanship, that we are indebted for these beautiful productions.

So far as we have been able to learn of the use of the plain gold ring at weddings, it became common in the reign of George II. or George III., when taste in this country was in a deplorable condition; when chairs, tables, and every description of furniture, and houses, were made plain and heavy; so the finger-rings and other articles on which both skill and good design had been formerly bestowed, were made to correspond.

There is a great need for improvement in the designs of rings. There are in this country, in the possession of eminent personages, rings of both historical and artistic interest: there are also some examples in the British Museum: a collection of these for exhibition, on a more extensive scale than was arranged at South Kensington, would be useful both to the makers and wearers of rings.

THE PLANS FOR MUSEUM, CAMBRIDGE.

ON the 5th instant a meeting of the senate was held in the Arts School to discuss the subject of new museums and lecture-rooms. A syndicate was appointed in December, 1862, to consider what liabilities had been incurred by the University for the plans and specifications which were rejected. It appears that Mr. Salvin's charges are 1,828*l.*, which sum must be paid, or the University must go on with the plans. The syndicate suggest the proceeding with the erection of the less ornamental part of the plan. Any attempt to erect costly buildings must either lead to a postponement of the work for some years or to the curtailment of the accommodation supplied. They recommend neither of these alternatives; for the want of museums and lecture-rooms now stands seriously in the way of teaching many of the branches of science. Mr. Blore, of Trinity, was opposed to the report of the syndicate, and questioned the justice of Mr. Salvin's claims. He was of opinion that some attention should be paid to the exterior design of the buildings, and for these reasons he should oppose it in the senate. The Master of Christ's thought that the two alternatives of the syndicate placed before them ought to be well considered. The senate must either go on, or pay Mr. Salvin's bill. But what was to be gained by rejecting these plans? Did any one expect to obtain better? The University ought to consider well what they would gain by thus throwing away nearly 2,000*l.* Mr. Williams, of King's, hoped that, in consideration of the ugliness of the building, there would be security for the best possible arrangement as to its interior. After some further discussion the matter dropped.

We annex the accounts as reported by the syndicate: they may be useful as precedent:—

A. The Senate of the University of Cambridge, in account with Anthony Salvin.

	£.	s.	d.
To designs (consisting of plans, elevations, and sections) for the proposed Lecture-rooms, Museums, &c., prepared in conformity with the Report of the "Lecture-room Syndicate," dated December 31st, 1833, at 2½ per cent. commission on the estimated cost (23,160*l.*)	579	3	0
To designs for the proposed Lecture-rooms, Museums, &c., prepared in conformity with instructions received in May, 1861, and subsequently; and consisting of plans, elevations, sections, &c. Specifications for same, and obtaining tenders, 3 per cent. commission on 26,944*l.* (the lowest tender)*	808	6	0
Travelling expenses in six journeys	15	0	0
	£823	6	0
* NOTE.—If the design is carried out under my superintendence, this charge will be deducted from the usual commission of 5 per cent. as money paid on account. Add charge for first set of designs as per account A	579	3	0
	£1,402	9	0

Inclosure. Letter from Messrs. Smith to Mr. Salvin.

"South-street, Grosvenor-square, 23 Dec., 1862.

Dear Sir.—The surveyor's charges in reference to the Cambridge Museums will be 426*l.* It is not our intention to make any claim for our trouble, but we shall be much obliged by early attention to the above, as the surveyors naturally now expect payment.—We beg to remain, &c.,

GEO. SMITH & Co."

Summary.

	£	s.	d.
Mr. Salvin's claims	£1,402	9	0
Surveyor's charges	426	0	0
	£1,828	9	0

ON THE INTRODUCTION OF STEAM NAVIGATION.

AT the last ordinary meeting of the Manchester Literary and Philosophical Society, Mr. Dyer read a paper entitled "Notes on the Introduction of Steam Navigation."

Mr. Dyer stated that this subject, being of great importance, had engaged many able pens in tracing the origin of the several inventions and experiments that preceded the final triumph of steam power over that of wind for navigating ships; each writer claiming the honour of priority for his own country. It may be useful to give the order, he went on to say, in which, and the parties by whom, the principal attempts were made to realise that object. Several letters lately appeared in the *Times*, and were thence transferred to the pages of the *Engineer*, giving a graphic account of the "first steamer in English waters," the "*Margery*, built at Dumbarton, by the late William Denny, for William Anderson, of Glasgow, and passed through the canal to the Forth, and thence to the Thames, where she arrived on the 23rd January, 1815." On the authority of Mr. Anderson, then, this date is fixed when the first steamboat was seen on English waters. The first steamboat, the *Claremont*, was started as a regular packet on the Hudson River, in the spring of 1807; so that the first steamer seen on the American waters was fifty-five years ago, a lapse of time that should now insure a calm view of the steps that led to this first actual success in steam navigation. It will be shown that, by a long course of persevering labours, the honour of that success must be conceded to Robert Fulton, by whom it was achieved.

Whilst admitting the merits of other ingenious men long engaged in the same pursuit, it is clearly

THE ROYAL MUSEUM AT NAPLES.

proved that, either from good fortune, or by the exercise of superior judgment and skill, the race was won by eight years' priority of steam navigation, by Fulton, on the Hudson River.

In 1793, Mr. Fulton sent his plan for a steamboat to Lord Stanhope, who approved of, and thanked him for, the communication. Shortly after, Fulton went to Paris, and made experiments on the French waters, with the chain floats, the duck's-foot paddles, the screw or smoke-jack propellers, and with the paddle-wheels, to which latter he gave the preference, and constructed a boat with them in 1803, which was the model adopted in building the *Claremont* in 1806.

Mr. Dyer had sailed in the *Claremont*, and remembers the sensation created by her appearance, and the high admiration bestowed on the author of so great an enterprise. That sensation in 1807 was precisely the same as the *Margery* created among the vessels on the Thames in 1815.

All attempts at steam navigation were fruitless before the invention of Mr. Watt's steam-engine, his engine being the *first* that could be usefully applied to rotative machines on *land*, and therefore for propelling ships. The principal claims put forth by other inventors of steamboats, are the following:—

In France, the Marquis de Jauffroy constructed a steamboat at Lyons, in 1782, "with paddle-wheels;" but that this boat did not succeed is obvious, because she was not heard of until 1816, when the first Fulton boat was started to run on the Seine.

In 1783, Daniel Bernoulli proposed a plan which consisted of forcing water, through a tube, out at the stern of the boat. This scheme has been tried many times since, but fails on account of the defective principle of applying the force. *Endless chains*, with float propellers, have been many times tried, and have failed on the same ground.

In 1795, Lord Stanhope made experiments with a boat on the Thames, using the reciprocating or "duck's foot" paddles, which also failed, from the loss of time and power by the return stroke.

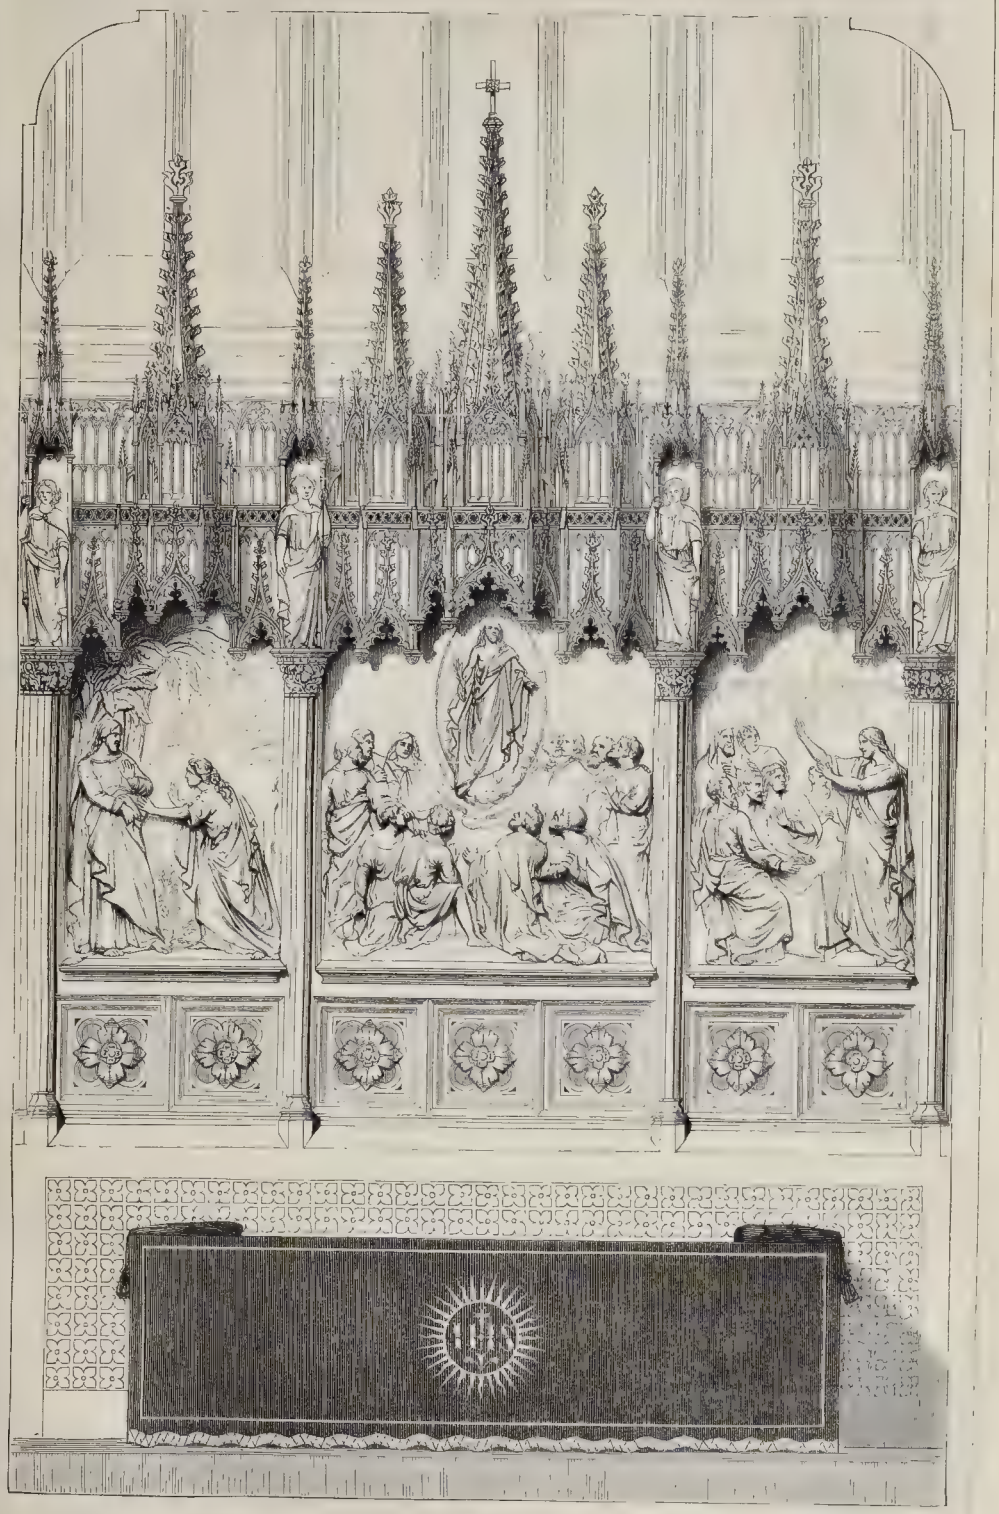
In 1785, James Rumsey, of Virginia, tried a boat on the Potomac, and afterwards in London, both without success; and about the same time Mr. Fitch, of Philadelphia, tried one with paddle-wheels, on the Delaware, but this boat also did not succeed, and was given up as a failure. J. C. Stephens, of New York, made experiments in 1804, with a "boat 25 feet long and 5 feet wide," which of course did no good, and was stopped as a failure, though again brought to notice as preceding Mr. Fulton's.

In 1788 and 1789, William Symington, in conjunction with Patrick Millar and James Taylor, made experiments with their patents for navigating by steam, and in 1802 commenced running a boat on the canal at Glasgow which made three miles an hour; but after many changes of her propellers and trials, the scheme was given up, and no more was heard of the steamboat of Mr. Symington until long after those of Fulton were widely spread over the American waters.

In 1816, the Marquis de Jauffroy complained that the Fulton steamboat on the Seine had taken the "paddle-wheels" invented by him and used at Lyons thirty-four years before, but also abandoned by him. To this charge M. Royou replied in the *Journal des Débats*, thus: "It is not concerning an invention, but the means of applying a power already known. Fulton never pretended to be an inventor in regard to steamboats in any other sense. The application of steam to navigation had been thought of by all artists, but the means of applying it were wanting, and Fulton furnished them."

The first ocean steamer was the *Fulton*, of 327 tons, built in 1813; and the first steamer for harbour defence was built under Fulton's direction, 2,470 tons, launched in 1814. This became the model ship for the iron-clad batteries and rams since constructed with many changes. It will be seen, by the drawings of Fulton's plans, that he had tried the several other kinds of propellers—the chain float, duck's foot, and the screw fan—before adopting the paddle-wheel; for, though the *screw* was good in principle, it was many years before it could be constructed to act efficiently. The *James Watt* was the first boat with the screw running between London and Havre, about ten years after the advent of the *Margery*.

In 1811 I endeavoured to introduce steam navigation into England, but I found a strong conviction that it would not answer in this country; our most eminent engineers saying, "We don't doubt the success of steamboats in the wide rivers and harbours of America, but in our comparatively small rivers and crowded harbours they will never answer." Even such scientific engineers as the late John Rennie, sen., and Peter Ewart, a vice-president of this Society, both advised me to relinquish the attempt to introduce steamboats, as sure to prove a waste of time and money to no purpose. However, when conviction came over the public mind that steam navigation would answer here—but not until after more than 5,000 tons of steamboats had been launched on the Hudson in 1816, did it so come—then began the spread of steam navigation, since extended with such marvellous rapidity and perfection as to atone for the sluggish beginning. Since nations are indebted to the genius of Watt for success in using steam power, to that of Fulton for its successful application to navigation, to Stephenson for the like success on railways, the meed of praise due to each of their names should be cheerfully awarded by all who are so largely benefited by the result of their labours. In doing this we should bear in mind, that *inventions* do not spring into existence perfect from their birth, like Pallas from the brain of Jupiter, but they come from the prior labours of many brains, and he is the true inventor who first collects the essence of and gives the stamp of vitality to those labours. In this sense the invention of steam navigation will for ever illustrate the name of Robert Fulton.



THE ROYAL MUSEUM AT NAPLES.

ANNEXED is a ground-plan of the Royal Museum at Naples, which was carefully measured by Mr. S. Loat (travelling student of the Royal Academy) and myself in 1829. Never having seen a plan of this building in print, I conceive a publication of it would be interesting to the subscribers and readers of the *Builder*. The edifice is immense, being some 490 feet long by 240 feet wide. It is built with vast solidity, and the floors are vaulted in brick. It lays no claim to architectural merit as to details. Carriages can freely enter and circulate in the central vestibule, the arcades being nearly 20 feet wide. The top light to the staircase is a semi-ellipse, whose larger diameter is about 20 feet. The principal staircase is lighted from the top. The rooms on the ground-floor are chiefly devoted to statuary. The celebrated Farnese Bull (group) is at A, and the Hercules at B. The apartment C is filled with wall frescoes, removed from Pompeii. The apartments DD at the rear of the building are casting shops. The courts EE are filled with antique fragments. Above the central vestibule is the library, about 170 feet by 70 feet. The remaining rooms contain the bronzes, fictile vases, and pictures. The height of the ground floor cannot be less than 40 feet, and the same may be said of the next. I think there is a third floor, but I was never in it.

As my information relates to a period of upwards of thirty years ago, when I was pursuing my studies in Naples, I can hardly say what changes have taken place in the interim. The building, however, struck my friend, Mr. Loat, and myself, so much as to induce a careful measurement. I need not comment or dwell upon the very large and interesting collection contained within its walls.

JNO. B. ATKINSON, Architect.

THE OTTOMAN NATIONAL EXHIBITION.—In consequence of the undry state of the paint inside the building, the opening was postponed till 27th of February, when "it was hoped," the sultan would inaugurate the exhibition. Many of the internal fittings, however, still remained to be placed, and goods to be exhibited were actually not yet in the building.

REREDOS, ST. GEORGE'S CHAPEL, WINDSOR.—*Mr. G. G. Scott, Architect. Mr. J. B. Philip, Sculptor.**

FREEMASONS' HALL COMPETITION.

WE have received a letter from Mr. John Havers, chairman of the Committee, denying that our correspondent "A. B." could have received his information from any competent authority. Mr. Havers says, and we are very glad to hear it, that,—

"The Committee are fully aware that well-employed architects will not be at the trouble and expense of preparing designs for the purpose of obtaining only the premiums offered; and they entertain the most confident impression that such arrangements will be made as will be satisfactory to the successful competitor.

"I cannot believe that any architect would intentionally impose upon you or do aught to prevent or stifle competition; but as the statement in the letter must, if not contradicted, be injurious to us and prejudicial to the object in view, I have to request that you will give this letter as prominent a place in your next Number as that accorded to the original statement."

The Grand Lodge has, by special resolution, enabled the Committee to put aside the law quoted.

"THE WORLD'S DEBT TO ART."

UNDER this title Mr. Beresford Hope, who, as will be seen in our present number, has been exerting himself in the cause of industrial art at the Potteries, gave a lecture in the Town Hall, Hanley, on the 24th. In the course of it he urged that the simplest arrangement of materials, the simplest arrangement of flowers, might be artistic. In Kent there was a traditionary way of building chimneys, by a simple variation in the arrangement of common bricks, but the effects produced were most picturesque. Any common labourer could do that. It was true art. He would take a row of houses in Hanley, Birmingham, Manchester, or Bradford. There were so many houses put up—no outline, no skyline, which was a most important element in design—the same dread, dreary, uniform, colourless square block, the same square doors, brass knockers and door-plates, the same sash windows, the same stone slabs under the windows, the same chimneys—and, when they went inside, the same rhubarb-coloured oil-cloth in the passage, the same rooms, with the same paper on the walls, the same Brussels carpet, with the same flowers represented, put where no man would think of putting real flowers, the same mixture of oil-cloth and carpet on the stairs, the same chimney-piece. This was a type of the ordinary English house. It was built by the builder, and the artist was called in, if at all, only at the last moment to decorate. If they went into it they saw the gentleman who had the honour of owning it in his chair, having upon him that most extraordinary and uncouth dress, which he would venture to say no Feejee Islander or any savage in the world had ever invented the like of,—the swallow-tail coat. On his head, when he went out, he wore a chimney-pot hat. By his side sat the partner of his joys and sorrows, in a shawl that had been bought one day and a gown bought another, and not bought to match. And over her crinoline and over these unmatched colours she put a coal-scoop bonnet. With this type of house, this gentleman with the swallow-tail coat and this charming lady—charming if it were not for her crinoline,—had they not got to the bottom of art, had they not chalked up a most ruinous debt to art which was difficult to pay? How could they pay it? Their houses were of brick—they could give them a little variety by using different-coloured bricks, by the insertion of the initials of the person who built it, or some other trifling memorial, which would give it a character and identity. Instead of rhubarb-coloured oil-cloths in the passage, if they had oil-cloth at all, they could have it of good pattern, or could have tiles, or inlaid wood to cover the floor. If they had paper they could have papers with some design and colour. Even a few lines on the plaster ceiling would make that dreadful Sahara a cheerful place;—a few prints and engravings on the walls, real wood furniture which was innocent of the veneerer or the grainer, a little carving of the balusters. They might say those were trifles. They were the halfpennies and shillings to pop into the world's box to pay the world's debt to art. There was no more improving and more refining art in the world than that of good dressing, particularly of female dressing. Every girl who stuck her ribbons in front of her gown either wiped off a part of the world's debt to art or added to the burden. Ten years ago the women dressed well, but they would not let well alone. In these small matters the world's debt to art was to be paid. It could also be paid lump sums by the promotion of the fine and industrial arts; but when he saw painters, instead of entering into open competition with their brethren, painting pictures which were advertised a long time, ordered by some engraver, placarded about like a sensation drama at the Victoria Theatre, then hung up in a green-room with false lights, and exhibited at 1s. a piece, each person being expected to put down his name as a subscriber for an engraving of the picture,—when he saw this, he felt there was reason to fear that fine art would fall below applied art. Standing there as they did in the centre of a manufacture which was pre-eminently artistic, it was for each one of them to put his shoulder to the wheel to pay the world's debt to art.

AMERICAN TIMBER BRIDGES.

INSTITUTION OF CIVIL ENGINEERS.

AT the meeting on the 24th ult., Mr. Hawkshaw, president, in the chair, the first paper read was on "American Timber Bridges," by Mr. J. R. Mosse. It was stated that the early common road bridges, for spans of 100 feet and upwards, were generally built on the lattice plan. The sides and the top and bottom chords were formed of planks, usually 12 inches wide by 3 inches thick, fastened together by oak treenails 2 inches in diameter. For road traffic, with moderate spans, this kind of bridge answered tolerably well; and several of the early railway bridges were constructed in a similar way. But this structure, having been found insufficient for heavy trains, had long since been abandoned; though it was sometimes, but erroneously, thought in England to be the general style of American bridges.

The next design noticed was the Howe bridge, a detailed description being given of one on this principle on the Danville railway, over the James river, at Richmond, Virginia. This bridge consisted of eleven openings, each 121 feet span, the total length being about 1,800 feet, with a width of 18 feet. For each span there were two trusses, the greatest depth of which was 20 feet. Each truss was divided into several panels 11 feet wide, and the bottom chords were so arranged that there should be only one joint in the chord pieces in each panel. The sectional area of the upper chords was 396 square inches, and of the bottom chords 528 square inches; the greater area of the latter being on account of the numerous joints. There were four main braces at the ends of each truss, and by means of three vertical iron tie-rods in each panel, any required camber could be easily given. Counter-braces were also introduced, by which, when keyed up, the bridge could be so stiffened, that a passing load was said to produce no additional strain. These bridges were always built of the best white pine; and the ordinary price for a single line, including erection, was from 4*l.* to 5*l.* per lineal foot. The usual quantity of timber employed was about 30 cubic feet per lineal foot, and the weight, including iron work, a little more than half a ton per lineal foot. Assuming a load of 3,000 lb., including its own weight, to be uniformly distributed over the bridge alluded to, the strains would be, by the ordinary calculation,—

On the upper chords, compression,	729	lb. per square inch.
" bottom chords, tension ..	547	"
" end braces, compression	735	"
" end tie-rods, tension ..	15,125	"

The ordinary dimensions of a bridge on this principle having a span of 150 feet, as built on the Portland railway, were then given, from which it appeared that, the lower chord pieces of the two trusses had together a sectional area of 676 square inches, and of the upper chord pieces of 520 square inches. Assuming the same weight of 3,000 lb. per lineal foot, to be equally distributed over this structure, the strains would be,—

On the upper chords, compression,	901	lb. per square inch.
" bottom chords, tension ..	694	"
" end main braces, compression	750	"
" end tie-rods, tension ..	18,750	"

These strains were greater than in the first example, and the compression of 901 lb. per square inch on the upper chords was the limit of safety; but it was not probable that the bridge would ever be loaded to the amount assumed.

Owing to the increased weight of the trains, and the greater span of railway bridges, it was afterwards found necessary to strengthen this form of bridge, by the addition of arches on the sides of the trusses. This "Improved Howe Truss," as it was usually called, came into general use. A bridge on this plan was described, which was built for a double line on the Philadelphia and Reading Railway, where it was subject to the heaviest traffic in America, the coal conveyed over it alone exceeding 5,000 tons daily, besides the ordinary passenger and goods trains. This bridge had a clear span of 160 feet. There were three trusses, each 23 feet deep, and six arches. The sectional area of the three upper chords was 1,215 square inches, of the bottom chords 1,620 square inches, and of the six arches 1,530 square inches. The arches were formed of the best pine, in pieces about 24 feet long by 4½ inches wide and 15 inches deep. Timber arches had not unfrequently been built of pieces 6 inches square; but very rarely of laminated plank in the manner formerly practised in England. Supposing a load of three tons per lineal foot, including the weight of the structure itself, to be equally distributed over this bridge, and to be borne both by the upper chords and the arches; then the compressive strain per square inch would be 292 lb. on the former, and 237 lb. on the latter; while if sustained by the arches alone, the pressure would only amount to 468 lb. per square inch. As American engineers usually considered 900 lb. per square inch as the safe limit of compression on timber framing, the strength of this bridge appeared, by calculation, to be greatly in excess of what might be deemed necessary.

The approximate quantities of materials in this bridge, exclusive of the roof, were, per lineal foot, 58 cubic feet of timber, 270 lb. of wrought iron, and 76 lb. of cast iron; and the cost of the superstructure amounted to 10*l.* 3*s.* per lineal foot.

These bridges were usually built with a camber of about 1 foot; but owing to decay at the joints, and the unseasoned state of the timber when framed, they soon deflected, and did not last in good condition longer than from twelve to fifteen years. When, however, they were roofed in and boarded at the sides, and were properly cared for, their duration might be taken at twenty-five years.

Some American engineers did not approve of the arch in combination with the truss, believing that a structure composed of two systems, neither of which was strong enough by itself, was wrong in principle, and that it was almost impossible so to proportion the strains, as to make each system bear its due share. These engineers thought it better, either to add to the truss the material used in the arch, or to depend entirely upon the arch, and to have a light truss merely to stiffen the roadway.

Timber-bridge building had become a special branch of engineering in America, and one firm alone—that of Mr. D. C. McCallum,—had constructed 15 miles on length of bridges upon different railways, in spans varying from 30 feet to 260 feet. These bridges were built on what was termed the "Inflexible Arched Truss" principle; and a description was given of a bridge, for a single line of railway, 200 feet span, of which several had been erected in the States of New York, Ohio, and Mississippi. The principal dimensions were, total length, 210 feet; span, 200 feet; depth of truss in the centre, 26 feet, and at the ends, 21 feet. The arched tops of the two trusses had together a sectional area of 814 square inches, and the two bottom chords of 468 square inches. There were four main braces, which projected 32 feet from the piers, having a sectional area of 704 square inches on each side. The posts, of which there was a double row, inserted between the chords, varied from 9 inches by 13 inches at the abutments, to 9 inches by 6 inches at the centre; the counter braces being 9 inches by 6 inches throughout. Special attention was directed to the manner in which the bottom chords were scarfed, by long splicing pieces and combination keys, so as to prevent them, as much as possible, from stretching. The spur arch braces also transferred the load directly on to the abutments, by which the span was directly reduced to 136 feet, so far as the strain on the truss was concerned. This bridge contained 7,360 cubic feet of timber, 6,958 lb. of wrought iron, and 5,997 lb. of cast iron. Its total cost was 5*l.* 4*s.* per lineal foot; the rough timber being delivered on the site of the works at one shilling per cubic foot. The total weight, including the permanent way, was 109 tons, and with an additional load of 205 tons, equally distributed, the pressure on the arched top would be 862 lb., and the tension on the bottom chords would be 1,500 lb. per square inch. With an actual load of nearly one ton per lineal foot, this bridge deflected nearly three-quarters of an inch, previous to the adjustment of the counter braces: these were then screwed up, and the load was removed, when the permanent deflection was found to be nearly five-eighths of an inch.

Several railway swing bridges of 120 feet span had been constructed of timber by Mr. McCallum,

and the principal dimensions, as well as detailed drawings, of one on a similar plan, proposed to be erected over the Mississippi river, at Clinton, Ohio, were given. A McCallum common road bridge, of 150 feet span, was then described; and it was stated that the quantity of timber in such a bridge, 29 feet in width, did not exceed 23 cubic feet per lineal foot, its entire cost amounting only to 3*l.* 2s. 6d. per lineal foot, the rough timber delivered on the ground being estimated at ninepence per cubic foot.

As an illustration of the adaptation of the Howe Truss for large roofs, a description was given of that erected at the Dunkirk station of the New York and Erie Railway, the span of which was 80 feet. This roof was chiefly remarkable for the lightness of the scantlings, only two pieces of timber being as large as 6 inches by 7 inches, and most of them were about 5 inches by 7 inches. A principal of this roof contained 280 cubic feet, and would cost, at the ordinary price for timber framing, including erection, about 36*l.*

In conclusion, the author expressed the hope that these specimens of timber work, the result of many years' experience, and the adaptation of the only available resources of a new and comparatively poor country, would be found interesting, as, whatever their merits or faults, the bridges had undoubtedly produced good practical results, and would bear investigation.

The second paper read was "On the Reconstruction of the Dinting and the Mottram Viaducts," by Mr. W. Fairbairn, F.R.S.

On the 3rd inst., the paper read was on "The Perennial and Flood Waters of the Upper Thames," by the Rev. J. C. Clutterbuck, M.A.

TO CALCULATE STRENGTH OF WROUGHT-IRON GIRDERS.

IN reply to our correspondent "W. J. M.," who asks for a formula to determine the strength of wrought-iron girders, and the intimation may be useful to others also, we may point out that the subject is fully investigated in the eleventh vol. of the *Builder*, for the year 1853, at pages 646, 677, 729, by Mr. E. W. Tarn, M.A.

All who seek information on matters connected with architecture and construction should look to the back volumes of the *Builder*, which contain, we may venture to assert, an immense amount of such information absolutely essential.

In reply to "W. J. M.'s" inquiry, I beg to refer him to "Fairbairn's Treatise on Wrought and Cast Iron," where he will find the following formulæ, and much other matter of great value —

"Multiply the section of the top flange, the depth of the web, and the width of the bottom flange by the constant 75, and divide by the distance in inches between the supports. The product will be the breaking weight in tons. This applies to web girders. For box girders, the constant 80 is used. The formula for trellis girders is nearly the same as for tubular beams (or 'box' girders), and will generally serve." GEO. T. ROBINSON.

P.S. Will some correspondent kindly favour me with the composition of the black and coloured cementitious inlay now much used in incised stones, and inform me if it may be relied upon to stand out of doors.

THE SANITARY CONDITION OF ROMSEY.

AT a recent meeting of the Town Council and the Guardians of the parishes of the Romsey Union, the mayor read a letter from Lord Palmerston on the sanitary state of the town, urging the desirableness of adopting "Mr. Taylor's patented plan for the preventing of nuisances," or of some other, which might be found to be most desirable.

The chairman of the board of guardians (Mr. May) said the sanitary state of the town was not such as justified the sending of such a letter by Lord Palmerston; but it was evident (though by what means he would not pretend to say) that Lord Palmerston knew more of the private affairs of this town than they did themselves. The extraordinary weather we had had this winter fully accounted for the cases of illness which had occurred; but he fully believed that Romsey would bear comparison with any town in England as to its general healthiness. The chairman afterwards said there had been a disposition to lessen the number of cottages near the town; and this step, of course, drove the labourers into the town. In one district he knew that thirty-two cottages had been pulled down and only six built; mainly, he believed, for the protection of game. As to Mr. Taylor's plan, he (Mr. May) would engage that in such a place as Church-court, at a very small expense, *if* the inhabitants would just throw ashes into their closets, these places would be perfectly free of any noxious vapours. As to the cottage accommodation, he could undertake to say that throughout the Romsey Union there were not more than two-thirds of the accommodation that the labourers ought to have.

Mr. Arnold said he thought perhaps Lord Palmerston's impression of the state of the town was gathered from its appearance last autumn, when the canal was dry, and accumulations of filth to be seen in many parts of the old canal watercourse; but now, as the water had been turned into its old channel, the whole of the Hundred could be well flushed, and accumulations of dirt were no longer to be seen.

After further discussion, the following resolution was passed:—"That the town clerk do inform Lord Palmerston that the council, having conferred with the guardians of the Romsey Union on the subject of his Lordship's communication of the 12th ult., respecting the sanitary state of the town, is, with the guardians, unanimously of opinion that bringing the Public Health Act, 1858, into operation in this town, is unnecessary, the powers of the Nuisances Removal Act being already in efficient and satisfactory working."

THE SANITARY CONDITION OF ROTHERHAM.

THIS unfortunate town had just made its escape from a deadly typhoidal attack, under which it had of late been suffering from well-known causes connected with its defective supply of water, and its hence uncleansed and filthy drains and sewers; when a new and worse form of illness has manifested itself in an epidemical form. This new infliction is what an intelligent medical man, who is resident in the town, declares, from his experience in tropical countries, to be a mild form of the terrible yellow fever. It is called epidemical jaundice.

From a remarkable letter which this gentleman, Dr. Reed, has written to Dr. Ord, medical officer of the Metropolitan Board of Health, at the special request of Dr. Ord, who had visited the town, but failed to see Dr. Reed, with whom he was anxious to have a consultation on the subject, it appears that the general health of the community at Rotherham is deplorable. Dr. Reed speaks of "the extraordinary prevalence of severe neuralgic affections, dysenteries, liver complaints, and numerous distressing and incurable dyspeptic diseases, besides that obscure continuance of ailment which is called 'ill-health,' and from which no resident is exempt." All of these he attributes to one and the same cause.

The very complexion of the "healthy," if they can be so called, he describes as "sallow, or of a peculiar insipid tawny white, which presents to a stranger a very striking and singular appearance," strongly resembling the general aspect of the inhabitants of unhealthy tropical towns. Sometimes the visage is stained of different hues; and in some few cases it is even livid, while the flesh is found to pit on pressure; the muscles being soft, yielding, and elastic, with often an appearance of unhealthy fat, containing water in the cellular membrane. The young in years are old and wrinkled, and even children have an aged appearance. The general mortality of Rotherham is shown from the official returns to be no less than 44 in 1,000; and the deaths are more numerous than the births, which are falling off; so that it is only by immigration that the population is kept up. The havoc committed by epidemic cholera, says Dr. Reed, "is as nothing compared with the slow and gradual destruction from our poisonous sewers in their work of depopulation here."

Dr. Reed conceives that besides a fuller supply of water, and a thorough cleansing of drains and sewers, "a sweeping alteration in the whole of the sanitary police" is requisite to the establishment of an improved state of health in Rotherham.

HANLEY SCHOOL OF ART.

THE annual meeting of this institution was held on the 23rd ult., in the Town Hall, Hanley. The productions of the advanced students, and of those who gained prizes in the recent examination, were exhibited as usual, and attracted a good deal of attention. Among the articles exhibited was a collection of modelling designs, including the models of the jugs and cups and saucers which won the prizes offered by Alderman Copeland. The report expressed the satisfaction of the committee with the advancement made by the students under the able teaching of the master, Mr. Carter. The trustees had become personally responsible for the paying off of the mortgage debt of 1,000*l.* this month, although from 300*l.* to 400*l.* deficient in funds. The master's report stated that, on examination of the works executed during the year, twenty-eight medals had been awarded; and that twenty works had been selected for the national competition. The receipts, according to the financial report, amounted to 130*l.* less than the expenditure, which was 387*l.* Alderman Copeland occupied the chair, and he and various other gentlemen addressed the meeting, including Mr. S. Child, who, in reference to the special manufactures of the district, said:—Perhaps no manufactures could be traced back to so early a period as works in clay. No doubt other manufactures were also of ancient date: they had heard of workers in metals, forgers of swords, and makers of musical instruments; but they had passed away with the fashion thereof; whereas even the sun-dried bricks of Egypt existed to this day. The records of Assyria were brought to light; and Layard and others had found in the palace of Sennacherib 2,000 examples of clay books, giving the history of Assyria. He believed that in China the manufacture in clay could be traced back 2,000 years, but in this country it was of comparatively recent introduction. After a brief allusion to Brindley, whom the speaker said he might almost term the inventor of canals, he remarked that not many years ago articles of earthenware were imported into this country from France; but a change took place; a man of genius arose, who was born at Burslem. That man had great talents: he could see perhaps further than his neighbours: he made great discoveries in the chemical composition of the materials; and no doubt had a taste to see that a great advance might be made in the artistic form and the quality of the articles produced in this neighbourhood. That man sought for the best talent the country could produce. After Flaxman failed in obtaining the gold medal of the Royal Academy, he was employed by Josiah Wedgwood, who greatly extended the fame of the Potteries; and whose memory he trusted would be honoured by all then present attending the inauguration which was to take place on the following day. Wedgwood well deserved his fame: he prospered in his undertaking; and in his prosperity that of the neighbourhood had largely participated. But, he might observe, however intelligent Wedgwood might have been, whatever plans he might have had, he could not have stood alone. He might have had a head to conceive and a desire to execute the works which had made his name famous; but without such men as Flaxman, intelligent artists and clever workmen, they should not have had to celebrate such an occasion as they were about to do on the morrow.

CHURCH-BUILDING NEWS.

Ipswich.—The church of St. Lawrence, Ipswich, has been re-opened. This is the second time within a few years that the parishioners have effected improvements in their church. The first alteration consisted in the removal of the gallery which blocked up the chancel arch, in replacing the high pews of the chancel with benches, and in inserting the east window, given by Mr. F. Fish, in memory of his wife. Those just completed by the builder, Mr. H. Luff, from the plans of Mr. R. M. Phipson, the architect, are much more extensive. The former alterations were confined to the chancel. The nave has now been divested of its plaster ceiling, and a roof of stained fir takes its place. This roof is supported by principals which spring from stone corbels, executed by Mr. Frewer, of Ipswich. The old pews have been supplanted by pine benches merely varnished and polished. A passage has been made on either side of the centre benches, which take up the greater part of the nave; and parallel to the north and south walls are two rows of stall benches, ornamented at intervals with carved poppy-heads. The organ-gallery has been done away with, and the new organ has been placed on a platform raised a foot or two above the floor of the church; in front of it being the choristers' benches. The nave is lighted by gas branches of blue and gold. The chancel is lighted by two brass standards, each with twenty lights, to match the altar-rails. The vestry has been enlarged, and an entrance made from the churchyard. The brickwork of the east gable of the nave has been faced with flint, and a stone cross surmounts it. The whole alterations have cost something like 1,000*l.*

Bungay (Suffolk).—The first portion of the contemplated restoration of St. Mary's Church is now completed. On examination it was found that the north side, which is of about the fourteenth century, had suffered much from the ravages

of time; and the mullions of the window, being chiefly of a soft stone, had been in many places so much worn away as to become almost dangerous. The mullions and tracery of these windows have been restored with Bath stone. The old glass also has been removed, and the centre light of each window has been filled in with painted glass: the subjects of five of them illustrate the leading events in our Saviour's life; viz., the Birth, Baptism, Last Supper, Crucifixion, and Resurrection; the side lights being filled in with cathedral tinted glass, with a white border. The tracery of the windows contains in each of the compartments separate designs; these being the flowers of different nationalities, and intended to commemorate the Industrial Exhibition of 1862, at which the subjects before named were purchased. The sixth is a memorial window, the painted glass for which was presented by Mr. Richard Mann, of Bungay, and other members of his family. The subjects of this window illustrate the acts of mercy—"Hungry and ye fed me," "Thirsty and ye gave me drink," "Naked and ye clothed me," "A stranger and ye took me in;" and the compartments are filled in with monograms and varied designs. Two windows in the north porch which had been blocked up for many years have been restored and glazed, as also the stone seats, the bases of the columns, and the four columns supporting the four corners of the porch. The north side of the interior of the church was covered with a thick coating of white plaster, the accumulation of several years; and round the mural tablets, which are numerous and ancient, the old-fashioned plan of painting a deep black line, to make the monuments stand out more prominent, also existed. This and the plaster were removed, and in doing so some discoveries were made. Around each of the windows was discovered an arch of stone, very deeply moulded, and terminating at the basis in hexagonal stops, with splays running the whole width of the window: these arches were much disfigured and broken. They have been restored. A gallery has been removed, thus exhibiting the whole proportion of the aisle; and open seats for about thirty persons occupy the place where the stairs leading to this gallery stood. The north and west approaches to the church have also been lowered, and the accumulation of soil against the walls has been removed. The total cost of the repairs, &c., has been about 400*l.*; and the work has been carried on by a committee, with the incumbent and the churchwardens. The painted glass in the five windows was executed by Mr. Gibbs, of London; and the stonework was entrusted to Mr. Henry Nursey; and the glazing to Mr. S. Redgrave, both of Bungay.

Nottingham.—St. Luke's Church has been consecrated. The edifice has been erected from the plans and under the superintendence of Mr. R. Talland, of Nottingham, architect. It is a plain, unpretending structure, built of Bulwell stone, having Derbyshire stone dressings to the doors, windows, buttresses, and strings, and carved into heads and bosses at the springing of the arches. The style is Early English. The roof internally is in open one, exhibiting timbers stained and varnished. The internal dimensions are in length 62 feet 6 inches, exclusive of the apse: it has a vestry and a steeple at the east end; and the width of the church is 55 feet 6 inches. The aisles are paved diamondways with black and red tiles; and the seats, which are of deal, stained and varnished, contain sittings for about 900 persons, half of which are free. The sum of 4,500*l.* has been expended upon the site and building. Mr. Dennett was the contractor.

Prior's Marston (Warwickshire).—A faculty has been obtained for restoring and reseating the parish church by subscription. At present it is contemplated to reseat the body of the church, re-roof of the nave, and partially rebuild the south wall and porch with new windows. If sufficient funds are provided the north aisle will be rebuilt. The chancel is new, having been erected at the expense of Earl Spencer. Messrs. Elliott & G. Lilley are the builders, and Mr. N. Joyce (Spragg & Joyce), of Stafford, is the architect.

Old Whittington (Derbyshire).—The new church for the parish of Old Whittington has been opened by the Bishop of Lichfield. The accommodation for the old church having been found inadequate, a new church was proposed; and a fund having been raised in 1861, several architects were invited to furnish designs in competition; and that by Messrs. Giles and Brookhouse, of Derby, was finally adopted. The tender of Mr. J. W. Thompson, of Derby, builder, was accepted for the erection of the edifice. The church consists of nave, north and south aisles, with chancel: on either side is a vestry and organ chamber with arches, the former being enclosed with a rich traceried wood screen. The tower, situate at the south-west angle, forms a porch containing the principal entrance, and is surmounted by a broach stone spire about one hundred feet in height. The walls are faced with Wingerworth stone, relieved by white stone dressings. The high-pitched roofs are formed with principals containing traceried spandrils and curved ribs supported on stone corbels, the whole of the exposed wood-work being stained. The sittings (600) are all open and free: they are of deal stained and varnished, and formed with sloped backs and seats. The chancel floor is laid with ornamental tiles, made by Mr. Whetstone, of Coalville, Leicester: those of the aisles are laid in red, blue, and buff tiles, in diamond pattern. The church has been warmed with hot water. The style of the edifice is Geometrical Gothic, and the cost is not expected to exceed 2,200*l.* The east window has been filled with a design in stained glass by Warrington, of London, presented by Miss Smith, of Beauchief Hall, who laid the first stone, and Miss Smith of Leek (late Dunston Hall).

Birmingham.—The new Congregational Chapel in the Lozells has been opened. The chapel, which is built of brick, is situate in Wheeler-street. The general style is Italian. In front there is a portico formed by four pilasters, which, surmounted by Corinthian capitals, support a semi-circular arch. In the interior there are two galleries, one of which is ten and the other twenty feet from the ground floor. Each end of the chapel is circular, thus giving it the appearance of being oval. The internal dimensions are 80 by 53 feet. Seats are provided for 1,200 persons, 400 being on the ground floor, 500 in the lower gallery, and 300 in the upper gallery; but with standing room, there is accommodation for 1,500. In the arrangement of the ground floor chairs are substituted for pews, and the floor is covered with carpet to facilitate kneeling during prayer. Owing to the circular form of the chapel, and the absence of columns, there is in every part an uninterrupted view of the pulpit. The building is supplied with Muir's patent four-point ventilators; is heated by Haden with warm air; and is lighted by twelve small gaseliers pendant from the ceiling, and by brackets under the galleries. There is no organ. Messrs. Poulton & Woodman, of Reading, were the architects: Mr. F. D. Johnson, of Birmingham, was the local and superintending architect; and Mr. Bennett, of Lozells, was the builder. The cost of the building is about 3,500*l.*, of which there have been raised upwards of 2,500*l.*

Liverpool.—St. John's Wesleyan Chapel, situate in Prince's Park, has been opened for Divine service. The chapel is in the Early English style. The stonework is principally of Yorkshire shodders, with Cheshire dressings. In extreme inside length the chapel is 89 feet long by 39 feet 6 inches wide; and consists of a nave, two transepts, an organ gallery, and transept galleries. The roof is an open timber one, stained and varnished. There is an organ, made by Willis, of London; and at the west end there has been placed a stained glass window, the gift of Mr. Farnworth, of Liverpool, commissioned by that gentleman from France. The chapel is capable of holding 1,000 persons, 250 free. The foundation stone was laid in October, 1861; and the entire cost of the edifice, it is understood, will amount to nearly 7,000*l.*——The extensive cemetery at Anfield Park comprises about 87 acres, besides 43 acres outside, which also belongs to the burial board. The principal entrance-gate is situate at the angle of junction of Mere-lane with Priory-road, Anfield-road, and close by Leigh-terrace. This gateway, says the *Albion*, in describing the cemetery, is divided in the middle by a tall clock-tower, of Gothic architecture. On each side there is a gatehouse, which, as well as the posts and clock-tower, are constructed of red sandstone, and all of them present kindred architectural features. From this entrance-gate a straight, wide, level avenue leads east to the chapel belonging to the Church of England. In almost immediate proximity to this gate, a wide level avenue curves off to the right hand, which, sweeping past the registrar's house and offices, leads south-eastward to the Non-conformist burying-ground and its chapel. Starting from the same point, in an opposite direction, a similarly-curved avenue leads north-eastward to the Roman Catholic burying-ground and chapel. The group of building which constitutes the registrar's house and burial-board offices is Tudor in style. Each of the three chapels externally presents features of a similar character. They are all of the Pointed Ecclesiastical style, and each is ornamented by a tall spire, all of them being built of the red sandstone already spoken of. At each end of the Church of England chapel workmen are busy in the building of a range of catacombs, which, when completed, will group less or more in combination with the chapel, and so, in a great measure, change the architectural arrangement of the composition. The chapel here referred to is larger than either of the other two. It is seated for the accommodation of 400 persons. The ranges of catacombs, which contain a ground and a sunk story, are capacious and well arranged. Each range is divided into two portions, those nearest to the Church of England chapel being designed for the reception of the bodies of members of that church; while the northern half of the north range is intended for Roman Catholics, and the southern half of the south range for Non-conformists; the different divisions of these ranges of catacombs being thus placed in nearest contiguity with the chapels to which they respectively belong. The cemetery has been acquired and laid out at a cost of nearly 100,000*l.*; of which between 50,000*l.* and 60,000*l.* were expended on the site, inclosing, and draining; 20,000*l.* to 30,000*l.* in preparing and laying out the surface; and 13,000*l.* in building the three chapels.

STAINED GLASS.

St. Alban's Church.—A stained glass window has been erected in the north aisle of St. Alban's Church, in memory of the late Mrs. Nield. The window consists of three lights and tracery, and is of the Decorated period. The subjects represented are "The Resurrection of our Lord," "The Raising of Dorcas," and "The Raising of Jairus's Daughter."

Powick Church.—Some windows have just been erected in this church; one at the east end of the chancel, also a south Decorated window and two north Early English lights, all within the altar rails. The windows are by Messrs. Lavers & Barraud, of London. Seven incidents in the life of our Lord are the subjects of the east window. The south and north lights contain respectively the calling of St. Peter and his release from prison, and the figures of St. Peter and St. Paul. The ground-work of all is of mosaic character. The tie-beams of the chancel interfere considerably with the effect of the window, but it was found impossible to remove them, except at greater cost than that of a new roof.

Bath Abbey.—The proposal to place a stained glass window in this abbey, in memory of Bishop Carr, formerly rector of Bath, has been favourably received, and the committee have already received encouraging promises of support.

Battlefield Church, Salop.—The old window at the east end of the choir of this church was, at the re-opening, filled with ordinary house glassing, with some few fragments from an old window, long demolished, interspersed. Of the old glass sufficient remained to show that the life of St. John the Baptist was the subject treated. As it was impossible from such slight materials to restore the window, the subject of it being also inappropriate, a new window, illustrative of events in the life of St. Mary Magdalene, to whom the church is dedicated, was decided upon, and the commission was intrusted to Messrs. Lavers & Barrawd, of London, by Lady Brinckman. As the window is of five lights, and like the church of Perpendicular character, five principal events in the life of St. Mary Magdalene have been selected for illustration; viz., "Mary at the Feet of Jesus," "Washing the Saviour's Feet with her Tears," "Following Jesus bearing His Cross," "The three Maries going to the Sepulchre," and "Jesus appearing to Mary in the Garden after his Crucifixion." These subjects are surmounted by canopies, and the space above and below is filled with varied compositions of emblematic floriated work. The centre picture, that of Christ bearing his cross, is relatively elevated. The small compartments in the head of the window are filled with figures of prophets and evangelists, on blue ground, and floriated work on ruby. This completes the series of stained glass windows in the church; twelve large and one smaller windows having been previously filled at the expense of her ladyship by the same artists. Lady Brinckman continues her restoration work, the latest advance being the restoration of the tower parapet and pinnacles. She has added a stained glass window, by Mr. Evans, of Shrewsbury, to the mortuary chapel, adjoining the church. A parsonage has also been erected, and improvements generally effected.

Bosley Church.—A memorial window has just been inserted in the south side of Bosley Church, executed by Messrs. Edmundson & Sons, of Man-

chester, for the late Earl of Harrington, of Elvaston Castle, near Derby, the landed proprietor. The expense of it has been contributed to by personal friends and the tenantry of Gawsworth and Bosley. The window is disposed in four pictorial spaces, the centre and principal of which is occupied by an illustration of the parable of the "Good Samaritan." The four minor pictures illustrate four acts of Christian charity, namely, "Feeding the Hungry," "Clothing the Naked," "Visiting the Sick," and "Giving Drink to the Thirsty." In the spaces above the pictures the sacred monogram, "I. H. S." is introduced with the "Alpha" and "Omega,"—the First and the Last; and in the apex of the window is a figure of an angel bearing a scroll, inscribed "Gloria in Excelsis Deo." At the base of the window the armorial bearings of the deceased are emblazoned with the inscription.

PROVINCIAL NEWS.

Sevenoaks.—A public meeting has been held, and a provisional committee appointed, with the view of forming a water company for the supply of Sevenoaks.

Worcester.—A new recreation-hall has been erected and opened at the County Lunatic Asylum at Powick. The old hall, which was formerly used as the chapel, was so confined in its proportions that it had become quite inadequate to the accommodation of a largely-increased number of patients to participate, at the same time, in that diversion of the mind by amusements, which has so beneficial an influence in alleviating and promoting the cure of insanity. In consequence, Mr. Rowe, the county surveyor, was instructed to prepare plans for the erection of a new one, which should provide the increased amount of accommodation necessary. Messrs. Wood & Son have erected the building. The room is about 70 feet by 43 feet wide, having a semicircular ribbed roof proportionately high, the springings of which are supported by pilasters. At one end is a recess, fitted up with a stage and other appliances, for the purpose of giving dramatic or other entertainments; and at the opposite end is a gallery, which affords additional accommodation if required. About 500 can be conveniently seated.

Aberystwyth.—A new company is being formed for the purpose of erecting a promenade and landing pier. The Local Improvement Commissioners have unanimously agreed to give every facility to the carrying out of the project. The next step is to obtain the consent of the Admiralty; and the company will be then registered under the provisions of the Limited Liability Act, and the works proceeded with. The proposed pier will be constructed of iron, and the design is ornamental. At the lower end of Pier-street an entrance will be erected, having a pagoda roof, surmounted by a flag-staff. The roadway will be supported by cast-iron pillars fastened in the rock below and the whole will be surmounted by a light iron balustrade. At the extreme end another small building is to be erected. It will be built exactly in a line northward with Pier-street, about 250 yards to the sea, and will be 15 feet wide and 12 feet 4 inches above high-water mark. It will be similar to the one lately erected at Deal. The Company's engineer is Mr. E. Birch, of Westminster. A similar scheme is in contemplation at Llandudno, North Wales, planned by Messrs. Wyatt & Metcalfe, of Westminster.

Turnditch (Derby).—Through the exertions of the incumbent and inhabitants a fund is being raised to erect a new parsonage. A sum having been collected, it was determined, says the *Derby Advertiser*, at once to proceed with the building; and the contract of Messrs. W. & C. Bridgart, of Derby, was accepted, from designs furnished by Messrs. Giles & Brookhouse, architects. Half an acre of land has been given by the Right Hon. Lord Scarsdale for the site, which commands an extensive view. His lordship has also laid the foundation stone.

Burton.—The foundation-stone of the new bridge in place of the very old one built by the monks of Benton Abbey in Saxon times, has just been laid. The new bridge is to be a stone structure, consisting of thirty-two arches; and the width of the carriage road is to be 20 feet, besides two footpaths.

Sheffield.—In their report, the directors of the new Victoria Hotel state that the building is completed. The special foundations, which the nature of the site had rendered necessary, had been put in by Messrs. Craven, under the direction of Mr. Hadfield (the company's architect), who previously took the advice of Mr. John Fowler, C.E. The hotel has been built by Messrs. Chadwick. The stables, which it had been decided to erect, would be completed by the end of March. The cost of the hotel and stables had involved an outlay larger than the subscribed capital.

Doncaster.—The Town Council have at length taken a decisive step towards a further improvement in the markets. The vacant space lying between the Corn Exchange and the road known as the Back-lane, comprising an area of 1,870 square yards, is forthwith to be converted into a covered market for the sale of wool during the season, and at other times for the sale of sheep, for which purpose portable pens will be provided. The roof will be similar to that of the Corn Exchange, supported by cast-iron pillars and girders, and glazed at the top. The side next the Back-lane, and also the one adjoining the property of Mr. Rhodes, will be built up; the others being left open, with the exception of an iron palisade and a gate fronting the Corn Market. The cost of the whole is estimated to approach nearly 2,000*l.* When completed, it is purposed to have pens for the sale of cattle and sheep in the Parsonage-yard; and other works affording extended accommodation will be commenced.

Rotherham.—At the usual meeting of the local board, a letter was read from Mr. James Yates, of Oakwood House, in reference to the proposed supply of water to the town, in which he observed that as many difficulties arose in reference thereto he would suggest the following scheme for the consideration of the board:—That a filter should be formed in the bed of the river, or in land now unoccupied and partially excavated near the works, with such arrangements as to allow the present pumps to lift the water from it, and at the same time force it through the present pipes into an additional reservoir at Boston Castle or at Moorgate. This letter had been forwarded to Mr. Lawson, C.E., who, reporting upon it, expressed an opinion that the plan proposed by Mr. Yates would be exceedingly inconvenient, complicated, and unsatisfactory in its working. The board decided to inform Mr. Yates that his plan was considered impracticable.

Wearmouth.—A loan of 100,000*l.* has been granted by the Loan Commissioners for the contemplated dock extension on the Wear.

Leith.—The new graving dock, just finished at Leith, has been publicly opened. This dock is of large dimensions, being 380 feet in length and 70 feet in breadth, and is spacious enough to accommodate vessels of the largest tonnage.

THE ARCHITECTURAL ASSOCIATION.

THE usual meeting of members was held on Friday evening (the 6th inst.), at the House, in Conduit-street.

The chair was taken by the president, Mr. Blashill.

The following gentlemen were, on ballot, elected members of the Association:—Mr. Parsons, Admiral-terrace, Pimlico; Mr. B. Fletcher, jun., 28, Great George-street, Westminster; and Mr. H. A. Reeves.

The President announced that, since the last meeting, arrangements had been completed for forming a class in connexion with architectural examination; and that certain rules had been agreed to by the committee for its government. Members joining the class would be called upon for the payment of a small fee (five shillings each), to defray the necessary expenses, which it was hoped would not be objected to. The class would be conducted under the president and vice-president, and the secretaries would be the honorary secretaries of the class of design (Mr. E. J. Tarver and Mr. L. W. Ridge). It was considered by the committee most desirable to invite the assistance of Mr. Tarver, whose experience in the class of design was considerable. The President concluded by expressing a hope that a large number of members would avail themselves of the class, which he believed would be found most useful, especially to those who desired to pass the architectural examination with advantage to themselves and credit to the Association.

Mr. R. Phèné Spiers then read an elaborate notice, illustrated with diagrams, entitled "The Architecture of Napoleon III.," and which had mainly reference to the rapid development of Parisian improvements since the accession of the present Emperor.

At the conclusion a brief discussion ensued, which terminated in a vote of thanks to Mr. Spiers for his paper.

It was announced that the next drawing in the class of design would be an oriel window, or bay window with shutters; and that, at the meeting on the 20th inst., a paper would be read by Mr. R. O. Harris; the subject Gothic Woodwork.

Books Received.

The Law of Art Copyright: with Introduction, Notes, and Appendix. By E. M. UNDERDOWN, Esq., of Inner Temple, Barrister-at-Law. London; Crockford, Wellington-street, Strand. 1863.

THIS is a useful and trustworthy compendium of the various Acts relating to engraving, sculpture, designs, paintings, drawings, and photographs; and copyright, national and international. The appendix contains the evidence communicated to the Society of Arts on piracy of works of art, and forms for the use of artists, &c. There is also a table of cases cited. The work is dedicated, by permission, to the Lord Chancellor.

The Act protecting painters, draughtsmen, and photographers, is that which has just been added to the statutes securing to the authors and originators of works of art the copyright in their productions. This is a new and important step towards the completion and perfection of the series of parliamentary enactments on the subject of art-copyright. From the time of Hogarth, who caused the first Bill to be proposed, as remarked by Mr. Underdown, these statutes had gradually extended and facilitated the remedies of engravers, designers, and sculptors, against piracy, but had strangely omitted the right of painters as such, and only affected them as designers or painters of dioramas. Nor did they, on the other hand, secure the public from the frauds of copyists and imitators; nor from the results of some questionable practices of artists themselves in *repeating* works already disposed of, and of signing those which they had not executed. The criminal law also gave but little protection, as it had been decided that the affixing a false name to a picture was not a forgery.

The Act which forms the foundation of the present work seems to provide against most of these frauds; but the whole question cannot yet be considered settled. What is wanted is that the numerous Acts now in existence should be made to give place to one clear and comprehensive Act in which, moreover, the claims of architecte, as we have before now urged, should not be overlooked. Mr. Underdown's volume is opportune.

Evidence as to Man's Place in Nature. By T. H. HUXLEY, F.R.S. Williams & Norgate, Covent Garden. 1863.

MR. HUXLEY, with an enthusiasm which every one must admire, however much differing from him in some of his conclusions, styles his present and favourite subject "the question of questions for mankind,—the problem which underlies all others, and is more deeply interesting than any other,—the ascertainment of the place which man occupies in nature, and of his relations to the universe of things." But admitting that the "*Nosce teipsum*" is the most important of all subjects to man; this significant emblazonment on the gates of ancient temples, when comprehensively and rightly understood, comprises much more than Mr. Huxley appears to accord to it. The origin of man, whether from apes or from dust, is a minor question altogether by comparison with the capabilities and destinies of his nature; and the author of the "Vestiges of Creation" took a more comprehensive view of this great question when he included within its limits, not only man's origin, whether in the womb of nature, or in that of his own more immediate parent, but *also his prospects*, as an inhabitant of the planet which, *at present*, he is the head. That author, at all events, did not overlook the possibility that man, as he at present exists, is not the highest form of human development,—that just as it has been supposed that the ape tribe are, as it were, the fœtus of mankind, still unborn into manhood, so may man be but the maturing infant on the way to a second birth, into a higher life upon the planet even than human life,—a life, may it be, of such Divine grandeur that we can as yet have little or no conception of its glory, as the crown of all creation? These, let us hasten to observe, are not quite the terms in which the author of the "Vestiges" speaks of such a possibility; but what he suggests is indicative of just such a splendid destiny for man, even upon the principles of development which are so repulsive in their nature to the minds of many. That there is good ground in Scripture for this prospect

phase of the "Vestiges" doctrine, whatever there may be as to the retrospective, seems to be evident enough, in many such passages as those allusive to "the whole creation groaning and travailing together in pain until now," that a new birth is to be accomplished, at "the restitution of all things," from a lost state of perfection which once existed on this planet, and which is again to exist, at the second and final coming (in man) of Him into the likeness of whose "glorious body" those who are alive at his coming shall "suddenly" have their "vile bodies" changed. Here is an organic and physiological "development,"—and by a special law of spiritual *election*, at least, if not by that of natural *selection*,—of which Mr. Huxley, perhaps, has little dreamt as yet; and this, let us suggest to him, is far more like "the question of questions for mankind," than the particular phase of it which alone he has yet discussed. The Lord of Life can raise up "sons" from the "dust,"—from the very "stones,"—far less from the inferior or fœtal orders of animal life; but the grand and prospective question is, what *are* these "sons of God," for whom "the creature waiteth," and who are to be "manifested" on the face of this very planet, which they are destined to "inherit" as "heirs," and no longer to pass from as "pilgrims?" and how may we attain to such sonship, or "hasten" its coming?

Reverting, however, to Mr. Huxley's support of Darwin's doctrine, we may quote a passage or two, from his present work, which shall more or less summarise his ideas to such of our readers as may not as yet know much of these crude germs, as we must call them (and as we doubt not Mr. Huxley himself regards them), of this peculiar doctrine of the origin and nature of man.

"On all sides I shall hear the cry,—'We are men and women, not a mere better sort of apes, a little longer in the legs, more compact in the foot, and bigger in brain than your brutal chimpanzees and gorillas.* The power of knowledge, the conscience of good and evil—the pitiful tenderness of human affections, raise us out of all real fellowship with the brutes, however closely they may seem to approximate us.' To this I can only reply that the exclamation would be most just, and would have my own entire sympathy, if it were only relevant. But it is not I who seek to base man's dignity upon his great toe, or insinuate that we are lost if an ape has a hippocampus minor. On the contrary, I have done my best to sweep away this vanity. I have endeavoured to show that no absolute structural line of demarcation, wider than that between the animals which immediately succeed us in the scale, can be drawn between the animal world and ourselves; and I may add the expression of my belief that the attempt to draw a psychical distinction is equally futile, and that even the highest faculties of feeling and of intellect begin to germinate in lower forms of life. At the same time no one is more strongly convinced than I am of the vastness of the gulph between civilized man and the brutes; or is more certain that whether *from* them or not he is assuredly not *of* them. No one is less disposed to think lightly of the present dignity, or despairingly of the future hopes, of the only consciously intelligent denizen of this world."

This last remark we must, in justice to Mr. Huxley, specially allude to, as indicative of something like a prospective glance after all, as well as a retrospective; but we are not aware that he has ever contemplated anything like such a distinct organic and physiological development of man's whole nature on the face of the earth as we have just indicated.

In respect to the much-mooted "hippocampus minor" question, we may here observe that there is a circumstance in connexion with the organization and development of the great brain which no one seems to have kept clearly in view in course of the discussion on this question. The great brain, as Tiedemann and other anatomists have demonstrated, is developed from before backwards; and what is called the middle lobe in fact originates in a great fold forward, from behind, of the cerebral membrane; so that the middle or lower lobe is in one sense the true posterior extremity of the great brain: a rough idea of this (apart, of course, from the crural radiations) may be had by folding a pillow, for example, so that one end shall underlie the remainder: this underlying end is comparable to what is called the middle lobe, which is, therefore, the true posterior extremity of the great brain, as opposed to the anterior extremity. It is not for us here to point out how such a fact may be brought to bear upon the great hippocampus minor question: we would merely suggest that it ought to be kept more distinctly in view than it appears as yet to have been.

Mr. Huxley's opinion as regards the antiquity of man may be gathered from the following passage: "The fossil remains of man hitherto discovered do not seem to me to take us appreciably nearer to that lower pithecoid form by the modification of which he has, probably, become what he is." The exceedingly ancient skulls lately found, in other words, he thinks, do not indicate anything like the discovery of "the missing link" between man and the ape tribes. And indeed, if the doctrine of the "Vestiges" be taken, that nature can retrograde as well as progress, how are we to know, even had these skulls denoted the existence of a race decidedly lower than the human, that that race was not a degradation or a retrogradation, or falling away, from a still more ancient state of higher development, such as even the most highly civilized of modern human beings have not as yet re-attained? Moreover, as one may legitimately argue, *ad homines*,—or taking the Vestigian and the Darwinian doctrines for granted,—why may not the ape tribes themselves be immediate or direct degradations or retrogradations of the human form, rather than immediate or nascent developments of still lower organisms? There has been plenty of time, *ex hypothesi*,—there have been millions, billions, trillions of years, during which mankind *may*, on this hypothesis, have come to maturity, fallen off, or retrograded, and again progressed; and such cycles may, on such an hypothesis, have even been over and over again accomplished. In short, if we are to be allowed to open up the question of man's origin at all, in the way the Darwinians and Vestigians have done, it is hard to say where we should, could, or must stop; especially since the facts and inferences as to the geological origin of granite seem to show that we have no trace whatever of the actual foundation and origin of the solid crust of the globe; the most ancient of all strata having probably been long since melted down into fluid granite on which the still remaining strata float.*

The Management of Steel. By GEORGE EDE. London: W. Tweedie. 1863.

THE best answer we can give to a "Working Man" who asks us how to temper without warping the tools he makes for himself is to point attention to this shilling's-worth of information on the subject. It is written by a practical man, and gives the result of personal experience in forging, hardening, tempering, and shrinking; also as to the case-hardening of iron.

VARIORUM.

"THE Six Standards of Arithmetic: Standard 2nd; containing a Graduated Course of Exercises in Numeration, Addition, and Subtraction; with Methods of Solving the Questions. By Walter McLeod, London: Longman & Co., 1863." Mr. McLeod is Head Master of the Model School and Master of Method at the Royal Military Asylum, Chelsea, and author of several other arithmetical works. The series under notice is designed for the use of schools and families; and from the simplification effected, it seems well adapted to the purpose in view. In an appendix is a note on the Roman notation which so much bothers the memory of every one, and for the refreshment of which memory we shall quote this note, with the exception of a table connected with it:—

"In the early periods of the Roman Notation, *four* was written IIII, instead of IV; *nine* was written VIIII, instead of IX; forty was written XXXX, instead of XL, &c

Five hundred was originally written Iↀ, instead of D, and a *thousand* C Iↀ, which was changed into M. The number Iↀ is increased in value *ten times* for every ↀ annexed. Thus, Iↀ = 500; Iↀↀ = 5000; Iↀↀↀ = 50,000, &c.

The number C Iↀ is increased in value *ten times* for every C and ↀ prefixed and annexed to it. Thus, C Iↀ = 1,000; C C Iↀↀ = 10,000, &c. The letters Iↀ are not now in use.

Among the Romans each I represented a finger; the whole hand spread out represented *five*. This character was afterwards written V. The letter X is merely two fives written one above the other; thus, (V/Λ)

C, the initial of *Centum*, the Latin for one hundred, was often written [: this character, cut in two, will leave L, fifty, for its lower half.

M, the initial of Mille, the Latin for one thousand, was originally written C Iↀ. The right hand portion of this character is Iↀ, which represents five hundred, and is now expressed by D."

Without recollection of this notation the dates on some Italian monuments are illegible.——"Reports of the Inspectors of Factories." The reports of Mr. R. Baker and Mr. A. Redgrave for the half-year ending 31st October, 1862, to the Home Secretary, have been issued in the shape of a small blue-book. It contains some interesting information as to the factory people of Lancashire and the relief fund distribution. In reference to the employment of women in the factories, Mr. Baker says:—

"We complain of the low state of morality amongst the working classes, without remembering to what late hours the sexes are congregated, and to what influences they are exposed in going to and returning from work; and that they are almost without moral supervision, and we will not see that female labour in factories, even though it may be necessary, is at variance with domestic teaching, and that for the sake of the wages which it brings everything that is good and holy in the female character is too often sacrificed. Happy, indeed, will it be for the manufacturing districts of England when every married woman having a family is prohibited working in any textile works at all; for it is contrary to the course of all nature that mothers should have to deposit their nurslings with some friend or neighbour, or perhaps in some institution established for that purpose, whilst they go out to work for the family living. We should then have less infantile convulsions, less of disease from Daffey's Elixir and Godfrey's Cordial, and perhaps fewer deaths to record. And happy will it also be when no females shall labour in any such works after six o'clock at night, and when every child in them shall be educated as a matter of course in conjunction with employment; when our young men may have leisure to betake themselves to night schools, and our young women to female guidance and instruction. We could lay these propositions down as a broad principle to be kept, without violating any shred of class liberty, and without in any way interfering with the spirit of commercial enterprise, and society would be endlessly the better for it. They are the great and sacred principles of the Factory Acts, which, whilst they have conferred the highest benefits on the working classes, have neither diminished production nor lowered wages, but have increased both; and thus they commend themselves not less for their beneficial than for their practical excellence."

Both Mr. Redgrave and Mr. Baker appear to do their work well.

Miscellanea.

DESTRUCTION OF A CHURCH BY FIRE.—The fine old parish church at Westerleigh is now in ruins, from a fire which commenced, after Sunday service, in the roof, and communicated to the interior. The tower and west end are comparatively uninjured. The cause of the fire is supposed to be the overheating of the pips of one of the stoves, or the firing of some soot which had gathered near the roof, and the consequent ignition of some of the timber. We are indebted to the mildness of the winter much rather than to any teaching of experience for the comparative infrequency of such accidents this last season.

* By the way, in the dread procession of skeletons which constitutes the frontispiece to Mr. Huxley's book, it is quite clear that neither the skeleton of the gorilla, nor that of the chimpanzee, is by any means so like that of man as the skeleton of the gibbon which he places at the tail of the procession.—ED. B.

* It is interesting to observe, as we have done since the above was written, that the idea of Retrogression, to which we pointed attention in 1860, has just been started in the Ethnological Society, at its last meeting; when it was suggested, in reference to the two ancient skulls which Mr. Huxley treats of in the work under notice, and also in reference to the vestiges from the drift, that, "so far as such evidence goes, it might be inferred that there was a retrogression to apes from man, rather than a development of that from apes." As this idea of retrogression is likely to react signally on the Darwinian and other theories of development, we hope we shall be excused for quoting from what was said on this subject in the *Builder* on 24th March, 1860 (p. 199), especially as we there showed clearly that the theories both of development and retrogression are of exceedingly ancient origin:—

"Few are aware, we dare say, that the doctrine of Lamarck and the 'Vestiges,' is as old as the time of Plato and the ancient Egyptians: yet the fact is easily proved. Let us first of all just glance at what the 'Vestiges' theory comprises. In the first place, it comprises the idea of a progression from lower to higher animal forms, not ending, probably, upwards, even with man, but ascending to some god-like shape not yet 'developed.' Thus the author speaks of 'preparations for, and causes of, the possible development of higher types of humanity;' the mundane economy being 'very well as a portion of some greater phenomenon, the rest of which has yet to be evolved;' the present system being 'but a part of a whole, a stage in a Great Progress;' and 'the Redress is in reserve.' Again, the 'Vestiges' doctrine comprises retrogression as well as progression: thus the author speaks of certain facts indicating 'an unequivocal retrogression towards the type of the lower animals;' adding that 'we see nature alike willing to go back and to go forward.' Keeping these points in view; and also what is said generally of man—of 'the adult Caucasian, the highest point *yet* attained in the animal scale,'—that 'his organization *passes through* conditions generally resembling a worm, a fish, a reptile, a bird, and the lower mammalia, before it attains its specific maturity;'—let us now turn to the ancient books ascribed to Hermes Trismegistus, which the sages of the Theocratic Egypt, possessed; which Iamblichus respectfully alludes to; and which Plato not only speaks of having seen, but appears to have been indebted to for some of his ideas in relation to the hermaphroditic or twofold nature of man, human and divine. An English translation, of old date, of some of these same books, exists in the National Library; and it is from one of these, on 'Regeneration,' that we quote:—

'They which are of creeping things [worms?] are changed into those of watery things; and those of things living in the water to those of things living upon the land, and airy ones, and are changed into men and human souls, that *lay hold* of immortality, and are changed into daimons [genii, not "devils"]. And so THEY GO ON into the sphere or region of the *fixed gods* .....And *this is the most perfect glory of the soul.* But the soul, entering into the body of man—for from one soul of the universe are all these souls,—if it continue evil [if it do not progress into the region of the fixed gods, and there *abide*], *shall neither taste immortality*, nor be partaker of the Good; but, *being drawn back the same way, it returneth into creeping things.* And this is the condemnation of an evil soul. And the wickedness of a soul is its ignorance.'

Here is much more than a mere disjointed trace of an ancient doctrine of metempsychosis, more vast in its comprehensiveness than any other we have ever yet seen or heard of."

ARCHITECTS' BENEVOLENT SOCIETY. — On Wednesday afternoon this society, established in 1850 for the relief of distressed members of the profession, held its annual meeting; Mr. Sydney Smirke, R.A., in the chair. We will give particulars next week.

SOCIETY FOR THE ENCOURAGEMENT OF THE FINE ARTS.—At the meeting last week, Mr. F. Y. Hurlstone, President of the Society of British Artists, delivered an interesting lecture on satire and satirists. The lecturer gave a luminous account of the genius of satire and the works of the great satirists of all countries, from the earliest times to the present; as Horace, Juvenal, Terence, Swift, Byron, &c.; illustrating his remarks by numerous examples.

THE DRINKING FOUNTAIN MOVEMENT.—Two drinking fountains are to be erected, one at Peckham-rye-common, and the other in High-street, Peckham.—Mr. Joseph Betteley, of Stapeley, near Nantwich, is about to present the inhabitants of Nantwich with a drinking fountain, manufactured at A. McDonald's Polished Granite Works, Aberdeen, to be erected at the front of the Town-hall. The fountain is of polished granite, and was to be opened to the public on the 10th instant, the day of the Prince of Wales's marriage.

A PARK FOR FINSBURY.—At a special meeting of the Metropolitan Board of Works on Wednesday in last week, Mr. Savage described the steps taken by the inhabitants of Finsbury in order to obtain that which they considered a public necessity. The original estimate had been 216,000*l.* for 300 acres: this was thought too much, and was afterwards reduced to 230 acres. Having failed in getting even this, it was proposed to have a park of 130 acres; but on looking at the map he found that buildings had been erected on about twenty or thirty acres which, to save expense, he proposed to leave out, reducing the area to from 86 to 100 acres, which could be had at a cost of under 100,000*l.* He then moved to the effect that the necessary proceedings should be taken by the board towards the formation of a public park in the northern suburbs, and defining the boundaries of the ground to be purchased. After a considerable discussion, on a division there appeared —for the original motion, 10; against, 10; the casting vote being given in favour of the original motion.

LIGHT-HEADED LADIES.—A new feature in the application of gas to domestic purposes is said to be on the point of introduction here, says the *American Gas-Light Journal*. "Fire-flies of gold and brilliants already sparkle upon the graceful white feathers and fresh green leaves that adorn the brows of some of our youthful queens. Clusters of diminutive gas-lights are now to spring from the elaborate tresses of beautiful matrons: the jets will issue from burners measuring a twentieth of an inch per hour, within transparent shades exquisitely cut, not larger than a cherry. The tubing is to be of solid gold, connected with a reservoir [a gasometer, we presume] of the same valuable metal, which is to lie concealed in the meshes of luxuriant hair behind the head! The pressure will be applied to the golden tank, which is supported by an elaborate back comb, the top of which forms a row of little gas-lights. Before entering the ball-room, the husband will 'turn on the gas;' light up his blushing bride; and usher her into her sphere of conquest; revolving, like her prototype, the moon, among the lesser lights around!"

SCULPTURE AND THE ROYAL HORTICULTURAL SOCIETY.—Our readers will recollect that not long previously to his lamented death, the Prince Consort suggested opening this society's garden at South Kensington for the reception and exhibition of works of sculpture, in the belief that, while for the time it would contribute to the decoration of the garden, it would also give a permanent impetus to this branch of art. The council, in following out the course thus indicated, have made arrangements for holding an exhibition of sculpture in the garden during the months of May, June, and July in the present year; and have invited the Sculptors' Institute to take the charge of the exhibition, with full power to decide upon the reception or rejection of the works, and all other details relating to the management. The Sculptors' Institute have accepted the duty, and have appointed the following gentlemen to be a committee for the purpose, viz.:—H. Calder Marshall, R.A., H. Weeks, R.A., T. H. Foley, R.A., W. F. Woodington, and Edward B. Stephens. The Royal Horticultural Society have devoted a sum of 500*l.* for the purchase of one or more approved works of high art which may be shown at the proposed exhibition.

THE BARRY MEMORIAL.—Mr. Foley has completed the life-size model, in clay, of the late Sir Charles Barry, to be placed, when in marble, in the Houses of Parliament. The architect is sitting, dressed in a loose wrapper, and contemplating a drawing-board held in the left hand, nearly upright, and resting on his knee. The right hand, hanging down in repose, holds a pencil. The statue is broadly treated, and those who knew Sir Charles best are said to be well satisfied with the likeness.

INTERESTING DISCOVERIES AT POMPEII.—We lately gave an account of the discovery of a mould, in the solidified ashes, of an ancient citizen of Pompeii, whose "statue," in all its natural proportions, and its native garb, was afterwards got by pouring plaster of Paris into the mould. A discovery of even greater interest has since been made, in the moulds of two women, apparently a mother and daughter, in postures which mournfully record the anguish of their last moments. Here the texture of the dress is more faithfully preserved: the arms were covered with sleeves, reaching to the wrist, and the feet were encased in embroidered shoes. In the neighbourhood of the bodies were found two pairs of earrings, a golden finger-ring, two iron keys, and a hundred pieces of money, probably the household valuables which the unhappy victims were endeavouring to save from destruction. M. Fiorelli has been quite as successful in his casts of these figures as in that of the man previously discovered.

PRINCESS'S THEATRE.—A dramatic version of Miss Braddon's "Aurora Floyd" was produced here on Wednesday evening with considerable success, Miss Sedgwick playing the heroine with delicacy and force. The chief honour, however, in respect of acting, belongs to Mr. G. Belmore, who, as *Stephen Hargreaves*, "Softy," displayed a power which few have given him credit for. It was a remarkable piece of acting, justifying the expectation we expressed not long since. Mr. Herman Vezin, as *John Mellish*, Mr. Seyton, as the dog-stealer *Harrison*, and Mr. Roxby as *Conyers*, the scoundrel author of all the after-sorrow, contributed to the success of the piece. The part of *Talbot Bulstrode* wants an actor of more experience than its present representative. The scenery, without making any great claims for admiration, is good and appropriate, especially the Exterior of Felden House by Moonlight, the interior with its lamps and furniture seen beyond; and that of the North Lodge with the park gates.

COMMITTEE OF FINE ARTS; SOCIETY OF ARTS. The council have appointed committees under several heads. The committee on fine arts met on Tuesday, the 3rd; Sir Thomas Phillips, chairman of the council, in the chair. The chairman having invited the committee to suggest any subjects connected with fine art in which they were of opinion that investigation could be usefully made through the agency of the society, it was resolved to recommend the subjects of frescoes, mosaics and glass-painting, and pigments, as matters to which the attention of the society might be advantageously directed. The committee were further asked to assist in the preparation of the new list of premiums about to be issued by the society, by recommending any subjects bearing upon the fine arts for which premiums might be offered; and it was arranged that a circular for this special object be sent to each member of the committee.

REPORT OF SURVEYOR TO CITY SEWERS COMMISSION.—The usual report (for 1862) of Mr. Haywood, the engineer and surveyor to the City Sewers Commission, has been printed. The total length of new sewers built during the past year was but 888 feet, of which 396 feet were reconstructed upon the line of old sewers. The total number of premises drained was 171, and the approximate number known to be drained at end of 1861 was 13,184, leaving 2,645 about the drainage of which nothing is known. Various improvements have been effected during the year in setting back fronts of premises and otherwise. The gas question occupies some share in the report, but of this we took note in separate reports of Mr. Haywood and Dr. Letheby. No additional drinking fountains have been erected in the City during the year, and indeed there are but five within the jurisdiction of the commission; and some, if not all of these, we may remark, appear to have been stopped running for the winter; why, we cannot understand; for it is not during summer alone that there are "thirsty souls" who might be induced to prefer a pull at the fountain to one in a public-house. We are glad to observe, by the way, that two fountains are being erected in the King's Cross Railway Station.

THE HOUSES IN BRIDGE-STREET, WESTMINSTER.—In answer to Sir J. Shelley, in the Commons, Mr. Cowper states that all the houses on the south side of Bridge-street will be cleared away before the close of next year. All the tenants had been agreed with except two, one of whom was the leaseholder of Fendall's Hotel.

LOCKS. — The Prince of Wales has appointed Messrs. Chubb & Son, of St. Paul's Churchyard, as "Lock Makers and Safe Makers" to his Royal Highness. In connexion with this we are asked to mention, that Messrs. Chubb & Son manufactured the locks for the mausoleum of the late Prince Consort, an engraving of which appeared in our pages recently.

RAILWAYS IN SWEDEN.—The official Swedish Telegraph Report informs us, that the Swedish telegraph net has advanced from 10 geographical miles in 1853 to 689 in 1861; the total amount of wires being 983 geographical miles, while the number of stations has increased from two to sixty-eight. In 1861 the number of telegrams was 169,038, the income 513,044, and the clear gain to the State 69,142 Swedish dollars.

A NEW USE FOR SAWDUST. — We have heard of bread being made of saw-dust; but to dye it into a similitude of manure beats wooden nutmegs hollow. In a recent case at the Clerkenwell police-office, in which two women had poisoned themselves with copperas in the house of a sweep; one of the witnesses said the copperas was used by the man Clark "in his business" as a sweep. A police constable explained that Clark told him he used it for dyeing sawdust to sell to the farmers as soot!

MIDDLE-ROW, HOLBORN.—A deputation from the Holborn District Board of Works, accompanied by their surveyor and clerks, recently waited upon the Hon. W. Cowper, chief commissioner of public works and buildings, at the office, Whitehall-place, to represent to him the desirability of making the cost of the removal of Middle-row a charge upon the coal and wine duties, for the continuance of which a Bill is now being prosecuted in Parliament. Sir S. Morton Peto, bart., M.P., introduced the deputation. Mr. Cowper said the present Bill simply proposed to continue the duties for a specified period, and that it would be for a subsequent Bill to determine the precise localities in which the revenue should be expended. He quite concurred with the deputation in thinking that the bridging over the Holborn valley would be incomplete without the removal of Middle-row, especially when the traffic from the new station to be erected by the London, Chatham, and Dover, and Metropolitan, Railway Companies was taken into account. He should have much pleasure in assisting the deputation to the attainment of their views at the proper time.

GAS.—It having been deemed necessary to add a third gasholder to the two already existing at the Kettering Gas Works, tenders were sought per advertisement for the erection of the same, the following being sent in by contractors:—J. & W. Horton, 530*l.*; W. Mabon & Co., 516*l.*; Stride & Aitken, 505*l.*; S. Cutler & Co., 500*l.*; R. Whitehouse, 498*l.*; Geo. Cutler & Co., 480*l.*; J. Cliffe, 478*l.*; J. H. Little, 460*l.*; J. Wooler, 444*l.*; C. & W. Walker, Salop (accepted), 444*l.* Tank and Works:—Butlin & Barlow, 239*l.*; J. Margetts, 208*l.* 10*s.*; Wm. Henson, Kettering (accepted), 199*l.*; J. Birkett, 189*l.*——The price of gas is to be reduced at Abergavenny from 6*s.* 10*d.* to 5*s.* 10*d.* per 1,000 feet; the 10*d.* also to be deducted as discount for prompt payment.——The Howden Gas Company have reduced their price from 7*s.* 6*d.* to 6*s.* 8*d.*, and declared a dividend of 6 per cent., free of income-tax.——The Bromley Gas Company have declared a dividend of 10 per cent., leaving a balance of 305*l.*,—150*l.* for the formation of a new reserve fund, and the remainder to the credit of the profit and loss for the current year. They have also largely extended their mains, and increased their consumption.

TENDERS.

For road-making, Yensing Station, Eversfield Estate, St. Leonard's. Mr. F. H. Fowler, architect:—

Sawyer	£694 0 0
Kenwood	585 0 0
Burchell	551 0 0
Hughes	545 0 0
Wright	494 0 0
Word	475 0 0
Howell (accepted)	474 0 0

For rebuilding part of Nos. 23 and 24, Philpot-lane, for Mr. Hinckcliff. Messrs. Tress & Chambers, architects:—

Brass	£997 0 0
Axford	900 0 0
Hardman & Sandon	890 0 0
Macey	878 0 0
Ashby	620 0 0

For house and stabling, at Winchmore-hill. Mr. T. C. Clarke, architect. Quantities supplied:—

Ladds	£1,847 0 0
Mansfeld & Sons	1,800 0 0
Ashby & Sons	1,763 0 0
Lawrence & Sons	1,742 0 0
Browne & Robinson	1,735 0 0
Patman & Fotheringham	1,698 0 0
Cushing	1,695 0 0
Sharpington & Cole	1,613 0 0

For a house to be built at Gainsborough. Messrs. Bellamy & Hardy, architects:—

Wilson	£2,984 0 0
Huddleston	2,903 15 0
Taylor (accepted)	2,873 1 0

For the erection of a pair of houses, at Hornsey-rise, for Mr. Joseph Spawforth. Mr. Edward Low, architect. Quantities not supplied:—

Newman & Mann	£1,686 0 0
Langtree	1,678 0 0
Sale	1,525 0 0
Sleap	1,519 0 0
James & Ashton (accepted)	1,517 10 0

For building National Schools, Abergwill, Carmarthen. Mr. Withers, architect.

David	£1,631 0 0
Howell, Morgan, & Williams	1,433 0 0
Williams, Richards, & Williams	1,351 6 0
Davies & Son	1,295 10 0

For finishing a villa in Wimbledon Park, for Mr. E. O. Coe. Mr. Charles Lee, architect. Quantities supplied:—

Adamson & Sons	£843 0 0
Aviss & Son	800 0 0
Aries (accepted)	799 0 0

TO CORRESPONDENTS.

Protestant Church, Montpellier.—Some competitors are inquiring the result of the competition.

C. B. K.—E. B. (it appears to be postponed *sine die*).—G. B. (We have before now stated it).—G. B. B.—E. D. & Co.—J. R. N.—A Builder (apply to a qualified land surveyor).—A Constant Subscriber.—R. L. (exempt).—G. W.—Subscriber from Commencement.—J. D. S. (Trebnavl).—F. R. N. H.—J. B.—Mr. B.—W. F. P.—E. L.—E. R.—A. T. (next week).

We are compelled to decline pointing out books, and giving addresses.

All statements of facts, lists of tenders, &c., must be accompanied by the name and address of the sender; not necessarily for publication.

NOTE.—*The responsibility of signed articles, and papers read at public meetings, rests, of course, with the authors.*

Advertisements cannot be received for the current week's issue later than FIVE o'clock, p.m., *on Thursday.*

☞ *NOTICE.—All Communications respecting Advertisements, Subscriptions, &c., should be addressed to "The Publisher of the Builder," No.* 1, *York-street, Covent Garden. All other Communications should be addressed to the "Editor," and* NOT *to the "Publisher."*

THE *Times*, May 7th, speaking of Benson's Watches in the Exhibition, says:—"Undoubtedly, however, the finest show in this respect is made by Benson, who offered prizes for designs for watch-cases at the South Kensington Museum, and who by this means has secured some of the most exquisite ornamental details for watch-cases that are shown in the building." Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, from the plainest to the highest quality of which the art is at present capable, and adapted to all climates. Benson's Illustrated Pamphlet on Watches (free by post for two stamps), contains a short history of watchmaking, with descriptions and prices. It acts as a guide in the purchase of a watch, and enables those who live in Scotland, Ireland, Wales, the colonies, India, or any part of the world, to select a watch, and have it sent free and safe by post. J. W. Benson, Prize Medallist, 33 and 34, Ludgate-hill, London.—Established 1749.—[Advt.]

ADVERTISEMENTS.

MR. WILLIAM ELLISON,
ARCHITECT and CONSULTING SURVEYOR,
OFFICES:—
19, FENCHURCH-BUILDINGS, FENCHURCH STREET, E.C.

MR. G. NEWENHAM (Pupil of G. G. Scott, Esq. R.A.) PREPARES Sets of Competition Designs, working an every description of Architectural and Artistic Drawings. Perspectives Outlined in a superior manner (and coloured by the best artists), with punctuality and despatch, and on reasonable terms.—Offices, 26, Parliament-street, Westminster, S.W.

MR. J. H. LEONARD,
ARCHITECTURAL DRAUGHTSMAN,
ARTISTIC COLOURIST and LITHOGRAPHER,
No. 21, MONTAGUE-STREET, RUSSELL-SQUARE, W.C.
Competition and every description of Architectural, Working, and Detail Drawings prepared.

ARCHITECTURAL PARTNERSHIP.—A Gentleman of experience is desirous of a SHARE in a first-class ARCHITECTURAL and SURVEYING PRACTICE. Address, A. K. office of "The Builder."

PARTNERSHIP.—To ARCHITECTS.—An excellent opportunity is offered to a Young Architect, to take the Management of, and a Share in, a well-established PRACTICE in the country, the Principal being too much engaged in London, on railway and other engineering works, to devote a sufficient time to the Architectural part of his profession.—Address, J. H. ADAMS, 9, Parliament-street, Westminster.

TO AUCTIONEERS' CLERKS.

A CLERK WANTED, in an Auctioneer's Office, of general practice. One accustomed to the collecting of Rents and management of House Property, drawing Specifications of Dilapidations, &c. would be prefer ed.—Applicants are requested to send full particulars of qualifications, by whom last employed, and salary required, to A. Z. Auction Mart, E.C.

AN ARCHITECT and SURVEYOR requires a good DRAUGHTSMAN, who must also thoroughly understand measuring and taking off quantities.—Address, stating terms, qualifications, and references, to W. H. Post-office, Northampton.

TO CABINET-MAKERS.

WANTED, a First-rate WORKMAN accustomed to Gothic work.—Apply by letter, with references, &c. to Messrs. SKIDMORE & CO. Alma-street, Coventry.

WANTED, immediately, a Good GOTHIC DRAUGHTSMAN.—Address, J. MEDLAND TAYLOR, 2, St. Anne's Churchyard, Manchester.

TO FOREMEN OF JOINERS.

WANTED, immediately, in a permanent situation, an active and thoroughly experienced SHOP FOREMAN of JOINERS.—Apply, giving names for reference, wages required, and other particulars, to F. M. Post-office, Darlington.

WANTED, in an Architect's Office, an ASSISTANT. Must be a neat draughtsman (especially Gothic), and competent to perform the usual business of an office.—Address, stating salary, reference, &c. to J. C. L. care of Mr. B. Wheeler, Exchange Arcade, Manchester.

WANTED immediately, for a short period, a first-rate ARCHITECT'S ASSISTANT, competent to prepare outline, geometrical elevations and perspective views in Italian, with neatness and taste. Persons of second-rate ability are requested not to apply.—Address, L. L. L. Office of "The Builder."

WANTED, a PLUMBER and GASFITTER, one who has no objection to fill up his time with painting, &c.—Apply to H. NASH, 13, Lansdowne place, South Lambeth, S.

WANTED, a competent WORKING FOREMAN of BRICKLAYERS, to carry out some works. None need apply but men of active and industrious habits.—Apply to LEWIS SHRUBSOLE, Builder, Faversham.

WANTED, a SITUATION, as Assistant to a Surveyor or Engineer. Well acquainted with the usual routine of an office and sewerage works.—Address, H. K. C. Office of "The Builder."

TO BUILDERS, DECORATORS, &c.

WANTED, a SITUATION as FOREMAN of PAINTERS, or to Take Work by Contract, for Labour only.—Address, B. C. Builders' Arms, Charles-street, South Kensington.

WANTED, by a thoroughly practical Man, a SITUATION as BUILDER'S FOREMAN or CLERK of WORKS, in Town or country.—Address, RICHARD, Office of "The Builder."

TO GASFITTERS, PLUMBERS, BUILDERS, AND OTHERS.

WANTED, by a Young Man, a SITUATION as a thoroughly practical GASFITTER. Is a good painter and glazier. Good reference. Town or country.—Address, W. H. 29, West street, Green-street, near Victoria Park.

TO BUILDERS.

WANTED, a RE-ENGAGEMENT, by an experienced GENERAL FOREMAN, who has carried out several large jobs. Good references given.—Address, J. W. D. 13, Caversham-street, Chelsea, S.W.

TO BUILDERS, CONTRACTORS, &c.

WANTED, by a thoroughly practical JOINER, a RE-ENGAGEMENT to work a Moulding or Saw-bench, in a Joiner's shop. Five years in last situation where undeniable references can be given.—Address, B. H. Office of "The Builder."

WANTED, a SITUATION as ENGINE-DRIVER and STOKER, or to Work a Bench. Can sharpen saws. Has been in present situation eleven years. Can have first-class testimonials.—Address, T. K. No. 4, St. Stephen-square, Dover-road, Borough.

TO BUILDERS.

WANTED, a SITUATION, by a thoroughly competent Builder's Clerk. Country preferred. Good references, &c.—Address, A. O. B 4, Hampstead-road, London, N.W.

WANTED, by a Carpenter, possessing a good and increasing trade, in a populous village in Surrey, an active WORKING PARTNER, with 120*l.* at his command. The best references to Gentry in the neighbourhood can be given as to the *bond fide* nature of this advertisement.—Address, A. B. Post-office, Leatherhead, Surrey.

TO BUILDERS AND CONTRACTORS.

WANTED, a SITUATION as GENERAL FOREMAN. Has had a good experience in all branches (carpenter by trade).—Address, A. Z. 2, Hamilton-terrace, New Cross-road.

TO PAINTERS, GLAZIERS, AND HOUSE AGENTS.

WANTED, by a Young Man, who thoroughly understands the above business, EMPLOYMENT, or an ENGAGEMENT. Terms, 1*l.* 4*s.* per week. Character, if required.—Address, T. L. City of Salisbury, Walworth, London.

TO BUILDERS AND CONTRACTORS.

WANTED, by an experienced CLERK, a RE ENGAGEMENT. Well up in measuring quantities and estimating. Age 27. Wages moderate.—Address, R. A. O. 2, Fisher's-lane, Turnham-green, W.

WANTED, by an experienced Man, a SITUATION as WORKING FOREMAN. Has had good experience in stairs, shop fronts, sashes and frames, building alterations, and general repairs. Can make out working drawings, estimate, and measure.—Address, R. A. Post-office, Brixton-rise, Surrey.

TO BUILDERS, LANDLORDS, AND OTHERS.

WANTED, by a Handy Man, by trade a CARPENTER, a SITUATION where he can make himself generally useful in Repairing, Painting, Paperhanging, &c.; or could take the entire charge of any public or private building. Thirty years' experience.—Address, A. O. Mr. White's, No. 1, Fitzroy-street, Fitzroy-square.

TO BUILDERS.

WANTED, a SITUATION as GENERAL FOREMAN, by a thoroughly competent person, aged 30; or the advertiser would not object to prepare plans, estimate, and assist one or more builders generally, he being similarly engaged for a part of his time, which would be given up for a permanent situation, or would increase the other, as stated.—Address, G. Post-office, Finsbury-place, E.C.

TO SURVEYORS, AUCTIONEERS, AND ESTATE AGENTS.

WANTED, by the Advertiser, a SITUATION as IMPROVER in either of the above Offices. Three years' experience. Unexceptionable references can be given.—Address, J. F. 6, Commerce-place, Brixton-road, S.

TO BUILDERS, &c.

WANTED, a RE-ENGAGEMENT, in town or country, by a Young Man who has had experience in a London Builder's Office. Can have first-class reference.—Address, L. N. Office of "The Builder."

TO PLUMBERS AND BUILDERS.

WANTED, by an experienced PLUMBER and GAS FITTER, a SITUATION. Good references, if required.—Address, J. N. No. 3, Bell-yard, Temple-bar.

TO BUILDERS AND OTHERS.

WANTED, by a Young Man, a SITUATION as an ENGINE-DRIVER, Frame or Bench Worker. Is a good saw-sharpener, thoroughly understands cutting out for joiners' shop, and can fill up his time by doing all repairs. Town or country. Address, J. B. 36, Cumberland-street, Marlborough-road, Brompton, S.W.

TO BUILDERS, &c.

WANTED, a SITUATION, by a Practical Man, as PLUMBER and GASFITTER. Has been sixteen years in trade. Reference if required. No objection to the country.—Address, PLUMBER, 18, Grosvenor-market, Davies-street, Oxford-street.

TO ARCHITECTS, ENGINEERS, AND CONTRACTORS.

WANTED, a RE-ENGAGEMENT, by a thoroughly practical and efficient Clerk of Works, with the most respectable references to the present and former employers. Address, R. S. T. Mr. Gumuleton, 12, Old Dorset place, Clapham-road, S.

TO ARCHITECTS, GENTLEMEN, &c.

WANTED, by the Advertiser, a RE-ENGAGEMENT as CLERK of WORKS, or as Manager on a Gentleman's Estate, to superintend the erection and repairs of buildings, &c. Unquestionable references and testimonials.—Address, D. K. Post-office, Horsell, Surrey.

TO BUILDERS AND OTHERS.

WANTED, a SITUATION as GASFITTER, PLUMBER, and GLAZIER; can turn his hand to painting and paperhanging.—Address, B. M. 17, Johnson's-place, Pimlico.

TO BUILDERS AND STONEMASONS.

WANTED, by a Young Man, a SITUATION as IMPROVER, for one or two years, to the Stonemasoning. London preferred.—Address, C. A. 6, Norwich-court, Fetter-lane, Holborn.

WANTED, by a Young Man, for a constancy, a SITUATION as GRAINER, PAINTER, &c.—Address, A. B. 19, St. James's Crescent, Bermondsey.

WANTED, by a Practical WORKING FOREMAN, a SITUATION. Is a good staircase hand, shop fronts and general buildings, and making out working drawings. No objection to take work by contract.—Address, D. B. 24, Thomas-street, Oakley-street, Lambeth.

WANTED, a SITUATION, by a careful and Practical PAPERHANGER; or to take charge of work. Can be recommended from a first-class house, where he has been for a period of over ten years.—Address, W. G. care of Mr. Moss, Cross street, Newington Causeway.

TO BUILDERS AND PLUMBERS.

WANTED, by a respectable Young Man, a SITUATION as good PLUMBER. Has no objection to fill up his time with painting, if required. A good reference can be given.—Address, post-paid, to T. T. 4, Abbey-street, Bermondsey-square, Southwark.

WANTED, a RE-ENGAGEMENT, by the ASSISTANT SURVEYOR of the City of Coventry, who has held the above office for the past ten years. Unexceptionable references.—Address, W. B. City Surveyor's Office, St. Mary's Hall, Coventry.

TO FOREMEN TIMEKEEPERS AND OTHERS.

WANTED, by the Vestry of the Parish of Clerkenwell, a person to act as FOREMAN, to look after the Scavengers and Water-carts, under the direction of the Surveyor; wages 1*l.* 5*s.* per week. These goods are made of the best materials and workmanship, and have obtained a high reputation among the chief decorators in the kingdom. Varnish and Colour Manufacturers, Oilmen, Merchants, &c. are supplied on the lowest terms. Price Lists forwarded on application.

NOTICE.—BUILDERS and DECORATORS will find superior and unparalleled advantages in MEAD'S PATENT STAINS, comprising the rich oak, satin wood, wainscot, Spanish mahogany, &c.: they far surpass anything ever seen, and cost very much under paint for the interior wood-work of dwelling houses, being admirably adapted for the castle, the magnificent hall, the library, the drawing room, and the miniature cottage; also for church work, merchants' and bankers' offices, counting-houses, schools, &c. &c.—To be had of T. J. HOGG, 3, Brunswick-place, City-road, E.C.; &c.—To be had of T. J. HOGG, 3, Brunswick-place, City-road, E.C.; and at the Works, Abridge, Essex. Price 8s. per gallon. Post orders will have best attention. The above merits special notice. The chaste and beautiful effect given to work finished with them, and great saving in time and expense, are highly appreciated by the most experienced workmen.

PATENT GRAINING APPARATUS.—TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.
One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They are very cheap, and will repay the cost of them in two days' working. They only require a trial, and any person studying his own interest would not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 35, High street, Marylebone, London, W.
N.B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post-office order for 22s.

T. KENT'S PAINTING-BRUSH MANUFACTORY
Is continued by his Successors,
CROWDEN & GARROD,
Falcon-square, London, E.C.

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

The only Medal "for Stone Ware" has been awarded to

DOULTON & WATTS, LAMBETH POTTERY,

LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

WIMBLEDON, Surrey.—Eligible FREEHOLD BUILDING LAND.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, opposite the Bank of England, on TUESDAY, MARCH 17, 1863, at TWELVE for ONE o'clock, in fifty-one lots, the valuable FREEHOLD BUILDING LAND, free from tithe and land tax, with frontages to the high road to Merton and the new road called Hartfield road, contiguous to the Wimbledon Station on the main line of the London and South-Western Railway. The corner directly opposite the station is most eligible for a tavern. Nine tenths of the purchase money may remain on mortgage or contract at 5 per cent to be paid in nine years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale may be obtained about ten days before the sale of Messrs. RUSSELL & DAVIES, No. 59, Coleman street, E.C.; of the Auctioneer, No. 14, Moorgate street, London, E.C.; and at the Place of Sale.

TO BUILDERS, STONEMASONS, AND OTHERS.—Re H. W. WILLIAMSON, a Bankrupt.

MR. BOYES is instructed by the Assignees to SELL by AUCTION, on the PREMISES, Upper and Lower Tooting, Surrey, on THURSDAY, the 26th instant, at TWELVE precisely, the GOODWILL of the old-established BUSINESS; also, the Stock and Plant and Materials of a Builder, useful grey horse, two spring, five tumbril, and other carts, in good condition, timber carriage, nearly new, and a variety of trade business effects. Particulars and catalogues may be had on the Premises; of Messrs. HARRISON & LEWIS, Solicitors, 24, Old Jewry; and at the Auctioneer's Offices, 32, Aberdeen-lane, Lombard street.

TO BUILDERS, DECORATORS, EXECUTORS, UNDERTAKERS, &c.

MR. EDWIN WHITE will SELL by AUCTION, at 12, Holborn-bars and 1, Castle-street, Holborn-hill, on TUESDAY next, the following goods:—8 sets pieces of French and English PAPER HANGINGS in very handy lengths for bed or gilt room use, 20 excellent waterclosets, 2½ gallons of deal, carriage, and oak varnish, 50 gallons of turpentine, 2 cwt of white lead, 1 cwt stationary, ropes, royal, Brocatelle, Rouge Royal, Sienna, Belgian grey, and other marble chimneypieces, a few stone chimneypieces, and a rich sculptured statuary marble monumental tablets.—View and catalogues Monday and morning of sale

FROGMORE, WANDSWORTH.—TO BUILDERS AND OTHERS.

MR. NEWBURY BALL is instructed TO SELL by AUCTION, on the PREMISES, as above, on THURSDAY, MARCH 19th, at TWELVE o'clock, a long Range of WAREHOUSES and WORKSHOPS, in convenient lots, comprising nearly a thousand good stock bricks, pantiles, and slates, sound fir joists, rafters, and flooring, fir beams and supports, several hundred feet of York stones, slate and other paving, and other effects. On view. Catalogues had at the Auctioneer's Offices, High-street, Wandsworth, S.W.

n THURSDAY NEXT, at GARRAWAYS—CITY of LONDON—Freehold Building Site, comprising the large Area of about a Quarter of an Acre

MESSRS. WILSON & SCOBLE will SELL by AUCTION, at GARRAWAY'S, on THURSDAY Next, MARCH 19, at ONE o'clock precisely, a highly valuable and important FREEHOLD PROPERTY: comprising the extensive premises upon which the works of Messrs Swinborne, Paste-glass Manufacturers, have been carried on for many years; known as "Red Bull Wharf," Upper Thames-street, in the best position between Southwarke and London Bridges, and opposite the range of warehouses of Messrs. Humphrey on the Surrey side; having a clear frontage to the river of 65 feet, by the great depth of about 180 feet. The property is bounded on the west by the premises of the City of London Brewery Company, and on the east by a wide-paved passage and the open iron wharf of Messrs Thorney-croft, and has an excellent carriage-way to Upper Thames-street. The site is in every way most eligible for the erection of very high first-class business warehouses, with extensive vaults, now so much in demand in the neighbourhood, from the demolition of the very many warehouse properties taken for railway and other public requirements. The buildings at present comprise a four-tier warehouse, one story wood, and brick erections, and an excellent dwelling house of modern construction, the whole of good, sound materials. Plans for can be had at Mr Summer-day next—May be viewed, and particulars, with plans, had of J. H. STANTON, Esq Solicitor, Newcastle-upon-Tyne; of Messrs HAYES, TWISDEN, PARKER, & CO. Solicitors, 80, Russell-square; at Garraway's; and of Messrs. WILSON & SCOBLE, Auctioneers and Estate Agents, 114, Leadenhall-street, E.C.

By order of Trustees.—To first-class Builders and Ironmongers

MESSRS. CUTTEN & DAVIS will SELL by AUCTION, on the PREMISES, No. 18, Wilson street, Finsbury, on WEDNESDAY, MARCH 18, at HALF-PAST for TWELVE o'clock precisely, the whole of the very superior STOCK of STOVE-RANGES, and FENDERS, including forty-five polished steel and black stoves, with ormolu mounts (of the most expensive character), twenty Elizabethan Gothic sarcophagus and half register stoves, thirty bed room, hall, and shop stoves; six best ranges, a large Gothic church stove, 5 feet high; fifty polished steel and bronzed fenders and sets of fire-irons, stove castings, tools, and other effects.—May be viewed three days prior, and catalogues had of the Auctioneers, No. 9 and 10, Basinghall-street, E.C.

GEORGE MITCHELL'S MARBLE and STONE WORKS, WALTON STREET, BROMPTON, S.W.

Notice of PRIVATE SALE of 6,000 MARBLE CHIMNEY-PIECES, to be sold at very reduced prices (to save the expense of removal to the Brompton road), in the following Marbles, viz.:—Statuary, Rouge Royal, Black and Gold, Black Serpentine, Dardilla, Dove, California, St. Ann's, Rouge Jasper, Jeune Fleure, Brocatella, Genoa Green, Irish Green, Blue Belge, Emperor's Red, Irish Fossil, Campania Melange, Vein, Sicilian, and various excellent specimens of British Marbles, varying in price from 3l. 10s. to 50l.; and for regularity of design, workmanship, and quality, not to be surpassed in England. Purchaser to the extent of 3 0l. and 50l. approval bills of three and four months will be taken, less 2½ per cent. net. Purchasers from the country will be supplied with packing cases, and the same packed and delivered to any of the metropolitan stations for 1 per cent. on the amount purchased.

145, Old Kent road, near Bricklayers' Arms Station.—Remaining STOCK of BRICKDUST to be sold on the Premises

MR. JOHN R. FOWLER will SELL by AUCTION, on WEDNESDAY, MARCH 18th, at TWELVE for ONE the remaining STOCK: comprising planks, deals, battens, quartering, cut stuff, flooring, pantiles, slating battens, feather edge and match boards, and useful materials, to clear the premises.—Auction Offices, 24, St. Switchin's-lane, E.C.

BY ORDER of the EXECUTOR.—To BUILDERS, TIMBER DEALERS, FIREWOOD CUTTERS, CONTRACTORS, and OTHERS. Second Portion of the STOCK of the late Mr. W. Thomlinson, Timber Merchant, Wednesbury.

FHALL & SON will SELL by AUCTION, on MONDAY, MARCH 16, 1863, at TWELVE, on the PREMISES, adjoining the Baptist Chapel, Romney street, Westminster, the SECOND PORTION as above, consisting of 10,000 feet of cut oak and fir scantling and quartering, long girders and bressummers, fir sleepers, iron piles, wheeling planks and boards, 10,000 feet of flooring and other boards, partitions, framing, rooms, sash, and other doors, gates, sashes, frames, shop-fronts, skylights, 20 stacks of firewood, work benches, small quantity of useful brickgoing, and other useful effects.—May be viewed; and catalogues had on the Premises; at the "Telegraph," Regent-street; and of the Auctioneers, Chester-street, Kennington, and 1, Hamilton-terrace, Wandsworth-road

N.B. The very desirable PREMISES TO BE LET on Lease.

Apply to the Auctioneers.

NORTH LONDON RAILWAY.—Clearance Sale for City Termini

MESSRS. KENNEDY & BONNY are instructed by the Directors of the North London Railway Company to SELL by AUCTION, on the PREMISES, early in APRIL, the very excellent MATERIALS of about EIGHTY HOUSES, in Broad street Buildings, Liverpool street, Half-Moon-street, Foster street, Peter-street, and Sun-street.—For further particulars see future advertisements.—Auctioneers' Office, Camden Town.

Valuable Freehold Building Land, immediately in the rear of the Bank of London, Cashion court, and Old Broad-street, in the City of London

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer FOR SALE, at the MART, on FRIDAY, MARCH 27th, at TWELVE, a very important and valuable FREEHOLD PROPERTY, situate in the rear of the Bank of London, in the parish of St. Peter-le-Poer, forming the vacant site behind No. 1, Cashion court Old Broad street, near to the Stock and Royal Exchange, in the heart of the city of London. It comprises between 9 and 10 hundred superficial yards, and is most eligibly adapted for the construction of offices, or exceedingly valuable in connexion with the adjoining premises. The importance and value of the situation may be seen by the splendid buildings, the Ocean Marine, the National Bank, and the Imperial Insurance office, which have been recently erected in Old Broad street, and the difficulty of acquiring land at any price in the immediate neighbourhood.—May be viewed, and particulars had of Messrs. DESBOROUGH, YOUNG, & DESBOROUGH, 5, Size-lane, Bucklersbury; Messrs. UPTON'S, JOHNSON, & UPTON, Austinfriars; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad-street, Royal Exchange.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Good gravel, situation healthy, and water excellent. The Snaresbrook Station is 400 yards only from the Estate, and the City is reached in twenty-five minutes. The Lessee will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston; some very eligible SITES in the Grove road, Mile-end; a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for terms of years. For particulars apply by post, per paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

EXTENSIVE MANUFACTURING PREMISES, SOUTHWARK.—TO BE LET on LEASE, extensive MANUFACTURING PREMISES, occupying a very large area situate in the Borough-road, Southwark. The buildings, which are very substantially erected, comprise a very large factory, of three lofty floors, with basements, a smaller factory of four floors adjoining, a very spacious and lofty ground-floor factory, yard, a capital family residence and offices, two gateway entrances, and three dwelling-houses, fronting the Borough road, Nos. 77, 78, and 79, which can be readily let off if desired.—For further particulars apply on the Premises; or to Messrs. FULLER & HORSEY, Billiter-street, Fenchurch-street, E.C.

TO CAPITALISTS, BUILDERS, and OTHERS.—Persons willing to ERECT two small detached VILLAS on Leckhampton Hill, adjoining the Birdcage road, may obtain Plots of Land for that purpose, in the best part of this picturesque locality, commanding extensive views of the Vale of Gloucester and surrounding country, on Building Leases at a very low ground rent, with power to purchase the freehold. A lease for ten years, to pay 7½ per cent per annum, will be guaranteed for one house.—Full particulars and every information will be given on application to Mr GEO. W. SADLER, Architect and Surveyor, 407, High street, Cheltenham.

FREEHOLD GROUND between the Forest Hill and Sydenham Stations TO BE LET on long Building Leases.—For plan and particulars, apply to C. F. REEKS, Esq. Architect, 12, Middle Scotland-yard, S.W.

PHILBROKE ESTATE, at Leytonstone, on the Woodford and Loughton Railway, twenty minutes from Fenchurch and Bishopsgate Stations.—This valuable FREEHOLD ESTATE (land-tax redeemed), surrounding the Station, healthy locality, gravelly soil, excellent drainage, water and gas laid down, roads made, sand can be dug on the estate, it is proposed TO LET in Plots suitable for building detached and semi-detached villas. Repeated applications have been made for houses in this neighbourhood. For terms, apply to Mr. ATHEY, at the Surveyor's Office, Philbroke Estate, Leytonstone, Essex.

TO BUILDERS, &c.—A PLOT of FREEHOLD BUILDING LAND for SALE, near the New Church, Cottenham Park, Wimbledon; also a PLOT fronting the Merton-road, Wandsworth. Two Semi-detached Villas now here each. For plans, &c. apply to Mr. W. C. POOLE, 11, Great Smith street, Westminster, S.W.

EXTENSIVE MANUFACTURING PREMISES, Whitechapel.—TO BE LET or SOLD, together or separately, the extensive and important range of PREMISES, recently occupied as the Whitechapel Distillery, with land adjoining if required. The building, many of which are of great extent, are most substantial and recently, principally in 1845, and are very conveniently arranged for any manufacturing purpose. There are large distinct gateway entrances, and the buildings on all sides are surrounded with paved yards. The total area is about three acres, exclusive of six acres of accommodation land, which may be had if required. There is an Artesian well which affords a constant and unlimited supply of pure water.—Further particulars, and cards to view, may be had of Messrs. PENNANT & DARLEY, Solicitors, Raymond's buildings, Gray's-inn; and of Messrs. FULLER & HORSEY, Billiter-street, E.C. where plans of the property may be seen.

WALTON-ON-THAMES.—TO BE SOLD or LET, on lease, a handsomely-finished VILLA RESIDENCE standing in an acre and a half of land, within half a mile of the Walton Station. Apply to W. SMITH, 61, Tabernacle walk, Finsbury, E.C.

FREEHOLD GROUND TO BE LET, for a term ninety-nine years.—A most desirable frontage of about 160 feet, for good shops, in a first-class situation, near to the Lark Hall Tavern, Clapham, at a low ground rent. Apply to Mr J. THOMAS, Architect and Surveyor, 10, Dennark street, Camb well.

SAINT HELEN'S, LANCASHIRE.—TO BE LET, on Lease, the extensive MANUFACTURING PREMISES known as the Ravenhead Copper Smelting Works, situate at St. Helen's, with a wharf on the canal, and a branch of the St. Helen's Railway to the works. The buildings are of the most substantial character, and cover about 20 acres, of which about 5 acres are occupied by the works, the remainder being arable and pasture land. The buildings comprise a range of very substantial brick and slated buildings, 3 tall chimney shafts, arranged for the purposes of copper and silver smelting and refining, with all the necessary machinery, and every convenient establishment to, as they possess the advantages of direct communication by rail or water carriage with all parts of the kingdom. Coals can be had at a reduced rate from the neighbourhood almost the usual price, and labour is cheap and abundant.—For particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.; and Messrs. HARRISON & FINCH, 2, Gray's-inn, London.

TO CONTRACTORS, BUILDERS, and BRICKMAKER.—Near to Morden, Old Malden, Worcester Park, and Sutton Railway Stations. TO BE LET, about EIGHTY ACRES of very fine BRICK-EARTH LAND, which may be worked (without brickmaking plant) at a moderate royalty. Specimens of various articles manufactured from the clay may be inspected, and further information obtained, at the Offices of Messrs. WIGG, SON, & OLIVER, 7, Bedford row, W.C.

TO CEMENT MANUFACTURERS.—TO BE LET, the extensive PREMISES known as the Ebley Cement Works, in the Isle of Ebley, near SITTINGBOURNE, Kent. They consist of Sixteen Acres of Ground, with Six Kilns, and all the necessary buildings and appliances for the Manufacture of the finest Roman or Portland Cement, on a large scale; also Eighteen substantial LABOURERS' COTTAGES. There is excellent dock accommodation, and water carriage to London direct. The mail for manufacturing the cement is contained on the premises, and with a small outlay the works may be rendered very productive.—For terms and particulars apply to Mr. J. H. EVANS, Solicitor, 59, Lincoln's-Inn-Fields, W.C.

TO BE LET, on Lease, THREE OLD HOUSES, with large Back Yards, being Nos. 196, 197, and 198, Kent street, Borough.—For particulars apply to Mr. ROBERT PARRIS, No. 5, Wolsingham-place, Lambeth.

FREEHOLD SITES for BUILDING, and FREEHOLD HOUSES, can be obtained in the best part of Prince Albert's-road, near Kensington Gore, in front of the Royal Horticultural Gardens. Apply to C. J. RICHARDSON, Architect, 47, Prince Albert's road, W.

SURVEYING, LEVELLING, and CIVIL ENGINEERING.—PRACTICAL FIELD INSTRUCTION given in Surveying, Levelling, Civil Engineering, &c.

For Particulars apply at the Establishment of Messrs. HYDE, SMITH, & LEWIS, Civil Engineers, Surveyors, &c. for giving Instruction in every branch of the Profession. Terms for the Course of Three Months, Two Guineas. No Extras. 24, Guilford-st. Russell-square.

ARCHITECTURAL and ENGINEERING DRAWING CLASSES, for Architects, Builders, and Engineers' Sons, Assistants, Clerks of Works, &c. &c. Established by Messrs. HYDE, SMITH, & LEWIS, Architects, Civil Engineers, &c. for giving DAY and EVENING INSTRUCTION in Architectural Engineering, and Mechanical Drawing, Perspective, Isometrical and Geometrical Drawing; Making Finished and Working Drawings; Preparing Specifications, Taking out Quantities, Estimating Builders' Work, &c. Terms:—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter, Five Evenings per Week, from 7 to 10. Plans are to extras. The Terms include the whole of the above, with the use of Drawings, Boards, Squares, &c.—For Prospectuses of the Drawing Classes, apply at the Establishment, 24, Guilford-st. Russell sq.

TO INVENTORS.—All intending Patentees should procure the PRINTED INFORMATION regarding Patents—their cost, and the mode of procedure to be adopted—issued gratis by the General Patent Company (limited), 71, Fleet-street, London. ROBERT M. LATHAM, Secretary.

London: Printed by CHARLES WYMAN, Printer, at the Printing-office of Cox & Wyman, Nos. 74 and 75, Great Queen street, Lincoln's-Inn-fields, in the Parish of St. Giles-in-the-fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," No. 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, March 14, 1863.

Sec. at 13, Stratford place, W.

A. J. B BERESFORD HOPE, President.
GEORGE GILBERT SCOTT, Treasurer.
JOSEPH CLARKE, Hon. Sec

LEGAL NOTICE.—To RAILWAY COMPANIES, CONTRACTORS, LANDED PROPRIETORS, SHIPBUILDERS, IRONFOUNDERS, WIRE FENCE MAKERS, and OTHERS.

Whereas, FRANCIS MORTON, of James-street, Liverpool, in the County of Lancaster, Engineer, having obtained Letters Patent for Improvements in the Construction of Posts or Pillars for Wire and Iron Fences, which are dated the 31st of March, 1858, as I amended by Disclaimer 4th July, 1861, and having ascertained that imitations of those improvements had been attempted and advertised by various parties in the United Kingdom, brought an action before the Court of Session, in Scotland, against ROBERT MIDDLETON, Commission Agent and Wire Merchant, of No. 3, Greenside street, Edinburgh, for an Infringement of said Letters Patent, in which action issues were adjusted and tried before the Lord President and a jury, on the 22nd, 23rd, and 24th days of December last, and a unanimous verdict upon all the issues raised was returned in favour of the said FRANCIS MORTON, thereby establishing the Patent.

And further, the said ROBERT MIDDLETON having by his counsel moved the first division of the said Court of Session for a new trial, on the ground of the said verdict being contrary to evidence, in support of which it was pleaded that the aforesaid specification was a defective specification, and also that the invention had partly been in use before the date of the Patent; the Judges of the said division, after hearing a full argument upon the legal objections to the specification and the Patent, and having made avizandum, they on the 6th of March, 1863, unanimously refused the motion, thereby sustaining the validity of the Patent.

Notice is therefore hereby given, that all persons who have manufactured, sold, bought, contracted for, or used any imitation of the said Posts or Pillars, have been guilty of an infringement of the said Letters Patent, and have rendered themselves liable in damages therefor; and that all persons who may hereafter manufacture, sell, buy, contract for, or use any imitation of the said Posts or Pillars, shall be guilty of an infringement of the said Letters Patent, and will be prosecuted accordingly.

PARKER, ROOKE, & PARKERS, 17, Bedford-row, London,
GIBSON CRAIG, DALZIEL & BRODIES, 9, Thistle-street, Edinburgh.
D. & T. FITZGERALD, 20, St. Andrew-street, Dublin,
Law Agents for FRANCIS MORTON & CO. of James-street, Liverpool.

IN CHANCERY.—Between Joseph Foster Lloyd, Wilson Lloyd, and William Henry Lloyd, Plaintiffs, and Daniel Pearson, Defendant.

NOTICE is hereby given that an ORDER for an INJUNCTION has this day been made in the above cause, by his Honour the Master of the Rolls, to restrain the above-named defendant, Daniel Pearson, from drawing, accepting, endorsing, giving, or negotiating any Bill of Exchange or Promissory Note in the name of "The Madeley Coal and Iron Company," or in the name of "Lloyd, Pearson, & Lloyds," or in any other name or names by which the above-named plaintiffs, or their partnership effects, are or may be rendered liable to pay the same, or from otherwise charging the credit of the partnership in any way; and all persons are hereby cautioned against discounting, receiving, or negotiating any such Bills of Exchange or Promissory Notes, or having any dealings with the said Daniel Pearson whereby he may attempt to pay or to engage the credit of the plaintiffs or their partnership effects.—Dated this 11th day of March, 1863.

S. F. MILLER & SON,
Sussex Chambers, Duke-street, St. James's, London, Agents for JOHN HUNT THURSFIELD, Wednesbury, Staffordshire, Solicitors for the abovenamed Plaintiffs.

NOTICE is hereby given, that the PARTNERSHIP heretofore subsisting between DANIEL PEARSON and us, the undersigned, JOSEPH FOSTER LLOYD, WILSON LLOYD, and WILLIAM HENRY LLOYD, in the business of Coal and Iron Masters, carried on by us at Madeley, in the county of Stafford, under the style or firm of "The Madeley Coal and Iron Company," or under any other style or firm whatsoever, was DISSOLVED by us as to the said DANIEL PEARSON, on TUESDAY, the 10th day of MARCH instant, by virtue of a power contained in our partnership deed; and from that date the said DANIEL PEARSON has ceased to be in partnership with us.—Dated this 11th day of March, 1863.

JOSEPH FOSTER LLOYD.
WILSON LLOYD.
WM. HY. LLOYD.

BILLING'S PATENTS.

CHIMNEY TERMINALS, THROAT VALVES.

NOTICE to ARCHITECTS.—The Proprietors of the late Mr. Billing's Patents have secured the services of Mr. H. H. COLLINS, M.B.A. of No. 10, Poultry, E.C. as the Consulting Architect, from whom full particulars and the reduced prices may be obtained; or from the Manager, Mr. TYLER, 19, Abingdon-street, Westminster, S W.

COMPETITIONS.

TO SCULPTORS.—The Executive Committee of the Oastler Monument will be glad to receive DESIGNS and PROPOSALS from Sculptors, for a MONUMENT to the late Richard Oastler, which is to be erected in Bradford. The statue is to be placed upon a pedestal, in a speaking attitude, and to have, at the base, small figures of factory children supplicating the great philanthropist to redress their grievances. The cost of the Statue, which is expected to be colossal, is not to exceed £1,000 and the design most approved will have the preference of the Committee. The committee are open to receive a DESIGN for a FIGURE, in marble, under a Gothic canopy, with groups of factory children in basso-relievo on the pedestal. Communications may be addressed to W WALKER, Esq Bolling Hall, Bradford, the Chairman of the Executive Committee.

Bradford, March 4, 1863.

ABERYSTWYTH CEMETERY. — The Burial Board being about building TWO CHAPELS and a LODGE, upon the new cemetery provided for the parish of Aberystwyth, Architects are invited to submit PLANS of such Chapels and Lodge, the entire cost of which not to exceed £600. One of the Chapels is to be built on the consecrated portion of the Cemetery, and the other on the unconsecrated portion thereof, in lieu to be detached, and each Chapel is to contain sittings for one hundred persons. The Plans will award of £5, by way of premium, for the plan selected.—Further particulars may be obtained from the undermentioned, to whom the plans are to be sent, free of expense, on or before the 2nd day of APRIL, 1863.

HUGH HUGHES,
Clerk to the Burial Board, Aberystwyth.

CONTRACTS.

WAR DEPARTMENT CONTRACT. NOTICE to BUILDERS.—Tenders are required for the supply at the Vern Fortifications, Portland, and the Nottle Fortifications, Weymouth, of TOOLS, timber, iron, steel, nails, coal, and other PLANT which may from time to time be required for the War Department Works, in the Portland District, from 1st APRIL, 1863, to 31st MARCH, 1864, inclusive

Parties desiring to Tender for the above must leave their names at this office on or before the 23rd day of MARCH, 1863, and pay the sum of 10s. 6d. for the printed schedule of prices.

The Secretary of State for War reserves to himself the right of rejecting the whole or any of the Tenders, and does not bind himself to accept one Tender for both places.

C. H NUGENT,
Captain and Major commanding Royal Engineers.
Royal Engineer Office, Weymouth, 11th March, 1863.

EXTENSION of TIME for receiving TENDERS.—CITY of LONDON, BARBERS' HALL.—Important SITE for WAREHOUSES or MANUFACTURING PREMISES in the immediate vicinity of Wood street, Cheapside. The Committee of the Worshipful Company of Barbers will meet at their Hall on THURSDAY, the 26th day of MARCH, 1863, to receive TENDERS for LETTING, on a Building Lease for 99 years, the Extensive PREMISES known as Barbers' Hall, situate on Monkwell street, Wood street, comprising three Houses fronting Monkwell-street, Nos. 33, 34, and 35; part of the courtyard in the rear thereof, the passage leading thereto, and the greater portion of the Company's Hall, together with the kitchen, scullery, and outbuildings, having a frontage towards Monkwell-street of about 83 feet, by an average depth of about 116 feet, and an extreme depth of about 135 feet.—Full particulars, with a plan of the property, elevation and section of street-front, also conditions of letting, may be obtained on application to the Clerk of the Company; to Mr. CHARLES JOHN SHOPPEE, the Company's Surveyor, No. 61, Doughty-street, W.C.; or to the Beadle at the Hall.—By order,

HENLEY GROSE SMITH, Clerk.
4, Warnford-court, Throgmorton-street, E.C.

NEW GENERAL INFIRMARY at LEEDS.—CONTRACT for WORKS.—The Committee invite TENDERS for the EXECUTION of the various WORKS required in the ERECTION of this Building. Plans, specifications, and general conditions may be inspected in the Public Prosecutor's Room, in the Town Hall, Leeds, on and after MONDAY, the 16th of MARCH, between the hours of NINE and SIX, after which date the conditions of competition may also be had on application personally or by letter to Mr JOHN DIXON, Secretary, General Infirmary. Persons desiring to Tender who have sent in their names to the Honorary Secretary before the 22nd instant, will be entitled to make such arrangements as they consider best as to the taking out of quantities, and such arrangements will be binding upon those who may apply at a later time. The Committee do not bind themselves to accept the lowest or any Tender.

ROBT BARR, } Honorary
T. P. DIBB, } Secretaries.
Leeds, March 4th, 1863.

CONTRACTS.

CHELTENHAM CEMETERY.—To BUILDERS.—Notice is hereby given, that the Cheltenham Burial Board intend to enter into a CONTRACT for ERECTING the CHAPELS and other BUILDINGS at the Cheltenham Cemetery, according to the specifications and drawings, form of contract, and bond, which may be seen at the Office of the Architect, Mr. W. H. KNIGHT, The Old Farm, St. George's-place, Cheltenham. Proposals or Tenders to be delivered to Mr. G. E. WILLIAMS, Clerk to the Burial Board, on or before WEDNESDAY, the 1st day of APRIL next evening, at the Offices of the Burial Board, in Cheltenham, known as the Public Offices, between the hours of TEN a.m. and FOUR p.m. endorsed "Tender for Buildings, &c at the Cheltenham Cemetery," and such Tenders to contain the names, residences, and descriptions of two sureties for the due execution of the contract. The Tenders may be for the whole of the Works, or separately for the chapels and lodge. The Board will not be considered pledged to accept the lowest or any Tender.—Dated this 2nd day of March, 1863.

GEORGE EDMUNDS WILLIAMS,
Clerk to the Cheltenham Burial Board.

SOUTH-EASTERN RAILWAY.—CONTRACTS for WORKS.—The Directors of the South-Eastern Railway Company invite TENDERS from competent contractors for the CONSTRUCTION and MAINTENANCE of the first and third sections of the Company's NEW LINES to TUNBRIDGE and DARTFORD; and they will also be prepared to receive further Tenders for the construction of the second section between Tunbridge and Halstead. Plans, sections, and specifications of the works may be inspected at the Engineer's Office, London Bridge; and copies may be had on payment of £1 1s. for set for each contract, or £31 10s. for the whole, on and after MONDAY, the 16th of MARCH, instant. The Directors also invite separate Tenders for the supply of about Forty Millions of Bricks, required for the construction of the Tunnels at Sevenoaks and Polehill. Tenders to be delivered to the Secretary not later than TEN, a.m., on THURSDAY, the 26th of MARCH next, when the Directors will meet to consider the same, in connection with the Tenders already sent in in answer to the Company's advertisement of the 16th January last, for the construction, &c. of the second section from Tunbridge to Halstead. The Directors do not bind themselves to accept the lowest Tender, and reserve the right of letting the contracts as a whole, or separately, as may be determined. In any case ample security will be required.—By order,

S. SMILES, Secretary.
London Bridge Terminus, 12th March, 1863.

WOOD FENCING.—TENDERS Wanted for the supply and fixing of a quantity of FENCING, at "The Retreat," Clapham, according to Specification lying at the office of "The Builder," York-street, Covent Garden, until THURSDAY next, 26th instant, on or before which day Tenders are to be sent to JOHN BUSH, Esq "The Retreat," Clapham. The lowest Tender will not necessarily be accepted

CONSERVATIVE LAND SOCIETY.—WOODHOUSE ESTATE.—TENDERS are invited for the EXECUTION of ROADMAKING and DRAINAGE WORKS on the Society's Estate in Cann Hall Lane, Wanstead, Essex. The following rough quantities are stated in order to give an approximate the extent of the proposed works; but parties tendering will have to take out quantities for themselves.

1,230 Feet run of New Road, 36 feet wide, including Footpaths.
600 Feet run Widening Old Road, including Footpaths.
800 Feet run Footpath, and making good to existing Road.
815 Feet run 9-inch Pipe, for Road Drainage.
295 Feet run 12-inch Pipe, for Road Drainage.
238 Feet run 12 inch Pipe in course of Ditch.
278 Feet run 15 inch Pipe in course of Ditch.
96 Feet run 9 inch Branch Drains from Gulleys.
11 Gulley Grapnels, in Rolling Gratings.
3 Absorbing Wells, including Gratings.

The plans, sections, details, and specifications will be seen on and after MONDAY, MARCH 23rd, at the Office of the Society's Surveyor, Mr. JAMES WILSON, 61, Norfolk-street, Strand, W.C. Tenders to be sent in on or before SATURDAY, MARCH 28th. The Committee do not bind themselves to accept the lowest or any Tender.

33, Norfolk-street, Strand, W.C. March 19th, 1863.

BOARD of WORKS for the HACKNEY DISTRICT.—Notice is hereby given that the Board of Works for the Hackney District, will, at their meeting to be held at the Town Hall, Church-street, Hackney, on THURSDAY, the 26th day of MARCH next at ELEVEN o'clock in the FORENOON, consider TENDERS for the SUPPLY and LAYING DOWN of about 150,000 feet superficial of the best YORK PAVING, not less than 3 inches in thickness, to be laid in various streets within the District, under contract No. 2; also for a like quantity under contract No. 4; also for Jobbing Masons' and Paviors' work within the District for the period of twelve months. Forms of Tender and further particulars may be obtained at the Office of Mr. JAMES LOVEGROVE, C.E., Surveyor to the Board, Town Hall, Church-street, Hackney, between the hours of NINE and TEN o'clock a.m. Tenders to be sealed and endorsed accordingly to the respective contract, and addressed to the Clerk, Town Hall, Church-street, Hackney, on or before WEDNESDAY, the 25th day of MARCH next. The parties tendering, or their representatives, must attend the Board on THURSDAY, the 26th day of MARCH next, at ELEVEN o'clock a.m. Persons tendering will be required to enter into a Bond or Contract at their own expense for the due performance of the contract, and the Board do not bind themselves to accept the lowest or any Tender.

RICHARD ELLIS, Clerk.
17th March, 1863.

TO TIMBER-MERCHANTS and OTHERS. The Directors of the London, Chatham, and Dover Railway Company are prepared to receive TENDERS, on or before the 22nd instant, for the SUPPLY of 10,000 creosoted rectangular SLEEPERS, 10 inches by 5 inches, to be delivered free, on their Wharf, at Faversham. The specification and form of tender may be had on application at the Office of Mr. WILLIAM MILLS, the Resident Engineer, 34, Castle-street, Canterbury. The directors do not bind themselves to accept the lowest or any Tender.—By order,

G. F. HOLROYD, Secretary.
Victoria Station, March 11, 1863.

[For remainder of Contracts see next Page.

CONTRACTS.

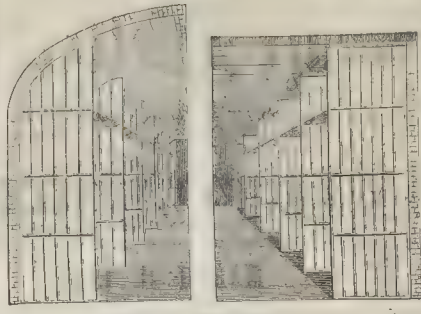
PARISH of ST. GILES, CAMBERWELL.
To CONTRACTORS for ROAD and STREET WATERING.—Notice is hereby given, that the General Purposes Committee will meet at the Vestry Hall, Camberwell, on WEDNESDAY, the 25th day of MARCH instant, at FOUR o'clock in the Afternoon, to receive TENDERS for WATERING certain ROADS and STREETS of the said Parish, for the season 1863. The Parish is divided into six Watering Districts, and separate Tenders will be required for each District. The security of two responsible persons will be required for the due performance of the Contract, and the names and addresses of the parties proposed as such sureties must be delivered with the Tender. Parties Tendering are required to be in attendance at the time and place above named. The Vestry do not bind themselves to accept the lowest or any Tender. For further particulars apply to Mr. J. REYNOLDS, at the Vestry Yard, in the Office of Works, Wells-street, Southampton-street, from ELEVEN to THREE o'clock.
By order, GEORGE WILLIAM MARSDEN, Vestry Clerk.
Vestry Hall, Camberwell, 16th March, 1863.

NEW QUAY, CARDIGANSHIRE.
To BUILDERS and OTHERS.—Persons willing to submit TENDERS for TAKING DOWN and REBUILDING the PARISH CHURCH of Llanllwchaiarn, New Quay, Cardiganshire, are informed that the Drawings and specification will be for inspection at the Black Lion Inn, New Quay, from MONDAY, 23rd inst. to SATURDAY, 4th of APRIL, inclusive. Tenders, to be completed, to be sent by post, prepaid, addressed to the Architect, Mr. R. J. WITHERS, 51, Doughty street, London, W.C. on or before MONDAY, 6th APRIL, and of whom further particulars may be obtained. The lowest or any Tender will not necessarily be accepted.
D. EVANS, B.D. Rector of Llanllwchaiarn.
Llanllwchaiarn Rectory, 13th March, 1863.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of TWO FOURTH-RATE HOUSES, in Wansloe-street, Plaistow March, in the Barking road, Essex, can see the Plans at that station, on MONDAY, 23rd inst. And Four following days, at JACKSON'S COFFEE HOUSE, 5, Christ-street, East India road, Poplar.

TO PAINTERS and OTHERS.—
TENDERS required for the EXTERNAL PAINTING and COLOURING of TWENTY HOUSES at Poplar. Labour and Materials.—Apply at H. M. RAMSAY'S Workshops, Randall road, as above.

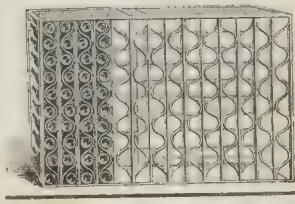
METROPOLITAN BOARD of WORKS.
The METROPOLITAN BOARD of WORKS hereby give Notice, that on FRIDAY, the 8th of MAY next, they will receive TENDERS for the DISPOSAL by SALE, under the Main Outfall Sewer. All Tender must contain full description of the works proposed, and must be accompanied by a plan and section showing their exact details. The Board will further require full information as to the manner in which the sewage is to be treated and employed, and, if by irrigation, as to the distribution of the sewage, the quantities and locality of the land over which it is to be distributed, the points at which the sewage will be put, or will daily require to be emptied, for the purpose of effecting junctions or communications with the Board's sewers, the provisions against floods, failure of machinery, or other default in the company's works, the mode of discharge of the sewage preventing the sewage from becoming a nuisance or injurious to health, the amount of capital to be invested, whether any interest or dividend is required, the estimated annual receipts expected to be paid to the Board. The Board will not enter into any contract, or make any concession of sewage to any parties, unless they take all steps necessary for carrying their project into effect within a time to be named by the Board; and in the event of failure to do so, any agreement or concession on the part of the Board shall be void and of no effect; and in any contract provision must be made to secure to the Board the return of the sewage works, and the full power to re-let and deal with the same, and no further or other compensation than the value of the materials or the amount expended by the company, as it will seem, cost to the Board. No Tender must contain more than one proposition, to be approved by the Board, but shall specify the terms upon which the Tenderer will be bound in a competent sum, for the due performance of the contract, and for the efficient execution of the Works in accordance with the provisions and subject to the limitations of the Metropolis Local Management and Main Drainage Acts, and for indemnifying the Board against all loss, damage, or injury, claims for compensation, or otherwise, in any manner arising out of the said Works or other operations of the contractors. The Board will not bind itself to accept the highest or any Tender. The plans and sections of the sewers can be seen, and all general information obtained at the Office of the Engineer of the Metropolitan Board of Works, at their office in Spring gardens, between the hours of NINE a.m. and FOUR p.m., or on SATURDAYS between NINE a.m. and TWO p.m. The Tenders are to be addressed to the Clerk of the Board, and must be delivered at this Office before FOUR o'clock on THURSDAY, the 7th of MAY next, and no Tender will be received after that hour. By order,
JOHN POLLARD, Clerk of the Board



AYSGARTH CHURCH, Wensleydale.—
The Master and Seniors of Trinity College, Cambridge, and the Parishioners of Aysgarth, having determined to REPAIR and RESTORE the above Parish Church, are desirous to receive the names of persons willing to UNDERTAKE the Works connected with the same, which may be addressed to J. GREEN, Architect, Perth-street, near Todmorden, on or before the 25th instant. Drawings and specifications will in a short time be ready for inspection, of which due notice will be given. Quantities will be supplied.

TO BUILDERS.—Persons desirous to TENDER for the ERECTION of new Presbyterian CHURCH and SCHOOLS at Aberdeen, are invited to call at Mr. TILBURY'S, Royal Hotel, Aldermanbury, or at the MARK Hotel, Leith. Copies of the plans will be supplied on application at the above Hotels, for the sum of 5s. per copy. Tenders to be sent to me on or before the 31st day of MARCH next. Neither the lowest nor any Tender will necessarily be accepted.
C. B. MUSSELWHITE, Architect, Basingstoke.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a MANSION, at Saltburn-by-the-Sea, may see the plans, specifications, &c. and obtain bills of quantities, at the Office of Mr. WILLIBRAND RODRICK, 7, Park-place, Leeds, on and after WEDNESDAY, the 25th instant. Each of the contractors may also be obtained at the Office of Mr. BALAM, Surveyor to the Board, 3, Basinghall-street, Guild, London, W.C. Tenders are to be delivered to the Clerk of the Board of Guardians, Guisborough, on the 2nd day of APRIL next. The lowest tender will not necessarily be accepted.
Saltburn is about five miles from Redcar, in the North Riding of Yorkshire.
14, Buckingham-street, Strand, London, March 11th, 1863.



BOARD of WORKS for the HACKNEY DISTRICT.—Notice is hereby given, that the Board of Works for the Hackney District will meet at the Town Hall, Church-street, Hackney, on THURSDAY, the 26th day of MARCH next, at ELEVEN o'clock in the forenoon, for the purpose of CONTRACTING for the SUPPLY of ENGINEERING MATERIALS and WORKS and MATERIALS for the period of ONE YEAR, ending the 25th day of MARCH, 1864, for the supply of Bricks and Bricklayers' Work — STONEWARE PIPES for the Supply of Glazed Stoneware Sewer and Drain Pipes — BALLAST—For the Supply and Delivery of Ballast, Shingle, and Gravel — GAS FITTINGS—For the Supply and Fixing of Lanterns, Lamp Brackets, Pipes, and Service Pipes, Retorting, Altering, and Fixing Lamp Posts — IRON CASTINGS—For the Supply of Fifty Cast Iron Lamp-Posts (to patterns).
Forms of Tender and Specification may be obtained at the Office of Mr. JAMES LOVEGROVE, C.E. Surveyor to the Board, Town Hall, Hackney, between the hours of NINE and TEN o'clock, a.m. The Tenders are to be sealed, and addressed to the Clerk, and delivered at the Town Hall, Hackney, on or before the 25th day of MARCH. The parties tendering, or their representatives, must attend at the Board, on THURSDAY, the 26th day of MARCH, at ELEVEN o'clock precisely, when such tenders will be required to enter into a contract and bond, at their own expense, in sufficient surety for the due performance of the contract, and the Board do not bind themselves to accept the lowest or any Tender.
RICHARD ELLIS, Clerk.
March 17, 1863.

WROUGHT IRON WINE BINS.

FARROW & JACKSON
Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING THIRTY YEARS.
The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.
Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom. Also their

NEW REGISTERED IRON BINS,

WITH
SEPARATE REST FOR EACH BOTTLE,
Peculiarly adapted for Private Cellars.
No laths are required, and all trouble of Binning is avoided.
FARROW & JACKSON,
18, 17, and 16, GREAT TOWER STREET; and 1, HARP LANE.
FACTORY, 57 and 58, MANSELL STREET.

TO BUILDERS and MASONS willing to TENDER for BUILDING a DETACHED VILLA at Bletchingley, near the Regalia Station. Can inspect the drawings and specification at the Office of the Architect, who reserves the right, on behalf of the freeholder, of rejecting the lowest or any Tender. Persons tendering will have to be provided with security for the fulfilment of the works. Tenders to be delivered on TUESDAY, the 7th of APRIL, at FOUR o'clock precisely.
HENRY McCALL, C.E. Architect,
Offices—Seaside road, Eastbourne, Sussex, and
25, Westbourne-place, Eaton-square, S.W.

TO BUILDERS.—POLICE STATION, SLOUGH, BUCKS.—Persons willing to CONTRACT for PULLING DOWN the existing Building, and for ERECTING a New POLICE STATION, at Slough, in the county of Buckingham, are invited to inspect the plans and specifications of the works, and to transmit Tenders, on or before TEN o'clock of the morning of the 2nd day of APRIL next. TENDERS for executing the work. The plans, specifications and conditions may be seen at the Office of Mr. W. WILKINSON, the Architect, in Oxford, and copies of the same may also be seen on application to the superintendent of Police, at the present Station at Slough. Builders desirous of competing for the work are requested to make application to the Architect, who will be authorized to supply copies of the bills of quantities upon payment of £1. for each copy. The Magistrates of the County do not bind themselves to accept the lowest or any Tender; and the person whose Tender may be accepted will be required to enter into a contract for the due performance of the works.
ACTON TINDAL, Clerk of the Peace for Bucks.
County Hall, Aylesbury, 19th March, 1863.

TO CONTRACTORS. — CONCRETE BRICKWORK and MASONRY.—The Oxford Paving Commissioners are prepared to receive TENDERS for CONSTRUCTING a BRICKWORK OPEN INVERT and Footpath on the North Side of Thames Street, from the point where the present Invert ends, at the Tan Yard, St. Ebbe's, to Swan Island, in the City of Oxford. The plans, section, drawings, and specifications of the required Works, and the general conditions of the Contract under which the Works are to be done, may be seen daily between the hours of TEN and FOUR, at the Office, No. 7, St. Aldate's street, Oxford, of Mr. GALPIN, the Surveyor to the Commissioners. Tenders are to be made on a printed form, which may be had of the Surveyor, or the Clerk to the Commissioners, and are to be delivered sealed, at my Office, No. 3, St. Giles-street, Oxford, on or before MONDAY, the 6th of APRIL next. The Commissioners do not bind themselves to accept the lowest or any Tender.
FREDERICK J. MORRELL, Clerk to the Commissioners.
St. Giles's, Oxford, 13th March, 1863.

BURNHAM GAS COMPANY, Limited.
Persons willing to CONTRACT with the Directors of the Burnham Gas Company, Limited, for the ERECTION of the GASWORKS at Burnham, in the County of Essex, may see the plans and specifications on application to the Secretary, or at the Office of Mr. JABEZ CHURCH, the Engineer, Cannon-street. The work is to be Tendered for in the two following Contracts, viz.—
CONTRACT No. 1. The Builders' Work.
CONTRACT No. 2. The Ironwork, Mains, and Apparatus.
Sealed Tenders for the respective Contracts are to be delivered at the Engineer's Office, Cheltenham, on or before the 2nd day of APRIL, 1863. The Directors do not bind themselves to accept the lowest or any Tender. By order,
W. HAWTHORN, Secretary
Gas Company's Office, Burnham, March 20th, 1863.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CABINETMAKERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction. It is economy.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.
ESTABLISHED 1774

PERIN'S PATENT BAND SAW BLADES.
E. WORMSAM & CO. beg to announce that they have purchased of Mons. Perin, of Paris, the exclusive right to SELL his celebrated BAND SAW BLADES, the superiority of which is universally allowed in the United Kingdom. S. W. & Co. have always a large assortment of these Saws at their Works, 304, KING'S-ROAD, CHELSEA, S.W. where also the Band Saw Machine exhibited by Mons. Perin in the Western Annexe, International Exhibition, is now on sale.

TO IRONMONGERS, BUILDERS, &c.
PATENT WROUGHT-IRON WELDED TUBE for GAS; Galvanized ditto, for Water; High-pressure Cocks, &c. Manufacturers of Dr. Arnott's Improved Ventilators.
HULETT & CO. 55, High Holborn.

SAVING IN GAS.
D. HULETT, INVENTOR and PATENTEE. The Mercurial Gas Regulator is the only efficient instrument for insuring wholesome and uniform lighting, equalizing the pressure, and preventing any irregularity in the height of the flame.
D. HULETT & CO. 55, High Holborn, London,
Manufacturers of Gas Chandeliers, Glass Lustres, &c. &c.

COOMBS & McCALL, Dover Iron Works,
Staple-street, Long-lane, Borough, S.E. (late H. G. COOMBS), 17, Union-street, and 39, Great Guildford-street, Borough, S.E. inventor of the Rotary Shoe Front, Patentee of the Tubular Railings, new Compensating Garden Trees, &c. &c.
GENERAL IRON FOUNDERS,
MERCHANTS, and PATTERN MAKERS.

INTERNATIONAL EXHIBITION, 1862.—CLASS 31, LOCKS, &c. No. 6105.

HOBBS'S CELEBRATED MACHINE-MADE LEVER LOCKS,

Suited for all purposes, at Prices that silence competition.

SUITES OF LOCKS FOR MANSIONS, WAREHOUSES, AND OTHER LARGE STRUCTURES, WITH OR WITHOUT MASTER KEYS.

PUBLIC BUILDINGS OF EVERY KIND FITTED.

The parts in the Plate marked F and C show the form of Hobbs's Patent Frictionless Follower and Crank, by which a rolling instead of a rubbing motion is produced, thereby preventing friction.

S, s, shows the double spring, by which means the Latch is allowed to work independent of the Crank in shutting the door, thereby avoiding the necessity of slamming; at the same time sufficient strength is given by the Follower Spring to throw the heaviest knobs or handles.

HOBBS' PATENT FRICTIONLESS FOLLOWER, & DOUBLE SPRING FOUR LEVER MORTISE LOCK, Price 8s.

FIREPROOF SAFES, IRON DOORS, CASH BOXES, &c.

HOBBS'S PATENT PROTECTOR LOCK, AND CHANGEABLE KEY BANK LOCK FOR SPECIAL SECURITY.

ESTIMATES AND ILLUSTRATED PRICE LISTS FURNISHED ON APPLICATION.

For specimens of all the varieties of these LOCKS, and the different stages of manufacture by machinery, from the first to the last process, see HOBBS'S STAND in the EXHIBITION, CLASS 13, No. 6105, ON THE SOUTH-WEST SIDE OF THE EASTERN DOME.

with all the recent Improvements,
STRONG FIRE-PROOF SAFES, CASH AND DEED BOXES.
Complete Lists of Sizes and Prices may be had on Application

CHUBB and SON,

57, ST. PAUL'S CHURCH-YARD, LONDON,
28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

FIRE-PROOF CONSTRUCTION.—

FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most certainly very adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of plats of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,

12, YORK BUILDINGS, ADELPHI

LAMBERT, BROTHERS, Manufacturers

of Lap welded Boiler Tubes, Locomotive and Marine Engine Fittings, Wrought Iron Welded Pipe, for Steam, or High-pressure Water and Gas; High pressure Steam and Water Valves, Hydraulic Machinery, Pumps, Cranes, &c., Stocks Taps and Dies, Chandeliers, and Patent Metallic Bedsteads—Walsall.

IRON ROOFING of CORRUGATED IRON,

Wrought Iron, principal Roofs covered with Slates, Iron Bridges Girders, and Railings; also Portable Buildings for Dwellings, Farm Purposes, Churches, Chapels, Schools, Theatres, Concert or Dancing Rooms, &c. suitable to all Climates, fixed complete in town or country, or packed for exportation.

BENSON'S WATCHES AND CLOCKS.

"Perfection of Mechanism."—*Morning Post.*

Watches and Clocks of every description, from the plainest to the highest quality of which the Art is at present capable.

BENSON'S ILLUSTRATED PAMPHLET (free by post for two stamps) ON WATCHES contains a short History of Watchmaking, with descriptions and prices. It acts as a guide in the purchase of a Watch, and enables those who live in Scotland, Ireland, Wales, the Colonies, India, or any part of the World, to select a Watch, and have it sent free and safe by post.

Watches.	Clocks.
Chronometer, Duplex, Lever, Horizontal, Vertical, Minute, Box-maker, and Quarter Repeaters, Independent and Plain Centre Seconds, Keyless, Chronographs, Enamelled, Astronomical, and Reversible Watches.	Drawing-room, Dining room, Bed room, Library, Hall, Staircase, Bracket, Carriage, Chime, Musical, Astronomical, Church, Turret, Stable, Railway, Post office, Shop, Warehouse, Office, or Counting-house.
FROM 200 Guineas TO £3. 3s. each.	FROM 1,000 Guineas TO £1. 1s. each.

Clocks and Bronzes manufactured from High Art Designs by English, French, and Italian Artists of great celebrity.

ESTIMATES GIVEN FOR CHURCH AND TURRET CLOCKS.

OPINIONS OF THE LONDON PRESS UPON BENSON'S GREAT CLOCK AND WATCHES.

"As a sample of English clockwork on a large scale, the works of this are probably the finest finished that have ever been seen in this country. No chronometer could be fitted with more perfect or carefully-adjusted mechanism."—*Times*, June 11, 1862.

"A triumph of ingenuity."—*Telegraph*, March 31.

"The entire finish is of the highest cast."—*Daily News*, May 29.

"A more splendid and exquisitely-finished piece of mechanism we have never seen."—*Standard.*

"The largest, and unmistakably the best finished clock in the Exhibition."—*Engineer*, Aug. 15, 1862.

"Some of them are of great beauty; and if the English watch-trade only follow up with the same spirit and success this first attempt to compete with foreigners in decorative watches, there seems to be no reason why we should not get the trade entirely into our own hands."—*Times*, June 23.

33 & 34, Ludgate-hill, London.—Established 1749.

THE PRIZE MEDALS

(LONDON, 1851. PARIS, 1855. LONDON, 1862)
Awarded to

COTTAM & COMPANY,

2, WINSLEY STREET, LONDON, W.
For progressive and general improvements in
STABLE FITTINGS AND HARNESS BRACKETS.

Awarded a prize at the Paris Exhibition,
Patronized by the English and French Governments, as well as by the Principal Nobility, Gentry, and Hunting Establishments in the kingdom.
In use at her Majesty's Stables, Aldershott and Balmoral.

COTTAM & COMPANY, Winsley-street, W. are the original Inventors of the PATENT ENAMELLED MANGER, Watertrough, and Wrought-iron Rack, united to an iron top-plate, and forming one complete and useful fixture, having COTTAM'S Patent Vapeless Heiter to ride and Collar Rein attached, which is taken to the back of the manger, and works with ease and freedom up or down the glass bar.

COTTAM'S NEW PATENT SEED BOX, an important addition to the above fittings, being simple in construction, light, and durable, promotes cleanliness, and is economical in its results.

COTTAM'S PATENT PERMANENT ATTACHED DROP COVER, for the above, is a most essential addition to their fittings; it is never in the way; can be placed and replaced in an instant; while its cheapness, simplicity, and utility in keeping the contents of the troughs clean, and regulating the quantity to be taken, is quite sufficient to insure its use.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

can be used with great advantage where space is an object, as it can be turned up out of the way when not in use

COTTAM'S IMPROVED WROUGHT-IRON VENTILATING BRACKET preserves the shape and allows a free admission of air to the under parts of the saddle.

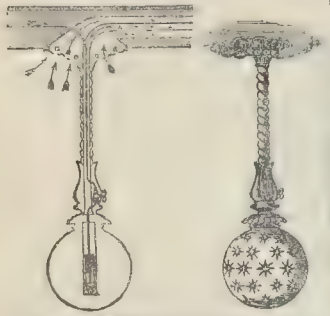
COTTAM'S IMPROVED SURFACE CUTTER, with perforated moveable cover, the use of which prevents accidents, and can be easily cleaned out.

COTTAM'S CAST-IRON SANITARY TRAP, from its improved construction, gives a full water passage, and does not allow any smell to ascend from the drain.

PATENT LOOSE BOX FITTINGS, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron gates, fencing, hurdles, &c.

Illustrated Catalogues and Estimates gratis, upon application to
COTTAM & CO. 2, WINSLEY STREET, Oxford Street, London, W.
WHERE FULL-SIZED STALLS, LOOSE BOXES, AND HARNESS-ROOM, &c. ARE FITTED UP, SHOWING ALL COTTAM'S PATENT IMPROVEMENTS, &c.

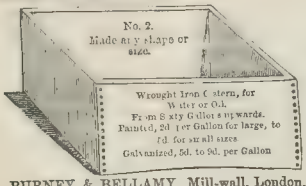
COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.
N.B.—WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.



IRON RAILINGS, for enclosing TOMBS AND GRAVES

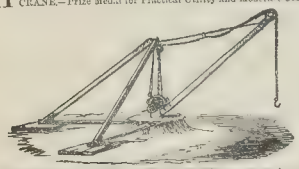
COMMUNION RAILINGS, SCREENS, GATES, &c.
Illustrated price catalogue, of numerous designs, in various styles (free), on application to

COTTAM & CO. IRON WORKS,
2, WINSLEY-STREET, OXFORD-STREET,
LONDON, W.



RICKET'S & HAMMOND'S
VENTILATING GLOBE LIGHT,
combining an agreeable method of lighting, with convenient simple, and efficient ventilation.

The advantages claimed are these —
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.
A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.
5, AGAR STREET, STRAND, LONDON, W.C.



PATENTED HOT AIR APPARATUS in CAST IRON, a mixture of pneumatic tubes, to be applied to chimneys with flues and heat-conduits. By this system is obtained health, durability, a clear fire, security, economy.—An apparatus in use can be seen, every day, at the Office of M. LEWAL, Nos. 5 and 6, Philpot-lane, City.

WROUGHT-IRON TANKS, CISTERNS, GIRDERS, TUNNELS, &c. plain or galvanized; CATTLE TROUGHS, IRON CART BODIES, &c.

BURNEY & BELLAMY, Mill-wall, London.
Steam boats from London Bridge call near the Factory

HENDERSON'S PATENT DERRICK CRANE.—Prize Medal for Practical Utility and Moderate Cost.

HENDERSON'S PATENT DERRICK CRANE, as now largely used in the building of the Embankment, Lambeth Approaches, and Railways, and Railway Bridges, from 10 cwt. upwards. Portable, Foundry, Forge, Wharf, Quarry, Warehouse, and other descriptions of Cranes; also Steam Winches and Cranes on the Derrick principle. Water Companies and others can also be supplied with our Improved Sluice Valves.—For further particulars apply to BOWSER & CAMERON, Makers, Springfield Iron Works, M'Neil-street, Glasgow

NOW OPEN, YOUNG'S IRONMONGERY WAREHOUSE,
No. 24, Davies-street, Three Doors from Oxford-street.

BRICK MOULDS KEPT IN STOCK.
Any Size made to order.
POST-OFFICE ORDERS PAYABLE AT SHOREDITCH.

CUNDY'S PATENT ECONOMIC, BRICK-OVEN, DOUBLE FALL, DOWN-BAR KITCHEN RANGE.

This drawing represents a Range 4 feet long, 2 feet 4 inches high, and 17 in. deep.
The Hob over the top of the Oven forms a HOT PLATE; the fire passes under it and all round the oven, thereby heating it thoroughly and equally all over.
The sliding Hob, which is fastened to the Winding Check, also forms a Hot Plate.
The Oven and Hob can be kept sufficiently hot for the purpose of baking and boiling, with the fire only six inches long.
This Range can be fitted up as a close Kitchener, with Two Ovens, Hot Closets, &c. if required.
This Range, also Cundy's Multum in Parvo Poor Man's Kitchener, also Cundy's Patent ORIGINAL Fire-Brick Warm Air Ventilating Stove, suitable for CHURCHES, HALLS, SCHOOLS, and STAIRCASES,

Can be seen in action every day from Nine till Seven, at the Show Rooms of the MANUFACTURER,
WILLIAM ADDIS,
6, 7, and 15, LEICESTER STREET, LEICESTER SQUARE,
WHOLESALE AND RETAIL IRONMONGER, AND STOVE GRATE MANUFACTURER,
Where Mr. CUNDY can be gratuitously consulted relative to the Cure of Smoky Chimneys.
A PROSPECTUS AND REFERENCES WILL BE FORWARDED ON APPLICATION BY LETTER.

CASTINGS, ANY WEIGHT AND QUANTITY,
With the utmost despatch, at Country Prices.

HENRY GOODWIN, JUN.
IRONFOUNDER, &c.
67, GREAT GUILDFORD ST., BOROUGH.
BUILDERS' AND ENGINEERS' PATTERNS OF EVERY DESCRIPTION.
RIGGERS, FLY-WHEELS, COLUMNS, GIRDERS, &c.
CRABS, BLOCKS, JACKS, MORTAR MILLS, &c.

INTERNATIONAL EXHIBITION, 1863.
Class IX.—Prize Medal for Agricultural Portable Steam Engines and Machinery.
Class VIII.—Prize Medal for Horizontal High Pressure Steam Engines.
For "Good arrangement, good workmanship, and practical success."
CLAYTON, SHUTTLEWORTH, & CO. ENGINEERS,
Manufacturers of Portable and Fixed Steam Engines, Machinery for Pumping, Hoisting, Grinding, Sawing, and Agricultural Purposes, &c. adapted for any part of the World.
STAMP END WORKS, LINCOLN; AND 78, LOMBARD STREET, LONDON.

SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

BOND & SCAMMELL (late Thomas Pugh & Co.)

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

NUT

PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in public and private buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both rim and mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich designs in glass, china, brass, bronzed, gilt, carved woods, dead, &c. &c. of to any design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of locks, latches, brass foundry, and ironmongery, required for buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and particulars sent upon application.

CASTINGS AND WROUGHT IRONWORK

OF EVERY DESCRIPTION.

GLOVER, BROTHERS,

FOUNDERS, ENGINEERS, AND SMITHS,

168, DRURY LANE, AND WORKS ALSO AT SPA ROAD, BERMONDSEY.

Wrought Iron Girders, Flitches and Joists, Conservatories, Verandahs, Circular Staircases, Wrought-Iron Doors, Strong Rooms and Iron Houses, Iron Roofing, &c. &c.

A large Stock of Patterns for Building and other Purposes, for the use of which no extra charge is made. Estimates on application.

Wheelwrights and Contractors—1 Dean-street, Oxford-street, and Parker's-row, Bermondsey.

W. HARMER & SON,

BUILDERS' IRONMONGERS, AND SMITHS, STOVE AND KITCHEN RANGE MANUFACTURERS, IRON AND ZINC MERCHANTS.

WROUGHT IRON FLITCHES and CAST IRON GIRDERS and COLUMNS to Order.

WROUGHT IRON TUBE and FITTINGS for GAS or WATER.

CARPENTERS' TOOLS of the Best Quality. A Reduced LIST of PRICES upon application.

W. HARMER & SON,

3 and 19, HORSEFERRY ROAD, and 1, NEW PETER STREET, WESTMINSTER, S.W.

ESTABLISHED 1817.

TUPPER & CO.'S GALVANIZED CORRUGATED IRON.

IRON BUILDINGS, IRON ROOFS, & IRON CHURCHES erected in any part of the Kingdom.

ILLUSTRATED CATALOGUES POST FREE.

WORKS.—Birmingham, and Limehouse.

Every description of Iron Work Galvanized.

LONDON OFFICE—61A, MOORGATE STREET, E.C.

BURT & POTTS'

PATENT WATER-TIGHT WROUGHT-IRON WINDOW AND FRAME,

FOR CHURCHES, CHAPELS, SCHOOLS, &c. &c.

DESCRIPTION AND PRICES ON APPLICATION.

ALSO MANUFACTURERS OF CONSERVATORIES, SKYLIGHTS, &c.

38 & 65, YORK-STREET, WESTMINSTER.

GALVANIZED IRON AND ZINC WORKS.

GALVANIZED OR BLACK SHEET-IRON, CORRUGATED AND PLAIN ALWAYS ON STOCK

GAS AND WATER TUBING, GUTTERING AND PIPING, WIRE NETTING, TELEGRAPH AND FENCING WIRE.

EVERY DESCRIPTION OF IRON WORK GALVANIZED.

ESTIMATES GIVEN FOR IRON ROOFS, SHEDS, STORES, &c.

VAVASSEUR AND CO.

GALVANIZED IRON AND ZINC WORKS, SUMNER STREET, SOUTHWARK, S.E.

COUNTRY ORDERS PROMPTLY EXECUTED.

All kinds of Smiths' Work.

J. MOORE,

WHOLESALE IRONMONGER,

122, EUSTON ROAD

(near St. Pancras Church),

Opposite J. W. Bird's Marble and Stone Works.

THE CHEAPEST AND BEST HOUSE IN LONDON FOR KITCHEN RANGES, STOVES, NAILS, LOCKS, HINGES, BOLTS, AND EVERY ARTICLE OF BUILDERS' IRONMONGERY.

Priced Lists on application.

ESTABLISHED 1846.

Bedsteads for Rail-way, and Hotels.

PAIR of Horizontal High-Pressure and Condensing STEAM-ENGINES, each of 25-horse power, for SALE, by Private Contract. The cylinders are 1 foot 8 inches in diameter, 5 feet stroke, with metallic pistons, bright connecting rods, slide valves, eccentrics, 8-inch fly-wheel, shaft crank, cast-iron fly-wheel 14 feet diameter, spur mortise wheel 8 feet diameter, and pinion; exhaust pipe, cast iron condenser, cast iron frames, steam and vacuum gauges, pair bright governor balls and apparatus. Made in 1851.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter street, London, E.C.

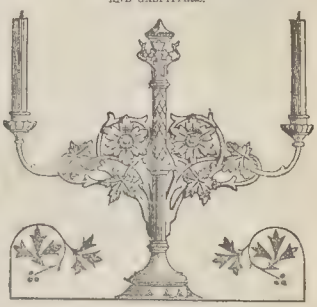
NAILS and IRONMONGERY, from BIRMINGHAM direct.

Builders Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES.

A complete List of which will be forwarded upon application to FRANCIS BIANCHI (late Blyth & Bianchi), Nail Manufacturer and General Factor, BIRMINGHAM, and 10, Gresham-street London, E.C.

HART AND JACKSON

MANUFACTURERS OF



MEDIÆVAL ART METAL WORK

159 · HIGH · HOLBORN · W C

Book of Examples now out of print,—revised & enlarged Edition shortly, meanwhile, SPECIAL DESIGNS & ESTIMATES for WROUGHT IRON & BRASS Gates, Screens, Grilles, Altar & Tomb Railings, Hinges, Vanes, Crosses, GAS-FITTINGS,—Brackets, Standards, Gasseliers, Coronæ, &c., and *EVERY* other *DESCRIPTION* of METAL WORK for Domestic & Ecclesiastical purposes: As also for COMPLETELY & EFFICIENTLY Lighting Churches, Chapels & Public Buildings,—including SERVICE PIPES, METERS, &c., will be submitted upon application.

SHOW ROOMS ALSO AT

20, COCKSPUR STREET, PALL MALL, S.W.

THE FIRST PRIZE THIS YEAR WILL BE "THE DANCING-GIRL REPOSING,"

VALUED AT SEVEN HUNDRED GUINEAS.

ART-UNION OF LONDON,

444, WEST STRAND, W.C.

Instituted 1837. Incorporated 1846.

The Subscription List Closes March 31st.

Every Subscriber of ONE GUINEA will receive an IMPRESSION of a PLATE by H. C. SHENTON and C. H. JEANS, after T. F. DICKSEE,

"A LABOUR OF LOVE;"

together with a Set of SIXTEEN DESIGNS IN OUTLINE, by P. PRIOLO, illustrating ALFRED TENNYSON'S Poem,

"Idylls of the King;"

BESIDES A CHANCE OF ONE OF THE PRIZES AT THE ANNUAL DISTRIBUTION,

which will include the original Life-size Statue in Marble, by W. C. MARSHALL, R.A. of

"THE DANCING-GIRL REPOSING,"

EXHIBITED AT THE INTERNATIONAL EXHIBITION, VALUED AT SEVEN HUNDRED GUINEAS.

ALSO,

BY GRACIOUS PERMISSION OF HER MAJESTY,

PORCELAIN BUSTS OF H. R. H. THE PRINCESS ALEXANDRA OF DENMARK,

reduced expressly and solely for this Society from the original Bust by Mrs. THORNEYCROFT, being the only Portrait in Sculpture for which the Princess has yet sat;

THE RIGHT TO SELECT FOR HIMSELF A VALUABLE WORK OF ART FROM ONE OF THE PUBLIC EXHIBITIONS;

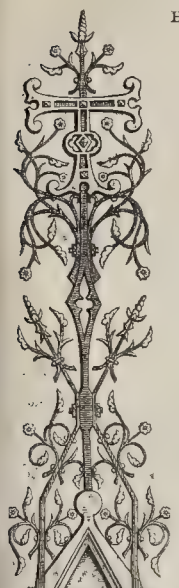
STATUETTES IN BRONZE of "CARACTACUS," from the Original by J. H. FOLEY, R.A.;

TAZZAS in commemoration of H.R.H. the late PRINCE CONSORT, by J. LEIGHTON, F.S.A.;

STATUETTES IN PORCELAIN, entitled "GO TO SLEEP," from the Original by J. DURHAM;

BAS-RELIEFS IN FICTILE IVORY of Subjects from Milton, by E. WYON and R. JEFFERSON; and

BOOKS of ETCHINGS, by E. RADCLYFFE, after the late DAVID COX.



444, West Strand, W.C. February, 1863.

The Builder.

VOL. XXI.—No. 1050.

Copyright in Architecture as in other Works of Art.

THE advisability of copyright in artistic productions is quite a modern—indeed, a very recent — question, and has proved itself a very difficult one. The growing demand for protection produced eventually an Act of Parliament, which, by means of registration, professed to insure protection, for a certain period, to manufactured articles of original design; especially those in which a decorative character is an essential feature. The protection thus afforded has already shown itself to be precarious and incomplete; but it has nevertheless proved a great incentive to the production of original designs, in the course of the elaboration of which the taste of the manufacturers themselves has improved as much as the artistic character of their wares. Yet the protection provided by the Act is continually breaking down when put to the test. This is partly the case in consequence of the imperfect and insufficiently stringent wording of the Act itself, but principally in consequence of the artistic ignorance of the tribunals that have to be appealed to. What can a Chancery Judge be expected to know about the æsthetic qualities of a design for a carpet, its peculiar fitness in an artistic point of view, and those nice divergencies from former patterns which are the secrets of its novelty? What can such a Judge know of the peculiar freshness of aspect which gives it a superior value with the trade, and causes it to be strenuously recommended by the dealers, to the ultimate purchasers and consumers? Neither these men of parchment and precedent, nor those similarly educated who conduct the cases of plaintiff and defendant in an Infringement of Design Case, can be expected to know anything about the real artistic merits of the cause before them. They, in fact, do not know anything about it; and the matter in dispute is decided according to the most plausible drawing up of the affidavits on one side or the other. To show what would be the difficulties likely to occur in architectural cases, it may be useful to describe a case concerning an ornamental design. Very recently an injunction was applied for to prevent the infringement of a carpet pattern. The design had been most successful. Something felicitous about the play of its main lines, and the proportions of the principal features, had at once captivated carpet-buyers. It was found, too, that furniture looked well upon it, and that a drawing-room with a carpet of that pattern received at once a certain air of elegance that most other carpets failed to impart. In short, it sold largely, and formed so important a source of income to the manufacturers, that a piracy of the pattern was soon attempted by a rival house. In the piracy the placing of lines, the size of the main features, and their form, and *apparently* even their smallest details, were all so closely imitated, that a carpet might have been made of alternate breadths of the original pattern and the imitation, without attracting the notice of a casual observer to the fact that they were, in truth, distinct patterns. The defendants pleaded that, whereas in the pattern of the plaintiffs the main compartments were formed of a purple twisting *ribbon*, in theirs they were formed by a purple twisting *lace*; and that, while in the pattern of the plaintiffs the object in the centre of each compartment was formed of a group of fern-leaves, the corresponding object in the defendant's pattern was formed of a group of moss. The general effect was strikingly similar; and, at the distance at which a carpet is generally seen, the effect may be said to have been identical. The learned Judge, however, decided that, because one designer had used a *ribbon* in his design, it did not prevent another from using a *lace*; and because fern-leaves had been used in one pattern, it could not equitably prevent another man from using moss. All this was, of course, quite beside the real question at issue. No designer would have quarrelled with a brother artist because, while he had employed ferns in his design, the other had had the temerity to enter also upon the domain of vegetable forms, and not only seize one of them, but even one of the cryptogamia. Nor would such a designer imagine, that because he used a twisted *ribbon* as a portion of his ornament, another man was precluded from the use of lace as a decorative feature. No artistic designer would for a moment put forth such an argument; but he would see what the Chancery Judge did not see, that if he used a combination of ribbons and ferns in a very particular way to produce an especial effect, no one had a right to reproduce that especial effect, and attempt to evade the consequences of piracy by changing the ribbon into a lace occupying precisely the same form and space in the design; and the fern-leaves into a group of moss presenting precisely the same general outline. These are points which could only be estimated in their true light and force by a jury composed half of manufacturers of the article in question and half of ornamental designers. Therefore, until cases coming under the Registration of Designs Act be brought before a fittingly constituted tribunal, no hope of a really intelligent protection of copyright in works of art can be indulged in.

The artist's copyright in sculpture, and in a picture, is much more simple. No artist wishes to prevent another artist from treating an historical subject because he has treated it himself; nor could he be allowed to do it even if so disposed. His individual treatment of the subject must form his protection. It is true there are subjects which seem almost the invention of the artist, and, therefore, deserve protection; as, for instance, Mr. Frith's "Railway Station," or Mr. Hunt's "Light of the World." But these subjects, in such hands, form their own protection; and an imitator would only expose himself to general ridicule in an attempt to copy their general effects. It is not, however, in the production of a single statue or picture that the value of the copyright lies, but in the right to multiply copies by means of casting, engraving, or lithography. It would seem that, in this case, no difficulty could arise. The value of the engraving would consist in its being an absolutely literal copy; and, therefore, only to be obtained by the consent of the possessor of the picture, who has no legal right to give his consent without that of the artist. Nevertheless, simple as the law appears on this point, a difficulty has arisen. Photography, as a means of producing a number of accurate copies of works of art, did not exist when the Act in question was framed; so that an artist has, at present, no certain redress for the reproduction of his works in that form; and even engravings may be copied in photography, by means of which absolute fac-similes can be obtained; and the publisher, who has invested perhaps 1,000*l.* in the engraving of the plate, has, in the present state of the law, no redress.

These facts, connected with the present state of the law concerning artistic copyrights, are only brought forward to show the difficulty of framing a form of legal protection which shall be effective, and which can be enforced before a fitly constituted tribunal. With regard to copyright in architectural design, however desirable the establishment of such copyright may be, it is evident from what has just been stated, that the difficulties must necessarily, in the present state of the art, be still greater than in the branches of art above referred to. For instance, an architect practising in the modern Gothic style, and having a new parish church to erect, may have made a tour in Cornwall, and have marked the grand lines and proportions of the tower of St. Probus, enriched with its broad and highly decorative string courses, as very adaptable to modern purposes; especially as containing a certain amount of Gothic novelty not yet worked out. He may, therefore, have made a design entirely based upon that of this noble tower. His work is, perhaps, much admired; and a builder in the next parish determines, without the aid of an architect, to send in a design for competition for a new church, his competition design being a literal copy of our architect's adaptation of the Probus tower. The architect in question naturally feels aggrieved that his clever adaptation should be thus, as he would say, "pirated." But the builder who had copied the design would not consider it a piracy. He would most likely have heard, through the clerk of the works, or some other channel, that the church and tower which he was accused of copying were themselves but copies,—copies of the tower and church of St. Probus, and he could claim an equal right to recopy them. This would not be an honest defence, as there would, doubtless, be much ingenious adaptation in the work of the architect which might be fairly considered original; and yet, as being but a modified (however cleverly modified) reproduction, it could scarcely claim the protection which ought to be obtainable for architectural design as well as any other class of design.

A case has just occurred, however, in a large provincial town, showing the want of a law to protect the architect of a fine stack of buildings, of very original character, from having his design literally copied in an extensive series of adjoining buildings without the payment of any kind of fee or royalty to the originator of the design. The case stands thus. The houses in a well-situated street having lost their prestige, from the widening of adjacent thoroughfares, and the erection in them of a superior class of buildings, of good design, had become comparatively valueless; one cause of the depreciation being the extreme narrowness of the street at the most important end. Our architect proposed to the owner of the houses on one side of the narrow end of the street to purchase some property lying at the back,—to pull down the houses which had become depreciated in value, and rebuild them further back; thus using part of the ground they had stood upon for the purpose of widening the street. The new houses were built upon a greatly enlarged scale as to height, and the design of the three or four fronts was made to form a connected façade of imposing aspect. The upper portion of the building was planned to let out in chambers, and the lower portion for spacious retail shops. The speculation, thanks to planning and the attractive style of the building, has been entirely successful. But the success does not appear destined to bring any additional benefit to the architect in the way of having to erect other buildings in the same style for the benefit of other owners of property in the street. It is true that his building has been admired for

the beauty of its design, and for its adaptation to its purpose. But, then, the model being made ready to hand, there is no longer any necessity to employ an architect at all. A spirited builder has, in fact, sent in a proposal and contract for rebuilding all the rest of the street after the precise design of the portion just described; and the architect—there being no such thing at present as architectural copyright—will have to stand passively by and see his morally legitimate property in his design absorbed by others, without the remotest prospect of obtaining any redress.

Seeing the present unprotected condition of the architect, it would seem, as we have before now urged, that some steps ought to be taken by the profession to establish some kind of copyright to such an extent as might be found just to the real originator of a new feature or new combination, and yet not such as would hamper freedom of design in others. It is but just that efficient protection should be given to legitimate originality, either in the application and use of material; or in the main structure or forms of façade or roof; or in the character or manner of distribution of the general system of ornamentation. The kind of protection here proposed seems, indeed, the direct road towards the more original treatment of architectural materials with regard to the purpose they are applied to, both structurally and decoratively. While our "classical" buildings are allowed to consist of so many yards of the Doric, Ionic, or Corinthian orders; and while our modern Gothic churches are but slightly varied reproductions of favourite Mediæval originals; how can a copyright be proposed? How are we to have a copyright in copies? Is the gentleman who first makes a servile copy of the façade of Chartres to be considered as having established the sole right of reproducing that model for so many years? or is the first who gives an adapted copy of the Antonine Column, as a national monument of some kind, to consider himself as possessing a vested right in the Antonine Column pattern?

Passing by such claims as these, however, the question may be fairly mooted as to whether a certain amount of ingeniousness in adaptation, if unmistakeably stamped with the impress of individual treatment, may not be considered as entitled to some kind of protection, though not to the same extent as should be accorded to works of a more entirely original character. If such a system were adopted, a great impetus would doubtless be given to efforts of a legitimate character in the direction of a generally fresher treatment of architectural design. Styles in art must grow: they are never the work of one man—nor of one generation.

DWELLINGS FOR THE INDUSTRIAL CLASSES, FINSBURY.

MR. ALDERMAN WATERLOW has built for 2,000*l.*, in Mark-street, Finsbury, for the industrial classes, a pile of "chambers" of middling quality and not agreeable forms, from which he expects to receive 9 per cent. for his money; and on Saturday last Lord Ebury, Lord Radstock, Mr. Samuel Morley, Mr. A. Kinnaird, M.P., Mr. Gregson, M.P., Mr. W. Hawes, Mr. Roberts, Mr. E. Chadwick, and many more, assembled on the roof of the building to express with somewhat overloud trumpets the debt the community owed to him. Stated thus barely the celebration seems ridiculous enough; and some who have laboured long years in making known the necessity that exists for healthful lodgings; in creating public opinion on the subject; and in devising and setting forth plans by which it was hoped these could be obtained, might think making 9 per cent. of their money an easier road to fame. In truth, however, if Alderman Waterlow has actually hit upon means by which healthful and convenient lodgings, in towns, where land is dear, can be provided for the struggling classes and made to pay a fair return for the money invested, he has done a good thing which deserves acknowledgment.

The frontage is 56 feet 3 inches; the depth of the main building, 27 feet 1 inch; with a back building projecting for each of the four "lettings," 11 feet by about 7 feet 6 inches. The balcony system for entrance is adopted, as in the Prince Consort's model cottage; and a flat roof, to be used for recreation by the children.

The two centre sections are set back about 3 feet from the line of frontage, for the purpose of giving space for the balcony of that width on each of the upper floors. Each section comprises one suite of rooms, to which access is obtained from the passages leading (on all the upper floors) direct from the balcony. The balconies are reached by a fireproof staircase, having a semi-elliptical form, the entrances to which are by two doorways in the centre of the building. This staircase is continued, and gives access, to the roof. The larger lettings, consisting of three rooms and a washhouse, occupy the end sections of the building. Leading out of the living-room is the washhouse or scullery, which contains water-cistern, sink, a small fireplace, washing-copper, dust-shoot, water-closet, &c.

The centre sections, comprising the smaller lettings, consist of two rooms and a washhouse. Close to the ceilings of the rooms a ventilator is placed, which communicates with air-shafts running through the centres of the chimney-stacks.

Considering the pile 50 feet in height, the cost would seem to be about 5d. per foot cube. The most is made of the area by planning the rooms without any reference to squareness, the result being apartments of very unpleasant shape.

The main cause of their cheapness is said to be the adoption of a concrete or artificial stone for lintels, arches, chimney-pieces, stairs, balconies, the floors of the wash-houses and passages, and the roof. The use of ordinary materials, the builder states, in the place of the artificial stone, "would have increased the cost of the building by *at least twenty-five per cent.* (?) and so rendered a good return on it impossible." The material is composed of clinkers, culm, hard broken coke, and similar rough porous calcined substances, in the proportion of four parts of these to one part of Portland cement. Sufficient water is added to these materials to bring the composition, when well mixed up, to the consistency of ordinary mortar. It is then placed in moulds or troughs, for the purpose of giving to it any desired form. In making the flat roof, it was applied in the following manner:—"Bars of 3-inch by ½-inch iron are stretched edgeways across the building, from front to back, at distances of 2 feet apart, and carried into the brickwork of the walls, so as to form ties, and bind the building into a solid mass. Half-inch iron rods, 2 feet apart from each other, pass through the iron bars already described; and beneath the network of iron thus formed a temporary layer of boards is placed, and then the patent material is filled in to a thickness of about 4 inches. In the course of a day or two the whole mass sets with sufficient hardness to allow of the removal of the boards; and after a week or ten days' exposure to the air it becomes so hard and firm that it will stand any amount of pressure."

Another reason given for the cheapness, if we understand rightly, is the non-employment of an "architect." Of course, it is unnecessary to remind the owner that in the erection of a structure of any kind there must be a director,—a "chief worker," whether called architector not; so that the question in commencing a building is, not whether there shall or shall not be an architect, but whether there shall be a cultivated and instructed chief worker, or an uncultivated one,—a professed architect, so called, and paid for his services, or an amateur acting under no name, and gratuitously. From which of these the most satisfactory and really cheapest building might with the greater certainty be looked for, we leave the reader to decide. A successful venture, it is claimed, is sometimes made by the merely practical man, which a Professor would shrink from. No doubt of it: but, in the long run, the course would not pay. We can believe that an architect with a reputation to lose might have hesitated before constructing a roof as this is described as being constructed if aware that it would be used as a meeting-place for sixty or seventy gentlemen round a table. However, it appeared to stand the test perfectly well; and, if it continue to be water-tight, will afford good evidence, amongst other things, of the goodness of the foundation.

The rents expected are,—Four families at 7s. per week; six families at 6s. 6d. per week; four families at 5s. 6d. per week; and six families at 5s. per week,—rather high after all, as it seems to us, considering the insufficient accommodation offered for a family even in the dearest lettings. We shall look anxiously to the condition of the houses a couple of years hence; and meanwhile, with a modification of the trumpet-blowing, add our acknowledgment of the importance of the object the owner has in view, and the excellence of his intentions.

NORTHUMBRIAN PELES.

ON the Border, between England and Scotland, are found, scattered over the country in great numbers, square towers, which, to a casual observer, are as enigmatical in their character as the round towers, or *lanternes des morts*, of Ireland. On knolls rising out of valleys, on rocks cropping out of hill-tops, in villages, near churches, and in towns, these curiosities of Mediæval military architecture may in turns be found. Their grey stones are patched with brown and amber lichens, and are marked with green and black weather-stains. Some are isolated; others adjoin more modern fabrics, as we shall show. No comprehensive survey of them has been made. We step in, as pioneers, to pick out this new path in archæology.

The subject is of national interest. The *lais* of troubadours and chronicles of the monks are interwoven with the bright hues of fancy and embroidered with beads of legendary lore, and might appertain to any land; but the rugged, storm-beaten masonry which centuries have not been able to uproot, can belong to no people but our own. In the same way a jewelled chalice may have been imported in old times, or wrought and chased by one of our own craftsmen: there can be no certainty on the subject; but concerning our ancient castles, pele-towers, bassle-houses, town-gateways and burgages, our ancient churches, and other ecclesiastical edifices, there can be no doubt. They were upreared by the skill, industry, valour, and reverence of our ancestors. Ecclesiastics of rank and barons of "high degree" did their share in bearing the costs of these grand old works, and they may have occasionally employed a foreign artist, as in the case of William de Sens, at Canterbury; but the hands that wrought so skilfully, the shoulders that bore the heavy burdens to and fro, the figures that so deftly placed the head corner-stones, were those of the honest English workers of yore,—forefathers of the honest English workers of to-day. On the Border especially we may read history in stones. Who could pass fifty castles, encompassed about with walls, in their turn defended by towers, and the towers subdefended with turrets,—upwards of a hundred peles, and perhaps half as many bassle-houses, all within the limits of a county,—without realizing that he was journeying in a part of the kingdom that had been the scene of continuous conflicts? There are, unfortunately for posterity, many military and feudal edifices on the Border whose remains are gradually disappearing. Year by year they become less and less. This is brought about as much by mischief as by abandonment. The diminishing remains of Dunstanborough, Edlingham, Norham, Etal, Mitford, and Tynemouth castles, are cases in point. Berwick Castle has disappeared to make place for a railway station. The site of Wark Castle is shown only by a mound. It is so, too, with peles: many are in decay. The pele of Heslayside was ruthlessly pulled down during the minority of the late owner. The remains of Bewick Pele have been removed within remembrance.

Early mention of the term pele (*pela*) was made by King Henry IV., in granting the citadel or castle, in the Isle of Man, to Sir John Stanley. It signifies a pile or mass of building, and is used as a distinctive appellation of fortified buildings of less consequence and extent than castles. A previous mention of the same term, but used as a compound, was made, in 1386, by Edward, Duke of York, when he granted Stawarde-le-peel, in the Vale of Allen, to the Friars Eremites of Hexham, in consideration of the nominal rent of five marks. Northumbrian peles are strong, stone, quadrangular towers, of various dimensions, containing sometimes two, sometimes three, chamber-floors, one above the other, covered with a flat roof, which is fortified with embrasured parapets. The period of their erection appears to have extended over three centuries, the earliest examples being Edwardian. In many instances, in fourteenth and fifteenth century peles, there are projecting parapets resting on corbels. At the angles of some of them are turreted machicolations, supported on corbels trebly and polygonally notched. There are also instances in which the towers are ornamented with panels, sculptured with heraldic bas-relievos—the arms of the owner,—and others in which the window openings are cusped, but the rule is severity of treatment. The lower chambers are groined—in several examples, barrel-groined. With the exception of the entrance on the ground-floor, there

are no openings below the height of a man larger than *crenaux*. The entrance was defended by a portcullis. The dimensions of the plans differ materially. Halton tower measures 33 feet by 22½ feet: Shilbotell measures 22 feet by 18 feet: many are much larger. No two peles are alike in details; the district in which they are situated, the actual site they occupy, the period in which they were erected having exerted their varying influences; but the leading generalities are those mentioned.

It is a remarkable circumstance that several of these peles belonged to neighbouring monasteries: thus the tower at Whittle was the property of the Prior of Tynmouth, who also owned the castle of Tynmouth, and a tower on Coquet Island. Rytton Tower belonged to Newminster monastery, as did the two bassle-houses at Felton and Carrecoates. A pele at Hexham belonged to the Archbishop of York, and the Prior of Hexham built a pele with a stone house adjoining it at Carrow. The Bishops of Durham owned Norham Castle and Shoreswold pele, geographically, in Northumberland. And the hospital of Kepeyeare owned "a lytle tewre," at Tweedmouth. There is reason to believe that these were all in military occupation, or held ready for occupation upon any surprise. There are also fourteen peles, which have been from time immemorial the residences of the vicars of the respective parishes in which they were situated. Additions have been made to them; sometimes a wing added; sometimes a house built adjoining, with communications made from one to another; sometimes a story added; in other instances the upper story, being, perhaps, in decay when the additions were making, has been replaced by a modern superstructure. There is a pele incorporated at Chatton vicarage; another in Alnham vicarage; others in the vicarage houses of Shilbotell, Ponteland, Embleton, Whitton, near Rothbury, Elsdon, and Ford. Whittingham pele is used as a school. Corbridge pele stands in the churchyard. There were, too, "lytle towers" at Ingram, Stanwardham, Symondburn, Kirk Whelpington, and Aldwinton, all of which were the "mansions of the vicaredges." It takes an experienced eye to detect some of these peles. That at Ponteland could not have been more ill-used by the Scots than it has been in our own day. The ancient window openings have been all blocked up, and large modern sashes inserted to correspond with the regular order of those in the new portions of the vicarage, and one vast coat of plaster and shingle daubed over all its antiquity. Shilbotell vicarage looks, externally, like two small stone houses thrown into one, with a red tile roof divided between them; but enter it, and it will be perceived that the ground chamber of the house adjoining the church-yard is barrel-groined and lighted by a splayed loophole through walls 4 feet thick. The upper chamber has been more modernised; but from its windows can be seen the sweep of sea and country that Ducis de Bedford and his retainers saw from it when in their occupation, *circa* 1460. Embleton tower has been patched and repaired, and made to suit the requirements of the day without regard to its associations. And Alnham pele has been enlarged into a mock castellated vicarage.

Other peles have been incorporated in the residences of the county families, several of which are called castles in virtue of this conservation. Chipchase Castle is a noteable instance. This, when in the occupation of Alexander Heroun, in the fifteenth century, was known only as "Turris de Chepchasse." Haggarstone Castle, at the same date, was "Turris de Hagarston;" and Featherstone Castle, in 1542, was a "towre at Featherstonhaugh." Craister tower stands at an angle of a large modern mansion occupied by the representatives of the original owner of "Turris de Craister." Cockle-park tower, with additions made in Stuart times, and alterations in Georgian times, is used as a farm-house. Crawley pele occupies a site successively chosen by the ancient British and Romans as an encampment on an eminence whence the vale of Whittingham can be scoured by the eye. This is a large tower. A farm-house, with the roof on it, is formed inside it on the ground floor, the chimneys of which rise up among the jagged edges of the tall ruin, and farm buildings and piggeries hem it in on all sides. Farm buildings are built up against the decaying pele at Kyloe. The market-place at Hexham has a pele; and a pele stands in the market-place at Corbridge. There is an Edwardian pele at Ancroft, in a most curious position. It is built over the west end of a small Norman church. The Norman walling, pierced with its Norman doorway, remains up to the height of the corbel tabling, and upon this the low, square, sturdy tower, with walls 4 feet thick, has been planted and treated in every way as an ordinary pele—save its remarkable site.

Heaforlawe pele is a notable specimen of an isolated pele. It stands on high ground about three miles north-west of Alnwick, as grim and sturdy, as passively defiant, as a prickly gorse-bush on a patch of moorland. Not a tree, scarcely a hedge, obstructs the sweeping view it commands on all sides. It would be difficult for a hare to escape observation, and impossible for the boldest Scot. From its summit could be seen and signalized Dunstanborough Castle, Bamborough Castle, Holy Island Castle, Embleton Pele, and Coquet Island Tower. Eastwards the country slopes downwards to the sea; northwards and westwards, some ten miles in the distance, uprise the Cheviot Hills and brown moorlands, some 100,000 acres of which yet resist cultivation; and between the pele and the windings of the river Alne, before it flows past Alnwick Castle, lie the remains of Hulme and Alnwick abbeys. A green and brown and black and purple country, with clusters of dark fir trees here and there, and low sandstone fences edging the roads, with hares or rabbits darting past, moor-birds on the wing, and the air ever vibrating with the distant melancholy cooing of wood-pigeons. The tower is roofless, but not ruined. It had three stories; but the third story no longer retains its full height; and grass and weeds are growing in the chinks on the wall-tops. There is no opening on the ground-floor, save the doorway. On two sides of this tower there are small panels which contain a sculptured representation of the badge of one of the ancient Percies who was abbot of Alnwick Abbey—thus indicating that this pele was also church property. On the east side, close to one of the panels mentioned, is a cusped-headed niche. The window-openings are few and small—single and double lights irregularly placed.

The pele, now forming part of Chipchase Castle, has preserved its portcullis and the machinery with which it was raised; and is in many respects a most interesting example.

In examining these ancient fortlets the question that arises is, do they form one continuous system of defence, in which priest and knight must have alike joined,—one continuous network of towers from the tops of which the whole Border country laid under observation, and signals could be made by beacon, or otherwise, from one to another, announcing danger and demanding assistance, or are they simply the fortified residences of the gentry of the country, built in an age when every man's house may have been, literally, his castle?

If an Englishman sowed an acre of the "batable" land on the extreme border the Scots would lay it waste; and if a Scot so ploughed and sowed a field in the same contested ground, his industry was immediately cast to the winds by the English. The fierce character that these and similar destructive forays gave to the Borderers required centuries to subdue. Every able-bodied man had to give his services in pursuing the enemy whenever called upon to do so, and a habit of pursuit and reprisal became a second nature. And if the Border legends concerning fair Maiden Lilliard and the lady who, in derision, wiped with her handkerchief a part of her castle-wall that had just been struck by a stone thrown from an engine of the besiegers, be true, their help-mates were as brave and scornful as they were themselves. From joining together in self-defence, an easy transition was made to aggression, and the honest men left on the border lived in equal fear of Scot and moss-trooper. Special legislation was resorted to to meet these delinquencies. Henry V. singled out the "felons" of Tyndale and Hexhamshire for especial severities, and before his death included the "murderers and offenders" of Reedsdale in the same penalties. The social peculiarity of the Northumbrians appears to have been that instead of becoming more and more orderly and well behaved, like the natives of the southern counties, they became less and less so. Outlawry and forfeiture had no terrors for them. Their hearts and hands were too imbrued with deadly feuds, too familiar with deadly retaliations, their ears and eyes too expectant of pursuit with hue and cry, bugle and bloodhound, and a lighted piece of turf carried on a spear, hot-trod, to care for the mild threats of the law. And again these knots and companies of men, well mounted and strong and lithe of limb, had in reality but little to fear; for, although ostensibly frowned upon by the legislature, they were made use of by the ruling powers as weapons against the Scots. The Earl of Northumberland wrote to Henry VIII., ten years after the battle of Flodden, that he meant "to lett slippe secretlie them of Tindaill and Riddisdaill for th'annoyance of Scotlande.—God sende them all goode spede!" With this secret encouragement their enormities were unabated by the accession of Queen Elizabeth. They frequently took people prisoners, and detained them till they were ransomed, and were constantly carrying away cattle, setting fire to barns and corn-stacks. They took the town of Haltwhistle twice, and carried away a great many persons and their goods. Elizabeth endeavoured to keep them within bounds by an enactment which set forth that "whoever shall, without lawful warrant, take any of her Majesty's subjects against their will, and carry them out of the counties of Cumberland, Northumberland, Westmoreland, and Durham, or to any other place within the said counties, or detain and imprison them against their wills, to ransom them or to make a prey or spoil of their persons and goods upon deadly feud, or otherwise; or whoever shall be privy or assisting unto any such taking, or whoever shall take or carry to the use of himself, or wittingly to the use of any other, any money, corn, cattle, or other consideration, called *black mail*, for the protecting of them or their lands or goods from such thefts and robberies; or whosoever shall give any such black mail, or shall wilfully and of malice burn or cause to be burned, or aid or consent to the burning any barn or stack of corn within the said counties, shall be adjudged felons." The names of outlaws were to be proclaimed by sheriffs in their county courts and chief towns once a month till they gave themselves up. The mayor, bailiffs, aldermen, and other chief officers were to proclaim them at every fair, and once in every six weeks at their markets. And if any one relieved, entertained, or conferred with any of these outlawed persons, he was to be imprisoned for six months, and bound in two securities for his good behaviour for one year after. Elizabethan severities were of no avail; for Charles II. found the Borderers in need of further special enactments; and George II. thought it expedient to confirm the Acts of Charles. This evasion of the law, through the reigns of so many monarchs, gives us insight into the need there was of strong places of defence in every district.

There is one fifteenth century MS. and one sixteenth century MS. extant relating to Northumbrian peles. The first-mentioned was in the possession of Mr. Robert Surtees, F.S.A., of Mainsforth, and the latter among the Cotton MS. in the British Museum, when the Rev. John Hodgson compiled his "History of Northumberland." They were transcribed for him that he might weave their contents into his work; but he ultimately decided upon printing them in their integrity.

The Surtees MS. is simply a list of the names of all the castles and towers in Northumberland, with the names of their proprietors. There are thirty-seven castles enumerated. The peles, seventy-eight in number, are called *fortaliciorum* in the heading, and then indicated one by one, as Turris de Thropton, Turris de Ottirbourne, Turris de Nesbette in Glendale, &c.

The sixteenth century MS. is fuller in its information. It bears date 1542. It is a report of an inquiry into the condition of the frontier and its defences, by Sir Robert Bowes and Sir Rauph Elliker. It is curious to note that whenever they and their party came to a "lyttle parcell of grounde plowed by the Scots with the corne growynge thereupon," they painfully destroyed the same. They appear to have traversed the boundary line of the two kingdoms before they examined the defences. This is but indefinitely marked in some parts of its length; in one place by a dyke only, which the Scots were continually defacing, filling in and ploughing over; in others by a boundary stone, a watercourse, a hill, a hanging stone, a mountain, a brook, &c. The Tweed was less "batable." After describing these features and the places in which the Scots had crossed the border and ploughed the land, and the manner in which he and Sir Ralph had left everything waste, Sir Robert proceeds to enumerate so many of the frontier defences as are on their route, and to mention briefly whether they are in good reparation or not; whether they possess a barmekyn or protection for cattle, and, when they did not belong to the "king's majestie's inheritance," the names of their owners. This "viewe" relates to the east and middle marches only, but it tells of as many as 108 fortlets. In all fairness to the prowess of the Scots, we must admit that Sir Robert found very many of them "oute of reparacions," "defaced in the wars," "in extreme ruin," and "caste downe." Sir Robert was not so magnanimous: he traces the decay of so many of the peles to the fact that "the owners thereof for their more easye

quyetness and savynge of expences did withdrawe themselfes in fermes or other smaller houses within the countreye further distant from the said borders to the great decay of the same. And also not regardinge their said uttermost fortresses or houses at the fyrste made for defence and strengtheninge of the said borders for lacke of necessary contynual rep'acons have suffered them by lyttle and lyttle to fall in extreme ruin and decay." By virtue of his commission Sir Robert sent a letter to every such owner, complaining of their negligence, and of many of them suffering their decaying fortresses to be used and inhabited by herds and hinds, many of whom were "Scottes borne," and desiring that without further loss of time they would cause the said tower, with its fortifications, to be put in able and sufficient repair; and that either the owner or some other "apte and able person" was to inhabit it, by whom the tenants and other inhabitants of the neighbourhood might be led forth "to fraye and followinge for the defence and savegarde of the said borders and m'ches against the incourses of Scottes and theves as ofte as nede shall requyre. Fail ye not hereof as ye will avoyde the King's ma^tie^s most dredful dyspleasure and at y^r further p'yll. And thus hertely farewell."

Nearly thirty years had elapsed since "the flowers of the forest were a'wed away" at Flodden; and fresh rumours of war were afloat. Sir Robert, as well as urging the rebuilding of the various fortresses, proclaims the necessity of providing every tower with a barmekyn to protect the cattle. In his estimate of the cost of rebuilding some of them, he quotes 200 marks as the price of a barmekyn; and a hundred pounds as the price of a tower, provided always that the king's majesty orders the timbers to be cut in the lengths required at Holy Island and Tweedmouth, so as to spare as much carriage as possible as "the beastes be so small and weake in these parties." He further intimates that the able-bodied men of the district should be apportioned off in such a manner that about forty of them should be ready to defend each tower. Sir Robert's observations lead up to the inference that these towers had a systematic connexion with one another, although the inheritance of private individuals; for, in urging the rebuilding of two peles out of reparations he says, "No Scot could pass but one of those houses might discover them. And so by burning of beacons or shote of a gun to give knowledge and warning from one to another, whereby they might assemble to resist, repulse, and annoye the enemy as occasion might serve them."

The terms pele and pile are applied to the same building in this Tudor document. Thus, in the text, Sir Robert says, "At a place called the Hare Clewgh one Rog' hangingeshawes hath lately buylded upon his owne inherytaunce a strong pele house of stone in a convenient place for resystence of the incourse of theves of Ryddesdale, and he ys not able in defaulte of substance to p'forme and fiynshe the same;" and in the compressed marginal reference, says, "Hare Clewgh, a stone pile not finished." Again, "At the Sawnes is a lytle pele house or castell of the inherytaunce of the said Sir John Fenwyke in measurable good rep'ac'ons only," which is called in the margin "a little pile;" and "at Elybourne p'cell of the lordshippe of Rotheberry is a strong pele house of the kinges ma^tie^s inherytaunce as of thaugmentac'ons of his graces crowne and p'cell of the late erle of Northumberlandes landes," which is called in the margin "a strong pile."

We have been at some pains to furnish a list of the places which possessed peles in the Middle Ages in Northumberland. There are but few of them that have altogether disappeared — the thickness of the walls and the excellence of the workmanship resisting the obliterative tendency of alterations as well as the effects of the elements. They will be found fringing the rivers and skirting the coast, and thick in central Northumberland, from north to south, where, if once safely across the Tweed or the Cheviots, the Scots might have, otherwise, made rapid advances upon English ground. The sites are arranged alphabetically, rather than geographically, for the convenience of reference:—Adderstone, Alnham (2), Alleynton, Blenkinsoppe, Brankestone, Barmoor, Bewick, Belsay, Beufront, Bambrough, Biddlestone, Burroden, Barrow, Babington, Berrington, Bukton, Carrow, Carran, Cheswick, Chatton (2), Crawley, Cockley, Callalye, Cartington, Corbridge, Chipchase, Cornhill, Craister, Coquet Island, Duddo, Denton, Downeham, Embleton, Elsdon, East Newton, Eslington, Elibourne, Elwick, Featherstonehaugh, Fowberry, Ford, Fenton, Fenwyke, Flotwayton, Goodrich, Great Ryle, Great Tosson, Gunnerton, Haltwhistle, Howtell, Haggarstone, Horton, Holborne, Hesleyside, Hepburne, Hepbell, Hareclough, Harehambale, Hoppale, Hethepool, Heselrigge, Hexham (2), Halton, Ilderton, Ingram, Kirkwhelpington, Kyloe, Kirklaw, Little Harle, Little Swinburne, Langton, Lowick, Lilbourne (2), Linnebrigg, Lemerton, Mickle Swinbourne, Meldon, Middleton (2), Newbrough, Nesbitt, Newtown in Glendale, Newtown near Edlingham, North Middelton, Newstead, Otterbourne, Pawston, Preston, Ponteland, Rotheley, Roddam, Stanwardham, Shilbotell, Symondburne (2), Sewingshelles, Satlingstones, Scrimmerstone, Shoreswold, Shawden, Sawnes, Staward-le-peel, Scranton, Shortflatte, Seaton Delaval, Sighale, Thirlwall, Tilmouth, Tweedmouth (2), Thornby, Tharnam, Trewhit, Thropton, Trowhen, Whitton, Wawtoun, Willimoteswick, Wooler, Wetewood, Whittingham (2), Whittle near Tynmouth, Wallington, Westherle, Werk in Tyndale, Widdrington, Whitfields, Witteslade.

The Northumbrian bassle-houses, occasionally mentioned, should be also numbered among the curiosities of architecture. There is a fine and apparently little-known example at Doddrington, within ten miles of the Cheviot. It is a large, plain, strong stone house, built on a parallelogramical plan, three stories high. It is used as a store-house. The southern elevation is probably untouched. There are no window-openings on the ground-floor; and this portion of the edifice is strengthened by enormous buttresses. Immediately under the parapet there is a wrought stone bearing this inscription:—

T. C. MILES
HUJUS STRUC
TURE SUPTUM
FECIT. A.D. 1584.

Sir Robert Bowes mentions "bassle-houses" at Hatherton, Hawicke, Swetehope, Felton, Carrecoates, Hallbarnes, Symondburn, Aykeld, Newbriggen, Green Leighton, Tekett, Bradley, Bellister, and a "strong stone house in Tyndale—Tarset Hall." The latter was burnt by the Tyndale men in Tudor times, and its stalwart ruins, covering nearly an acre of ground, and ashlar walls 4 feet thick, impressed the inhabitants of the scattered houses in the deep and narrow glen, formed by the lofty hills in the surrounding mountainous district, with the belief that it must have been the habitation of a dreaded giant. As with pele and pile, the terms "bastell-howse" and "castell-house" are used alternately in reference to the same building. They are the latest of Mediæval fortlets.

Our "viewe" of Northumbrian fortifications would not be complete without passing reference to the large number of castles the country possesses; although those edifices do not come within the compass of the present writing. They are too vast, too varied, too important to be treated summarily. Their number, however, and situation may be dwelt upon in contrast with those of the peles. There were castles built at Alnwick, Berwick, Heton, Warke, Norham, Etal, Ford, Chillingham, Harbottle, Haughton, Langley, Lambley, Bamborough, Dunstanborough, Warkworth, Tynmouth, Newcastle, Prudhoe, Ogle, Morpeth, Mitford, Eshett, Twisell, Edlingham, Aydon, Thirlwall, Horton-in-Glendale, Roxburgh, Bothal, Belforth, Dichante, Showdon, Capheaton, &c. &c.

Thus is Northumberland inlaid with strong towers. Looking at them, and thinking of the service they have done, of those they have defended, and of those who have defended them, the heart-beatings of those who first saw the distant signal-beacons, the rapid kindling of others, the heaping-on of dried whins and woods, the breathless coming to and fro of messengers, the hurried entrance of women and children, the driving in of cattle to the barmekyns, the brave sallies of armed men, we would that every stone was spared. Grey with age, as they may well be with memories, they are radiant with the associations as with the lichens with which Time has sealed them. They give to a district the choicest interest. And yet many of them are abandoned to cattle and jackdaws; others are so metamorphosed as to lose their identity; and in occasional instances, as at Hesleyside and Bewick, some are quite obliterated. The wisest of men wrote,—"Remove not the ancient land-mark which thy fathers have set," and the lapse of thousands of years has not lessened the value of the aphorism—it is yet "more precious than rubies."

THE MARBLE STATUE OF LORD LYONS IN ST. PAUL'S CATHEDRAL.—Mr. Noble, it appears, has received in payment the sum subscribed for the Lyons Memorial, which amounted to 1,114*l.* 15s. 7d.

PRINCIPLES OF DESIGN IN ARCHITECTURE.*

THE system in dating books, and in the publication of fresh editions, needs amendment. Changes are now so rapid in the light received by any subject, that it is necessary to know more about the time of promulgation of the facts and opinions than is comprised in a date that applies to an entire period of twelve months. As to the practice of affixing to books published at the end of a year, the date of the year following, it is simply a very stupid practice, which we have known to operate to the deprivation of the credit of prior publication of statements, and to the gain of the credit by a book published at a date later than the actual publication of the first. We have, however, now to concern ourselves only with the course which should be taken, for the convenience of inquirers, and in justice to authors as well as purchasers of books, in the case of new editions; and we cannot notice all the points connected with such publication even, except by saying that our literary contemporaries are strangely indifferent to the whole subject. But we have to say, that where, as in the case of the book now before us, there is no information given of the date of publication of the first edition, and no indication of the author's sanction of the opinions as his in 1863, inconvenience, to say the least, to all parties results. It is not always indeed that second thoughts are best; and we are not sure that we should accept what Mr. Garbett would say now, as better than what he wrote in the first edition of his "Principles of Design," which was published somewhere about the year 1850. What is the duty of those who have obtained copyrights, however, is plain; and a couple of lines of prefatory advertisement to the new edition, would answer the purpose; whilst authors desiring to supplement and complete their statements, or modify opinions, would stipulate for the right over second and later editions; although we must add, that nothing but the progress of time, and the fact that the new information would not have come to the author without the first publication, can excuse incompleteness of the original work.

The publication of Mr. Garbett's work as one of Weale's Rudimentary Treatises, occasioned something like a sensation in the small *coterie* which is the architectural literary world; and we hope that the present republication may be accepted as evidence that the book has been extensively read, outside the profession. We have taken the opportunity to go through its pages a second time, and with advantage. There are crotchets in it, as there might be found in any other of the books that have characterized the last twenty years of writing on the class of subjects; but we know no work that we would sooner recommend to an attentive reader desirous to obtain clear views of the nature of architectural art. Mr. Garbett came after the appearance of Mr. Fergusson, Mr. Ruskin, and Mr. Hay, in their earlier works; and he derived advantage from them no less than from Burke, Reynolds, Price, and Alison, even where he differed in conclusions.

In the scheme of subject-matter, the first chapter of the work was devoted to the question, "What is architecture, and what are the objects at which it aims?" In three succeeding chapters of Part 1, the author endeavoured to deduce from the works of nature, and from consideration of the "objects" referred to, "some rules and principles which might be expected to conduce to their attainment," as well as to show that those principles had "actually presided in the most successful productions of the art." In the second part, he examined "the two architectural systems, by general consent called *pure* and *complete* styles," to show "that their purity consisted in the observance of these principles" and to elicit other principles peculiar to each; and he concluded with some remarks on the state and prospects of our art.

The objects of *architecture proper*, that is architecture comprising whatever perfections a building may possess besides convenience and stability, he regarded as fourfold; or, *first*, the exhibition of a courtesy due from every one who builds, to humanity, on whose ground and in whose sight he builds; *secondly*, a further refinement into positive beauty; *thirdly*, expression, the conveyance of definite emotions to the mind, suited to the character of the work, though not descriptive

* "Rudimentary Treatise on the Principles of Design in Architecture, as deducible from Nature and exemplified in the Works of the Greek and Gothic Architects," by Edward Lacy Garbett, Architect. Second Edition. 12mo. pp. viii. and 241; cuts. London: Virtue, Brothers, & Co., 1863.

of its uses to the extent sometimes asserted as within the province of architecture; and, *lastly*, poetry in building, or the means not only of affecting, but of exalting or improving. He said :—

"The architecture which attains only the first of these objects is no more than a *polite* art; when it reaches the second, it becomes an *ornamental* art; by attaining the third (and not otherwise) it gains a title to be considered a *fine*, that is an *expressive* art; in those very few of its productions in which the last purpose has been accomplished, does it deserve to be called a *high*, a *poetic* art. As the first, its aim is to *conciliate*; as the second, to *please*; as the third, to *touch*; and as the last, to TEACH."

One of the author's main points was the demonstration of the existence of a class of beauty between the "mere æsthetic" without expression, on the one hand, and the phonetic on the other, and of the similarity of architecture and music (instrumental) as arts. To both these arts he allowed the power of expression, but not of *meaning*, properly so called; for,—"an overture without words can express nothing more than a building without phonetic sculpture or painting." Music, he said, acts more strongly on us than architecture, but then it addresses us through a sense which is completely at its mercy. Expression *acquired*, however, must not be mistaken for that which is *natural* and permanently true. As an instance of what is merely local prejudice, the idea of a *club-house style*, which grew by a singular force of association from the erection of two buildings in Pall-mall, was alluded to. The great utility of travel to the architect, our author wrote, "is not to show him much of the world, but to teach him how little of it he has seen." If you want to distinguish between the destinations of buildings such as mansions and club-houses, he said, the best way is by writing up their names.

The beauties of building which are of the lowest class in the author's division, are colour,—which the love of it by children and savages shows to be a matter of sense;—repetition and uniformity, beauty of form apart from expression, beauty of curvature, unity with variety, and gradation and contrast, that is to say, without reference to destinations or to the beauties of expression, definite character, or fitness. They are the beauties to which Mr. Fergusson gave the term æsthetic, restrictedly, or sensuous. In strictness, Mr. Garbett said, these beauties would include only those of colour, those of mere form being always addressed to the mind, though making no attempt at definite expression or emotion, and so not entitling the art in which they are found to the appellation of a Fine Art. Afterwards comes the consideration of different kinds of expression, as the gentle or delicate sort of beauty, and sublimity,—results from the opposite effects of contrast and gradation,—contrast being calculated to *excite*, and gradation to *soothe*; and forms were divided according to the degrees of contrast or gradation, into five classes. The chapter treating of "some higher attributes in architecture" showed the difference between copying natural objects, and imitating nature, or in the latter case generalization; it showed also very clearly the difference between decoration and picture, distinction which we believe had been shown in these pages previously, and at a time when it was far from being understood. He next came to speak of Constructive Truth and Constructive Unity, as indispensable in any attempt to rival or even understand the Greek and the Gothic systems, but attached perhaps too much importance to the vaulted ceiling in the latter, when he said that applied to a building not so ceiled, the style must be useless and meaningless. Taking a hint from a portion of the late Alfred Bartholomew's "Specifications of Practical Architecture," he found that there were three styles of construction, which were mixed indiscriminately in every modern building, whilst it had been the peculiar merit of the Greek and the Gothic systems to exhibit only one of the modes of construction, each thereby possessing constructive unity. He saw in the Greek system, the architecture of cross-strain and vertical pressure, and in the Gothic, and arcuated systems generally, the architecture of compression, and oblique direction of forces; whilst he looked forward to an architecture of tensile strain, comprising the various kinds of truss, as "the destined architecture of the future." These speculations are the least satisfactory portion of the book; and it is worthy of note that instead of progression during the last ten years in the direction speculated upon, predominant use has been made of the girder system or that of cross-strain, as exhibited not merely in railway bridges, but in roofs such as the roof of Covent Garden Theatre. Still, the second part of Mr. Garbett's work was not less interesting than the first. The contrasted sketches of the arrangement of the roof, gutter, and wall, in a modern English building, and in a Greek; of the cathedrals of Salisbury and Amiens, with particulars; and of different sorts of vaulting; and his restorations of the Mausoleum, and the tomb of Porsenna, are useful features in the work; whilst the general examination of the Greek architecture and the Gothic, is of some value. Portions of the concluding remarks and of the section on Post-Gothic Architecture, seemed in the first edition needlessly discouraging, and that is still more the impression produced now. There is a greater resemblance between in some cases the very words of Mr. Garbett and Mr. Fergusson, than the latter was probably aware of when he last wrote. The former thinks, or thought, that the age of *styles* ceased with the great change, the invention of printing, and that then the age of *individual artists* commenced, that "there will never again be a period of pure taste," that art is now for the many and of the many, who are "vulgar, gross-minded and thought-sparing," and that we become more and more degraded; yet he accurately perceives that architecture is a part of the nature of man—a thing which must be had, good or vile; although he believes that "fickleness, low cunning, hollow affectation, simulation, servility, and thought-flying hurry," are characteristic of the *many*, in every nation; and that "we are as yet the only nation that have a style of the many." He appealed to all who had ever returned to our shores after a long absence, as to the effect upon them of our architecture, and certainly did not overstate the case as to the disgust therewith. But he did not discover the entire reasons of this, some of which have to do with the smoke-nuisance. The architecture of the few, thinking and truth-seeking, he continued, is hidden by the mass; and the danger is that this will be falsified by the general corruption. To obviate such a result "*is now the office of true architecture.* The general taste can never improve. Pure taste can never again prevail; but it can *fight*." It need never be extinct, but it can exist, he said, only by fighting every inch. Its "glorious destiny" was "to wage a perpetual war against falsehood," &c. Those enlisting on the side of Truth, in this conflict, must bear in mind, said Mr. Garbett, that there is no substitute for thought, and that nothing can increase the value of a design which does not increase the labour of the designer; and also in mind, points (those we have ourselves taken pains to set forth) regarding novelty and precedent. On the question of a new style, the author concluded that the requirement to invent one for ordinary buildings was preposterous. No inventive architect would wish for a new style; though "in another point of view, one is indispensable." He spoke of a class of buildings, without designating it however, as approaching a new style of construction in the use of *tensile* covering: in such style the treatment would be of necessity new. A new *principle of unity* would have to be kept in view, and of the three such principles of constructive statics,—the depressile, the compressile, and the tensile methods,—the beam, the arch, the truss,—the third, he said, was ours to be used as the others have been.

There is much in all this, written some thirteen years ago, to justify our view first expressed, that it should have come to us with either the author's *imprimatur* or his latest corrections and additions. Still as we said, the book is as it was, a valuable one; and we would chiefly claim for it, as would its author, that it should be read intelligently.

THE HOLIDAY DECORATIONS AND REJOICINGS.

SUCH a holiday time as not only London but the whole country has just had can only happen once in a generation, if even so often. The display at the close of the Crimean war was as nothing to it. The newspapers which we receive weekly from all parts of the country were last week of themselves a curiosity, such as many years' experience in journalism has never till now presented. Each and all, supplements inclusive, were literally stuffed full of reports from town, village, and hamlet, as to the grand proceedings of the 10th instant in the respective localities; besides lengthened details of the reception of the Princess and the Prince in London, and their marriage at Windsor. As for the illuminations throughout, from the Land's End to John O'Groat's House, the star-gazers resident on our planetary neighbour Mars, if any such there be, may literally have witnessed the grand flare-up, through their telescopes, if they have any; and perhaps may have been in hopes of it ending in the interesting phenomenon of a whole planet on fire.

Any general account of the decorations, either in town or country, besides what we have already given, is out of the question; but, as an example or two may indicate what was everywhere going on, we may just note briefly that,—

At *Bristol*, there was hard work for all from morning till night in celebrating the marriage of the interesting couple, with review, banquet, ball, decoration, and illumination; and the poor were not forgotten here nor elsewhere: about 4,000 children were treated to the Zoological Gardens, where they sang the National Anthem; and, as they left the gate, that good soul, Alderman Proctor, gave every one of them two bran new penny-pieces, to go their ways with (to the confectioner's) rejoicing.

At *Brighton*, besides the whole day's proceedings, and the illuminations at night, there were fireworks, boats on fire at sea (rather an odd form of rejoicing, by the way), and a grand torch-light procession. As to which, a reporter says,—

"Amidst innumerable torches with very beautiful coloured lights, at intervals marched a heterogeneous concourse of fancifully and fantastically-dressed persons, under the guidance of about twenty captains, each of whom was distinguished by bearing a lantern for lighting torches. Early in the procession came a body of fifty members of the United Ancient Order of Druids, in long flowing gowns, belted round the waist, with the cowls drawn over their heads, and having their faces ornamented with the Druidical grey beards (this being their first public appearance in Brighton); forcibly reminding the spectator of Lorrequer's 'Monks of the Screw.' The railway men were interspersed with the line; and, with their red Garibaldi shirts and white trousers, greatly enhanced the picturesque spectacle. Altogether, the ruddy glow of the torches, fanciful dresses, regalia of members of different societies, inspiriting music, vociferous cheers, and immense concourse of followers and spectators, combined to form one of the most striking effects of the day, and one that will prove most tenacious in future years, when recalling memories of the 10th March, 1863.

On the procession returning to the level, a small quantity of firewood in the centre was ignited, blazed up, and into the fire thus speedily made the remainder of the torches were thrown, and a right glorious bonfire was formed."

At *Sheffield*, besides all the other decorations and proceedings, no less than sixteen triumphal arches were erected in various parts of the town, through which, too, there was a grand procession.

In *Ipswich* the decorations were particularly numerous, and in some instances very tasteful. In more than one street nearly every house displayed an elaborate piece of adornment. A procession, including from two to three thousand persons, was organised and passed through the streets: the Volunteers were reviewed; and at the Arboretum in the Henley-road an oak was planted by the mayor, with ceremonies, in commemoration of the occasion; Mr. T. Shave Gowing, who has given much time to the formation of the Arboretum, invoking his muse and reciting as follows :—

"We plant thee, forest king,
Upon this grassy mound,
In hope that ages hence,
Thou still may here be found,
Echoing to after times
Our Prince's wedding chimes.

May he, like thee, grow on,
With many branches graced,
To be the stem and stay
Of his right Royal race!
He and his blooming bride,
The people's hope and pride!

Let's pray that Heaven may bless
The work that now we do,
As Heaven alone can bless
The good, the right, the true!
May God the youthful pair
Keep in His special care!"

A dinner, a ball, and good illuminations ended the day.

At *Bradford*, too, the mayor, Mr. M. W. Thompson, who is winning golden opinions, planted two memorial trees in Peel Park, the "Albert Edward Oak" and the "Alexandra Elm;" and then declared the park free from debt, making himself liable for a considerable sum in order that he might do so. In the evening the mayor and mayoress gave a ball in St. George's Hall, to which nearly 1,000 invitations had been sent out. The people and press of Bradford have properly recognised Mr. Thompson as the right man in the right place.

In *Windsor*, itself, we should note as a novelty (in addition to what we said last week), a verandah, formed by Mr. W. G. Johnson, in front of his house in High-street, which consisted of specimens of Moorish and Saracenic window tracery of early date,—similar, indeed, to some known to be of the ninth century, but whether actually of that period or not we are not in a position to say.

✠

At *Edinburgh* there was a review, a banquet, a people's demonstration, day and evening theatrical and other amusements, with innumerable illuminative and other decorations. The city was full of country people. The dome of St. George's Church was illuminated at one end of George-street and the shaft of the Melville column at the other, while St. Andrew's-square was illuminated on all sides. The Scott Monument, in Prince's Street-gardens had its prominent and architectural features also brought out at night by gas jets, and the Queen's Statue on the top of the Royal Institution was illuminated by the electric light brought to bear upon it from a distance.

In short, the illuminative and other decorations were universal; and the 10th was observed as a general holiday throughout all England, Scotland, and Ireland.

As an incident connected with the royal marriage, we may note, before concluding, that Mr. George Robert Stephenson, C.E., has presented the sum of 500*l.* to the town of West Cowes on the occasion of the marriage;—300*l.* to be devoted to the acquisition of the "Green" in that charming locality; 150*l.* to be invested by the authorities of the town, the interest accruing thence to be expended in painting and keeping in repair the seats on the "Green;" and the balance of 50*l.* in providing the destitute poor men, women, and children with a substantial dinner on the auspicious occasion of the arrival of the Prince of Wales and his bride on their way to Osborne, where they spent "the honeymoon," or at least a portion of it.

THE PHONETIC AND TECHNIC THEORY CONSIDERED.

IT is difficult to note the effect of Mr. Fergusson's recent work, "The History of Modern Architecture," upon the reading and writing architectural public, without being amused. Statements, assertions, and even logical arguments, previously exciting the utmost animosity, which but a few weeks ago were fiercely combated, are now gulped down without a wry feature or a word of complaint. If others have said hard things of architects and architecture, Mr. Fergusson may with justice claim the credit of having surpassed them all. This change, while being satisfactory in one respect, is far from being so in another, as showing that it is not so much due to internal conviction, as deference to a high authority. The giant has beaten the conviction into them, and the fear of hard knocks perhaps restrains the recalcitrant.

While agreeing with much that Mr. Fergusson has advanced, and giving him credit for great earnestness of purpose, I may perhaps be excused for pointing out what appears to so humble an individual as myself to be defective theory, fallacious argument, and incomplete illustration; but previously, for safety, would deprecate the Titan's apprehended blows.

An attentive perusal of the "History," from the title-page to the conclusion, will leave the impression upon any unprejudiced mind that the author has been suffering from a bilious attack, aggravating the action of the most acutely critical of critical minds. As it is much easier to find fault than to propose a remedy, it is, perhaps, questionable if any one is justified in making such wide and sweeping assertions without having previously proved the truth of his theory by some practical application of it, or being prepared with some well-digested scheme of regeneration.

Mr. Fergusson points out clearly—and, indeed, the whole of his writing is a model of diction and clearness—the inconsistency of employing two or more separate styles, in the same age, founded upon opposite principles; contending that, if one be right, the other must of necessity be wrong; but this is, we may see, an expedient resorted to merely from want of a style which will suit all classes of materials and objects. It is well known by all who have had any experience, or possess any taste, that Gothic is more suited to rude materials than any quasi-Classic style. We, in fact, labour under the disadvantage of having no suitable style to work with; and in lieu of this, we take the most natural course open to us, and adopt that style which meets the local wants most readily. That, at least, is the only *rational* way of using different styles in the same age.

Truthfulness is the one quality insisted upon which is to reform our art; but truthfulness was also insisted upon by Pugin and as strongly by Garbett, to whose theory of art the one adopted by Mr. Fergusson, divested of Garbett's eccentricities, bears a strong family likeness. But what is truth? The three authorities differ even on this point; and it may be asked, what has any of these theories produced? We are now fully as far off the wished-for goal as ever. If we are to judge of what this system alone can produce, we may take the examples quoted by Mr. Fergusson as being eminently truthful, such as the Federal Palace at Berne and the station at King's-cross;* and we find they are also eminently gloomy, heavy, insipid, and devoid of artistic qualities. Like most people who believe they have discovered a great truth, he pushes his theory too far; and to account for the want of natural progression and growth in architectural art which cannot be reconciled with the existence of true art, he makes a prominent distinction between what he terms the technic and phonetic arts, and hinges his whole theory upon it. To see a great analogy between *cookery* and architecture, and no analogy between *painting* and architecture, an analogy felt, seen, and expressed over and over again for some thousands of years, a man must wear a curious pair of spectacles, and look at the question through the medium of but one idea, in addition to possessing those qualities of mind attributed by Mr. Fergusson to the Aryan race. Strangely inconsistent with this statement is the counter one, that in the Italian style lies our only hope; a style by his own showing emanating from the hands of *painters*, who, one would suppose, would be most likely to be true to their own principles. By terming architecture the æsthetic form of the purely technic art of building, he slurs over the artistic difficulty; and though such may be the case, the inference he would have us draw from it conceals half the truth, nor can it be readily admitted that *any* useful art may be developed into a fine art. Shipbuilding is not a fine art, nor will it ever become one; for it does not possess the innate capacity for it. The form and beauty of a vessel are governed by purely mechanical laws, and the exquisite curvature of its lines is determined by the stability — carrying-power required, and the curve of least resistance. The less ornament about a vessel the better, and where such is adopted it is usually confined to the saloons, cabins, and other parts correspondent with the purposes of architecture on land. Undoubtedly any work of utility or mechanical arrangement may be decorated; but such decoration, so far from bringing it into the category of a work of the fine arts, in many cases, would only prove that taste was absent. Mr. Fergusson seemingly confounds *refinement* of mere contrivance with fine art, whereas fine art is dependent upon the æsthetic element being present. By his theory, a sugar-mill would belong to the technic class, and the works of a watch to the æsthetic form of the technic art of watch-making—or, at all events, would be classed with the fine arts. Probably he may not be prepared to go so far as this, for there are discrepancies in his theory difficult to surmount; nor is it possible to reconcile the whole of his statements with each other. The very division of the arts into technic and phonetic contains a fallacy, for the classification is not the most marked or obvious, being little more than a verbal distinction. What connexion can there possibly be between a map and an epic poem? Yet both of these must, by his theory, be classed in the same category; for the map represents the country in the place of *words*, quite as much as an historical picture does that of the incident it represents. Again, on the other hand, the technic, which comprise all the useful arts ministering to man's wants, are widely divergent. The art of butchering is a useful one, and demands skill, yet the most insane man would hardly compare it with the manufacture of porcelain or Minton's encaustic tiles, or pretend that both must be followed on the same principles and demand the same qualities of mind. There is one point of resemblance between all arts, whether it be poetry, painting, or pottery; and that lies in their progress being by a tentative process, though in different degrees. To confine, step by step, bit by bit, progress to the technic or useful arts, is opposed to all we know of the development of the human mind; for it is no less true that painting follows, and has followed, a law of development not unlike that of architecture. That painting may bear the impress of individual character in a greater degree than other arts, proves nothing, and is due to the execution being by the painter's own hand, when, on the contrary, an architect's conceptions are carried out by others. Between arts demanding the possession of similar qualities of mind there is a natural and close union; and whether it be painting, poetry, sculpture, architecture, or the potter's art, imagination, fancy, and invention are equally demanded.

The useful arts become fine arts only when the imagination and fancy are called in for their adornment, when the useful and the beautiful become blended. Progress in the mechanical arts is certain; and taste, though not subject to such rigid laws, should adapt itself to, and keep pace with, them. True architecture consults utility first, construction next, and beauty last. There is a certain measure of truth in the accusation that architects design *ab externo*, and without much reference to constructive exigencies; but such is not always the case. Architecture can never be developed upon *precisely* the same principles as mechanics, but upon compound principles; partly those of artistic composition, and partly those of utility and contrivance.

Fine art phonetic and fine art technic is rather a curious subdivision, which no one ever conceived before Mr. Fergusson brought it to light; still less the classification of painting by form and colour, light and shade, with word painting, or poetical narrative, in preference to cognate arts, which also depend upon form and colour, and possess other striking resemblances in their lineaments. The sister arts of painting, sculpture, and architecture cannot be practised upon principles identical in all respects, for the former are purely imitative, and the latter only so in a small degree, and that in the subordinate and decorative portions; but I maintain that the laws of composition, grouping, and disposition correspond in a most remarkable manner, and it is only from a knowledge of these that the architect becomes something more than the constructor or builder. Ornamental arrangement is nothing more nor less than artistic distribution disguised in another name, and founded upon principles identical with those that govern the picturesque in painting. Then, again, in alluding to the Reform Club House, he remarks that a grouping of the windows would improve it, showing plainly that whatever be his notions, the eye of the painter is still his guide, for in that remark lies the very essence of painting. In what he terms the technic arts, architecture, so far has sailed parallel with them as to have adopted constructive and utilitarian expedients in consonance with the age, such as the employment of wrought and cast iron as ties, girders, and columns, large sheets of plate glass, sash-windows, and a thousand minor expedients for promoting comfort and affording strength; but on this point, in which lies the only analogy between architecture and shipbuilding, machine-making, &c., he is silent. Agreeing with him, and, at the same time, lamenting the shortcomings and falsities of most modern art, I maintain that it does not proceed from the adoption of painters' principles, or lack of desire for truthfulness, but from a deficiency of artistic power and fancy, and general impotence of design, arising from several centuries of copyism. He shows very plainly the faults of modern buildings, and points out where they transgress the limits of good taste, and also the folly of applying ornament to purposes for which it was never designed, and is not applicable now. So far, this is good and satisfactory; and undoubtedly the "History" will have a highly beneficial effect in showing that a man may devote a whole lifetime to the study of ancient art without advising us to copy it. His work will make students more self-reliant and thoughtful, and go far towards upsetting that adherence to antique styles thought so necessary for the perfection of a work in the present age.

The recommendation to design in the most natural and obvious manner would be a great blow to that affectation of Mediævalism so rampant at the present time, which merits all the adverse criticism so ably bestowed upon it. Indeed, what Mr. Fergusson recommends in the *practice* of architecture, as far as it goes, though he deals rather largely in dicta, it is not my object to find fault with. I believe him to be right in the object he is contending for, but that his theory is wrong; that it is incomplete and inconsistent; that it is based upon a certain measure of truth, but wanting in warmth and vitality, and, if followed strictly, would lead to nothing but barren meagreness. From the manner in which he reiterates the same ideas, continually following one circle of thought without arriving at a thoroughly comprehensive system, he himself seems to feel the incompleteness of his theory, which would lead one to conclude that it is deduced more from the investigation of other men's work than an innate conviction, the result of his own practice.

A noticeable omission in the "elements of design," as expounded in his lecture to the Royal

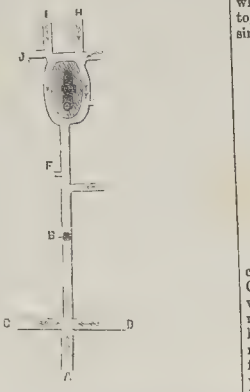
* Can it be considered truthful to terminate a couple of light iron roofs in a fashion to suggest the notion that they are the mouths of two immense tunnels?

ngineers, is the little prominence he gives to de-
ail. We are presented with the mere skeleton of
rchitecture, and told to clothe it with flesh and
lood ourselves; being simply directed to design
etail for the place it is to occupy, and we cannot
o wrong. This is a very easy way of dismissing a
ery great difficulty, for upon detail the reputa-
ion of an architect must depend more than upon
ny other point, the character of a building being
lue to it. We have numerous buildings that are
vell disposed in their parts, truthful and propor-
ionate, but fail from lack of consistent charac-
eristic and appropriate detail.

The great obstacle that meets modern architects
s the want of a class of detail suitable for modern
wants, for the decoration of door and window
openings, cornices, strings, and chimney-stacks,
that will possess great plasticity and admit of an
infinite variety of treatment; and the sooner we
set about inventing it the better. Such a class of
detail, I contend, is only to be obtained, in the
first place, by a combination of the forms we
already possess; for invention must of necessity
take that course before entirely original forms are
produced or developed. Such a course as this to
many minds appears fitted to destroy *character*
altogether; but never was there a greater mis-
take. I boldly affirm that it is the most direct
way to obtain character, which is dependent upon
the skill and intelligence of the designer, and re-
quires, in the first place, the selection of a few
strongly-marked features, and the subordination
of the minor parts to them. A combination of
Gothic and Classic forms would improve both;
would strengthen the former and soften the lat-
ter; would give us command of a much larger
field of selection; would compel original design,
and the thoughtful application of principles. Such
a course would soon place in our hands details that
we could use naturally and apply tastefully.
Architecture would not then require a continual
fighting with forms, the rigidity of which resists
every effort of amalgamation. It would then
be no longer necessary to veneer our buildings
over with columns and entablatures useless
and unnecessary, performing no function in
the building, but merely serving to block out
the light, and make that difficult which would
otherwise be easy. Neither should we re-
quire pointed arches or inconvenient mullions,
unnecessarily tall roofs, monstrous gargoyles, or
other antediluvian treatment imperative in modern
design. While, on the one hand, with rude mate-
rials, the Gothic element might predominate; on
the other hand, with finished masonry, a more
Classic treatment would be judicious; the range
of art would be widened; and invention, guided
by judgment and good taste, would be easily read
and appreciated by all who possessed even a latent
feeling or responsive sympathy with the *true and
beautiful*.

T. MELLARD READE.

PROPOSED ESPLANADE AND TRAMWAY FOR LONDON.



A COMPANY is in the course of formation to make a new street or esplanade through the metropolis, and to lay down trams thereon for the conveyance of passengers. The length of the line is four miles, and the width of the roadway is 70 feet, or the width of Regent-street. The line runs nearly midway between the Strand and Holborn, which is one of the poorest districts of London. Commencing at the Marble Arch, it passes to the south of Lincoln's Inn-fields, and the north of the Post-office, Guildhall, the Bank, and Gresham Chambers, until it reaches Aldgate, which is to be the terminus of the tramway. No carriages are to be allowed except on the trams.

The estimate for the land is 575,000*l*. per mile, but the promoters assert that the greater part of this will be returned from the sale of ground-rents.

THE ILLUMINATION CALAMITY.

SERIOUS as the accident proved at Ludgate-hill, when the circumstances are considered and the place examined where the calamity happened, we do not feel surprise at such an event occurring, but rather that a much greater loss of life did not take place, not only there, but in other directions.

The accompanying rough sketch will help to explain how the Ludgate-hill accident was brought about. A is Fleet-street, which was so densely crowded that a strong man who was examined at the coroner's inquest mentioned that it took him from between three-quarters of an hour to an hour to pass from Temple-bar to near La Belle Sauvage-yard, where the death took place. This is marked B in the sketch. Fleet-street was crowded to a dangerous degree; notwithstanding, from Farring-don-street, C, pressed thousands of people from Islington, Clerkenwell, and other northern parts of the metropolis. At the same time an immense mob was coming from Blackfriars Bridge along Bridge-street, D; and from the Old Bailey, F,

crowded many from the densely-populated neigh-bourhood of Smithfield, Barbican, &c., &c. Be-sides, from Cannon-street and Cheapside, through the two lines of way into St. Paul's-churchyard, there came a strong and struggling tide of human beings. In all directions the multitude were thronging to the narrow and already choked passage of Ludgate-hill. Moreover, this street ascends by a somewhat steep gradient from the Fleet valley to St. Paul's, and this would have the effect of giving an increased force to those who were coming from the eastward.

There is a strong and generally expressed opinion that no carriages should have been allowed on the illumination night to pass through the narrow streets of the City. The Mansion House might have been reached by other routes. So far, however, as our observation enabled us to judge, the single line of carriages which passed through the City seemed to act as a means of dividing the currents from the east and from the west; and but for them there would have been, without the least interruption, far larger masses of people coming into collision. Once in the City line, it was almost impossible to escape from it, for every opening was pouring people into the usually frequented road from Temple-bar to London Bridge. On this point there seems to have been great neglect, or rather want of management, in the arrangements of the City police. If barriers had been placed at the Holborn end of Far-ringdon-street and Bridge-street, and no pas-sengers allowed to go in those directions except from the City, the crushing at Ludgate-hill might have been much relieved. At other points the means of outlet should have been provided. In this instance, as well as on the day of the Royal entry into London, the City police seemed to be powerless. Nor is this to be wondered at when it is, perhaps, under the mark to state, that there were nearly a million of persons in the streets within the City boundaries; that the police force only amounted to 600 men; and that many of these would be required in various other quarters besides along the principal line.

There has been mismanagement in the City, both on the part of the police and some other authori-ties; but it must be remembered that there was in connexion with these rejoicings much indecision and want of co-operation on the part of Govern-ment officials; and there are other matters which may be taken, on the part of the Corporation, into favourable account. Still we cannot agree with many of the remarks made by the Lord Mayor when this subject was brought under the notice of the House of Commons. For instance, his lord-ship says: "There was a great pressure of people, no doubt; but if people will go in such enormous masses into places which are not large enough to contain them, it does not require great philosophy to see that two men cannot stand in the place of one. The accidents which have happened were very lamentable; but I do not see that any pre-cautions could have prevented them." The loss of life might, in all probability, have been prevented by better regulations; by stopping the flow of the people in certain directions; by a greater power of police force; but more particularly by widen-ing the chief thoroughfares of the City. People, especially when in great multitudes, will rush into danger; and it is decidedly the duty of the police and magistrates to prevent this.

We trust that, sad as this accident has been, it will have a good effect, and lead to improve-ment; and, as occasions are looming in the distance when immense crowds are likely to be brought together, that measures will be taken to prevent similar disasters hereafter.

HARRISON OF CHESTER, ARCHITECT.*

To Mr. Thomas Harrison, the architect of the castle and the bridge, Chester owes much of the Classical beauty of its architecture. Mr. Harrison was a man of great modesty and diffidence,—shy, reserved, and abrupt in his manner; and never put himself before the world in the light which his real merit deserved. He ever followed his pro-fession from a mere love of the art, and not with a view to the pecuniary emoluments of it. His personal qualities in some measure hindered his popularity with the world, and prevented him from becoming the public man which his genius and talents certainly entitled him to be. He was, in truth, a great man in his day; almost, if not quite, the first architectural genius in the kingdom; with a more clear apprehension of the principles of the art, and a more accurate know-ledge of the structural department of it than, perhaps, any man of his day. The designs which he from time to time submitted for competition, though not all executed, placed him in the first rank of architectural inventors; and yet most of those designs have passed into oblivion, and with them almost the name of the author of them.

The reason which induces me to offer a few re-marks on Harrison's career is the fact of his being ignored in the observations which Mr. Fergusson has made, in the third volume of his "History of Architecture," on the New Bridge at Chester. He has given to the bridge its full meed of praise as a work of engineering skill, though he severely criticizes the architectural details. But he ascribes all the credit of it to Mr. Hartley, without any mention of Mr. Harrison. Mr. Hartley, of Liver-pool, was the surveyor who took charge of the execution of Mr. Harrison's plan, upon the ex-press condition that it was not to be deviated from, Harrison himself being at that time disabled by infirmity and age. He never assumed to him-self the credit of the original design. Lest, there-fore, this mistake of Mr. Fergusson's should throw the name of Harrison wholly into the shade, it seems desirable to give some account of his history and his works.

It is right to remind you, in the outset, that the taste of Harrison as an architect must not be judged of by the taste of the present day. As he was born a hundred and twenty years ago, he commenced his career in a period of architectural taste and science wholly different from those which prevail in the present age. Whether that age was right, or this age is right, perhaps a succeeding age will be competent to decide; but, at any rate, the taste for the Classic style had possession of the public mind then, as that for the Gothic style has at the present time. In the early days of Harrison, Gothic architecture was deemed by most people to be characteristic of a barbarous age, the result of a rude uncultivated taste. The word Gothic was then only known as a slang term, not admitted by Johnson, to describe what was barbarous and uncivilized. We have lived to see it assume its proper position and to acquire a reputation, in this kingdom at least, above that of the Classic styles of Greece and Rome.

Mr. Fergusson has traced the course of the modern history of architecture from its revival in the Renaissance period to the present day, and reference should be had to that gradually descend-ing course from the period of Inigo Jones to the period of the Wyatts and Nash, in order to under-stand the disadvantages under which Harrison

* By the Rev. Canon Blomfield. The Substance of a Lecture delivered at a meeting of the Chester Archæ-ological and Architectural Institute.

first entered upon his career as a student of architecture.

He was born in the year 1744, ten years before the death of Gibbs, the author of the church of St. Martin's-in-the-Fields and the Radcliffe Library; when Sir W. Chambers was eighteen years old, and the brothers Adam were even younger; long before the period when Holland, Burton, Nash, Soane, Wyatt, and Smirke, became known to the world. His birth-place was Richmond, in Yorkshire. His parents were of humble condition, but managed to give him a good education, as we gather from the varied knowledge which he displayed in after-life. He was at all times an excellent arithmetician, and had a thorough knowledge of the science of mechanics.

Nothing, however, is known of his early life at Richmond until the year 1768, when he was twenty-two. He had a great friend, a native of the same place, and a fellow student of art, named Cuitt, who happened to be a *protégé* of Lord Dundas, Chief Baron of the Exchequer in Scotland. Cuitt was a landscape painter, and Lord Dundas, thinking that his talent might be more successfully cultivated by a tour in Italy than by painting the scenes near his own native town, offered to bear the expense of a tour for two years. Harrison was unknown to Lord Dundas, but Cuitt, aware of his genius, was anxious to give him a share of the advantage, and offered to make the allowance do for both. When this became known to Lord Dundas, he doubled the amount of the allowance, and sent both these youthful aspirants to study the masterpieces of art in Italy in the year 1769.

Harrison established himself at Rome, and made such good use of his opportunities that, in 1770, when Pope Ganganelli (Clement XIV.), who was a great patron of genius and a lover of art, desired to have some plans sent in to him for the decoration of the cortile of the Belvedere, in order to make it a receptacle for the Apollo and other antique sculptures, Harrison ventured to submit a design for surrounding the interior of the court with a rich cloister or arcade, 100 feet long each way, and covering the inclosed space, about 54 feet square, with a noble circular dome. The idea was much approved of by the Pope, and many other competent judges, amongst whom was Piranesi the elder, so well known as the author of the splendid series of etched views of the Antiquities of Rome. It is scarcely necessary to say that Harrison's design was not executed, for it was not likely that the Italian architects would submit to be superseded by a young and unknown student from England. They had been rendered especially jealous of foreign rivalry by the success of Allen, the Scotch painter, who had, in the previous year, carried off the first prize for painting in the Academy of St. Luke.

That academy had been founded by Pope Clement XIV.; and when, a year or two after, he proposed to alter and embellish the square, or open space, near the Porta del Popolo, he desired plans for the purpose to be sent in to the Academy, the merits of which were to be determined by certain judges selected from the leading members. Amongst these was Piranesi, and another was an Englishman named Byres. When the various plans were examined, Piranesi and Byres selected one, and the other judges selected another. The latter proved to be the design of a relative, or *protégé*, of the president: the former was the work of young Harrison. The final decision was of course in favour of the president's friend; but Piranesi and Byres were so much dissatisfied with it that they appealed to the Academy; and, that failing, to the Pope himself. Their representation to him was supported by the influence of Mr. Jenkinson, afterwards the first Earl of Liverpool, who was at Rome at that time. The Pope desired that all the plans which had been sent in to the Academy should be exhibited in their great hall, and the judgment of the public at large taken upon them. A great rush to see these plans took place, and the unanimous decision of the public was in favour of that of Harrison. Upon this the Pope sent for him, and presented him with two medals—gold and silver—in testimony of his approbation; and ordered the governing body of the Academy to elect him a member, and to give him a seat in their council. These medals, and the design for the architectural embellishment of the Piazza del Popolo, are now in the possession of Mr. Harrison's daughter, in Chester.

The Pope subsequently desired Harrison to give him a design for an alteration which he then purposed to make in the sacrista of St. Peter's; but the purpose was never carried out.

It should be stated that circumstances connected with the adjudication of the plans for the Piazzo del Popolo made so strong an impression in Harrison's favour on the mind of Piranesi, that he drew up an elaborate statement of them, highly laudatory of Harrison, from which this narrative is drawn.

Harrison remained in Rome for seven years, and returned to England in 1776. At that time designs were wanted for building a bridge over the river at Lancaster. Harrison sent one in, which was accepted; and the bridge stands now as the first work of his executed in England. It is said to be the first bridge ever erected in this country with a level surface.

The success of this bridge induced the magistrates of the county of Lancaster to select Harrison as the architect for rebuilding the castle at Lancaster, which comprised the gaol and court-house, and appurtenant offices. His design for this was of a Gothic character, foreign to his taste and experience, but adopted on account of the Mediæval character of the place; and considering the age at which it was built, it was a great effort of genius, still commanding the respect of the public on account of its massive and good proportions. After this, or during the progress of these works at Lancaster, he built the bridge over the Derwent, at Derby, and some others in different parts of the kingdom.

But we go on to the next great effort of his genius, the building of the Castle of Chester. Mr. Harrison had no connexion with Chester at this time; but the magistrates of the county, whether envious of the success of the Castle of Lancaster, or tempted by the wealth flowing in from the River Weaver dues, or finding that the old buildings of Hugh Lupus were wholly inadequate to modern uses, determined to pull down the old castle and build a new one. They put forth advertisements for plans, and of those sent in Mr. Harrison's were selected as the best. In these plans he gave vent to his peculiar taste, and produced the result of his studies at Rome in a building, or rather series of buildings, designed in a pure Classic style of Grecian Doric. And, taking it as a whole, the Castle of Chester, even at the present day, stands unrivalled in the chaste and Classic beauty of its style, and in its ingenious adaptation to the varied purposes for which it was designed. If a man builds a castle to live in, he knows how to arrange it accordingly; or if it is to be a gaol, or a court-house, or a barrack, or an armoury; but Mr. Harrison had to provide for all these objects in one block of buildings, and excellently well he has done it. It has sometimes been a subject of regret that the ancient buildings of the Castle of Hugh Lupus have disappeared; but it must be remembered that nothing remained of a very early date, except what still remains under the name of "Cæsar's Tower." There was, indeed, in the year 1788, when the alterations commenced, a fine old hall of the date of the fourteenth century, with a smaller one adjoining, called the Exchequer Chamber, in which the assizes were usually held; but these were not the halls in which the earls of Chester once held their Parliaments; nor had they any special character of beauty or early association to render them worthy of preservation; but be this as it may, the fashion of the day, as well as the genius of the architect, favoured the Classic style; and it may be deemed a fortunate circumstance that the building was committed to the care of one who so thoroughly understood the principles of his art. There were two Acts of Parliament obtained for the building of the Castle of Chester, the first dated 1788, in which power was given to borrow money for the purpose, and certainly money was liberally expended in rendering the structure of the main building, consisting of the gaol and the court-house, as substantial and solid as masonry could make it. Probably there is no gaol in the kingdom of so solid a structure, being built wholly of stone; no iron or timber being used in any part of the walls, ceilings, floors, or staircases. It is also said to have been the first *panoptic* prison erected in this kingdom. With regard to the Classic character of the exterior, it may be mentioned that the late Lord Lansdowne, on visiting Chester many years ago, did not hesitate to pronounce it the most classical building in Europe of modern erection; and that nothing of the real utility of the building was sacrificed to effect, may be gathered from the Report of the committee appointed by the corporation of London to examine all the prisons in the kingdom previous to the building of Newgate, of which Dance is said to have been the author. It pronounces "the castle of Chester to be one of the best-constructed gaols in the kingdom." Subsequently, M. Dupin visited Chester for a similar purpose; and he says, "The Sessions House and Panoptic Prison of Chester are united in the same building, which is most assuredly the handsomest of this kind that is to be seen in Europe. The interior arrangements are well contrived, and bespeak much regard for humanity. The architecture is equally simple and majestic." To this may be added the words of Richard Cumberland, the well-known dramatic author, who wrote in the "Observer" (vol. IV. p. 12), in 1790, "I indulge myself in a prediction upon which I am willing to stake all my credit with the reader, that when the modest genius of Harrison shall be brought into full display, England will have to boast of a native architect which the brightest age of Greece would glory to acknowledge."

We come now to an interesting fact in the history of Harrison's career. His early patron, Lord Dundas, had brought him under the notice of the Earl of Elgin, for whom, about the year 1796, he designed and erected a mansion, Broom Hall, in Fifeshire. This brought the two into frequent intercourse and considerable intimacy. When Lord Elgin was appointed ambassador to the Porte, in 1799, Harrison urged him to avail himself of the opportunity of obtaining drawings, measurements, and, if possible, casts of the remains of statuary and other works of art which existed at Athens and other places in Greece. The use which Lord Elgin made of Harrison's suggestions will be best understood from the following letter, addressed to him from Constantinople, by Lord Elgin:—

"Constantinople, Nov. 22, 1802.

My dear Sir,—Although you may scarcely recollect the advice and opinion you gave me at Broom Hall, in 1799, on the means to be employed for deriving what benefit I might have the opportunity of securing for the arts from the ruins of Greece; yet you will now learn with pleasure that I have not only used every exertion to act up to that advice, but have the satisfaction of assuring you that my success has exceeded every expectation which could possibly have been formed. Your advice was, to endeavour to obtain casts of all the architectural and sculptured ornaments which remain, in so far as they are descriptive of the orders of architecture or are in themselves remarkable. It was supported by the best judges I had occasion to apply to in England; so that I actually recommended the pursuit to Government in the view of extending the plan beyond what an individual could attempt. Circumstances not having made that possible, I resolved upon undertaking it, as far as my powers would admit; and I was confirmed in the resolution by Sir Wm. Hamilton, at Palermo, who approved of it in the highest terms. Accordingly I was so fortunate as to meet with Don Tito Lusieri, a painter of science as well as of brilliant professional talents; and on finding him enthusiastic in favour of your plan, it was agreed that he should go to Rome for assistants; and in fact he followed me soon to Constantinople with two formators, two architectural draughtsmen, and one figure-painter; himself having the direction of their operations, and carrying on the landscape and general drawings.

I had infinite difficulties in bringing all this to bear at Athens, where I naturally wished to concentrate their occupations. I had also very great difficulties to prevent the effect of intrigues and opposition when they had got there; but by the indefatigable zeal of Signor Lusieri, and great assistance from the gentlemen with me, we have succeeded in obtaining moulds of all the ornaments of the Temple of Minerva, of the Temple of Theseus, of the Portique, and of the Temple of Erectheus and the Pandroseum, and of the monument of Lysicrates. There are also moulds of a number of *bas reliefs*, and some metopes, of the Temple of Minerva, and of one of the caryatides attached to the Pandroseum. In several instances I have procured detached specimens, in good preservation, of the different ornaments of architecture, and in particular a series of capitals of the Doric order, and some Ionic and some Corinthian capitals and vases. The enclosed list of things already sent to England will best explain to you what has been done. Since that list was made out, several *bas reliefs*, dug out of the ruins of the Parthenon, and other ornaments, have been added to my collection, which of course is now drawing to its conclusion.

The architectural draughtsmen have, during this time, not been idle or ill-employed. I have now by me all the drawings of the whole of the temples at Athens, with most detailed and accurate measurements of every part, however minute; a work the more essential, as they had permission and the means of working without molestation or restraint, erecting scaffolding, &c. &c.; and I may venture to say, there never appeared more beautiful drawings of the kind. The principal architect's name is *Balestra*; his assistant, *Iltar*.

The figure-painter, of the name of Theodore (a native of Astrachan), a man of uncommon talents, has filled into the architectural drawings the frieze and metopes, and, in short, all the figures of the temples, with a degree of taste and execution which is, I am confident, unparalleled. He has, besides, made a great number of most valuable drawings from the *bas reliefs* and figures which are still to be traced at Athens.

I cannot ascertain exactly what Lusieri may terminate: he has begun two general views of Athens, several views of the Parthenon and the Temple of Theseus, besides other objects at Athens; and he is now busily employed with these works.

This is, as far as I can recollect at this moment, the outline of my operations at Athens. It has, of course, engaged our principal attention, both from the interest it creates and the benefit it may ensure. Meanwhile we have not neglected the rest of Greece. Mr. Hunt, and subsequently Mr. Hamilton, two gentlemen of great zeal and erudition, have, as well as myself, gone over great parts of that country, following up the same pursuits. And I have this summer sent Iltar, the architect, on a tour, which we had traced for him, to measure and draw every remnant of architecture which can have claims to attention from merits or renown; and as he has the means and the habit of excavating, and has already been four months thus engaged, I hope he will have observed

many interesting details. Besides, a Mr. Squire, of the engineer department, has lately been with Mr. Hamilton, principally employed in surveying the fields of battle of Marathon, Platæa, and Thermopylæ; and what is not the least of the valuable works, Lusieri has made the tour of the Peloponnesus with Mr. Hunt, sketching every object on his route, and has thereby a complete series of everything curious there.

Many of my acquisitions have, thank God, reached England. others are on their way on board of king's ships; and I have reason to hope the remainder will be soon properly embarked. I have lately, however, had the severe misfortune of losing a brig of my own, which had on board seventeen cases, marked on the list (B), though I am not quite without expectation of being able to recover them.

This undertaking has cost me an immense sum of money. It has given me endless trouble, and a degree of anxiety beyond what can be conceived by people not acquainted with the almost impossibility of advancing in such a place as this country and with these inhabitants. Still I feel a peculiar delight in acknowledging that I retain the greatest obligation to you, for having enabled me to do what has been done. For, I repeat it, you and you alone gave me the idea, and a notion of its importance.

I am on the point of quitting Turkey; and on my way home I hope again to see Athens. I shall probably then carry away all the artists who have not already left it, except Lusieri, who remains for some time. He knows your interest in these operations, and I wish very much that you would write to him, while he is on the spot, any observations, inquiries, or hints, to which his attention might be beneficially directed, and which may occur to you on examining what has been done. He is a man of great candour, and with such enthusiasm in this undertaking, that he would be equally thankful with me for any suggestions which might enable him to make his work more complete.

I send this letter to Mr. Nisbet, who will forward your answer to Lusieri.

Adieu, my dear sir, in the hopes of seeing you soon, and with every wish for your welfare, I remain, your very faithful humble servant,

ELGIN.

Thomas Harrison, esq."

Our possession, therefore, of these valuable treasures of art, now in the British Museum, is the result of Harrison's appreciation of the beauty of the works of the Classic age of Phidias and Pericles, which he could only have seen in the illustrations of Dodwell's Greece; and to him the real credit is due for their preservation. It is said that Lord Elgin spent nearly 30,000*l.* in acquiring and transporting these marbles, and they were purchased by the Government in 1816 for 35,000*l.*

It is not necessary to enumerate all the minor works executed from Harrison's designs, such as the commemorative columns of Lord Hill, at Shrewsbury, and Lord Anglesea, at Plas Newydd; the grand and massive obelisk, or pile of obelisks, on Moel Vamnau, the Church of St. Nicholas and the Athenæum, at Liverpool, &c.; but it is right to say that he was as successful in the construction and arrangement of private houses as he was in the design of public edifices. Broom Hall, in Fifeshire, and Clackmannan, in Argyleshire, are well-known instances of this,—as is the house which he erected for Mr. Potts, in Chester, the arrangements of which are exactly copied by Lord Ashburton in the house which he built for himself in Piccadilly. Harrison also prepared a plan for a magnificent mansion, to be erected in Russia for Count Woronzow, but it was never executed. The plan is preserved.

We come now to the last great work of Harrison's genius. After the completion of the Castle of Chester, it had ever been his ambition to procure a good approach to it and to the city, by a new bridge over the Dee. Bridge building had always been a point of interest with him, as enabling him to exercise his skill both as an engineer and as an architect. The architects of his early days were seldom competent engineers, and some of the bridges built by them—by Smirke at Carlisle, by Nash in Somersetshire, by Penson at Oberton, in Flintshire, and others—fell down after a few years' use, from defect of scientific construction.

When Harrison first submitted his design for the Chester bridge, the unusual width and flatness of the arch (being a small segment with a chord of 200 feet of a circle of 140 feet radius), it was objected to, as not likely to stand. To convince the objectors of their mistake, he had an exact model made of small pieces of stone of the same proportionate size as those of which the intended bridge was to be built, and set it up in the Exchequer Chamber of the castle, where it still stands. Even while the bridge was in course of building, considerable suspicion was entertained of its stability, after the framework of the centres should be removed. But in point of fact it did not sink 1 inch, and has remained to this day without the slightest deflection. Though Harrison had formed the design for the bridge many years before, the building of it was not commenced until 1827. At that time he was no longer able to superintend the erection of it; and it was intrusted to Mr. Jesse Hartley, an eminent civil engineer, residing at Liverpool. He stipulated, upon undertaking it, that Harrison's plan should in no point be deviated from; and, with the slight exception of raising the water line of the two side piers about a foot, the original plan was exactly carried out. The work was completed in 1831, two years after Harrison's death. The dimensions of the bridge are these:—The span or chord, 200 feet; the height from the spring of the arch to the centre, 40 feet; and from low-water mark to the top of the central parapet, 66 feet. The length of the roadway, 340 feet; the width, including footways, 35 feet 6 inches. The stone used in the construction is not all of one kind. That of the springing is Scotch granite; the outer course of the arch of Welch limestone; the remaining portions being of hard red sandstone from the Brotton hills. No one can view this noble arch, either from the cemetery on the east, or from the Roodee embankment on the west, without admiring the light and graceful curve with which it spans the river, like a rainbow arch, with the concentric lines of the curve, resembling those of the prismatic hues, and forming a noble frame to the large and picturesque landscape seen beneath and within it. Mr. Fergusson (p. 475), objects to the structure of this bridge, that "no one can by mere inspection believe that it is more than half its width." This is true, if seen from a distance, but hardly so when inspected from either of the places mentioned above. He ascribes this diminished effect to the use of an architrave moulding proportionate to the magnitude of the arch, and of spandrils and niches of a like proportion. He says "the builder has failed on every point of this bridge, and by the same process which ruined St. Peter's, by *exaggerating the details*." It might be possible to question whether the effect which he objects to being due to unity of proportion is not in itself an element of true architectural beauty. It is, as he admits, a marked quality of St. Peter's; and if Harrison has only failed in a point in which he has Michelangelo to support him, he can hardly on that account be thrust down from his position as an architect to that of mere building engineer. Mr. Fergusson's judgment on the bridge, and on its designer, will not, probably, be sustained by that of the public who inspect the work for themselves.

It has been already stated that the natural shyness and diffidence of Harrison kept him back from public notice; but he was well known in his own profession, and his taste and judgment highly appreciated. He was chosen arbiter in several cases of rival plans, where he was not himself a competitor, and consulted in many important undertakings. He was the first to suggest the idea of an embankment and roadway along the Thames from London Bridge to Whitehall, the detailed proposals for which are still in existence. He also made a splendid design for a triumphal bridge over the Thames where Waterloo Bridge now stands; and when the building of the present bridge was in agitation, finding that a plan had been adopted by the committee which appeared to him to be a mere copy of the bridge over the Seine at Neuilly, he addressed a remonstrance to them with so much effect, that they renounced the plan, removed the engineer, and employed Rennie to build the bridge which is now the ornament of the river.

Mr. Harrison died at his house in Chester in 1829, aged 85, and was buried in the churchyard of St. Bride's. No monument has been erected to his memory, and no memorial of him exists except in his works. He lies buried close to the castle and the bridge which were favourite objects of his interest while alive.

COMPETITIONS.

Birmingham.—Spring-hill Baptist Chapel and School Rooms.—The committee met on Thursday to select a design from the various plans submitted in competition for the above school-rooms; and Mr. F. D. Johnson, of Birmingham, was chosen as architect.

Freemasons' Hall, London.—We have received another letter on this subject, reiterating the belief that, referring to the Regulation already mentioned, the committee are not likely to employ any other architect than their own Grand Superintendent of the Works. In the face, however, of Mr. Havers' statement in our last, we do not think it necessary to print our correspondent's letter. The writer says, on another point,—

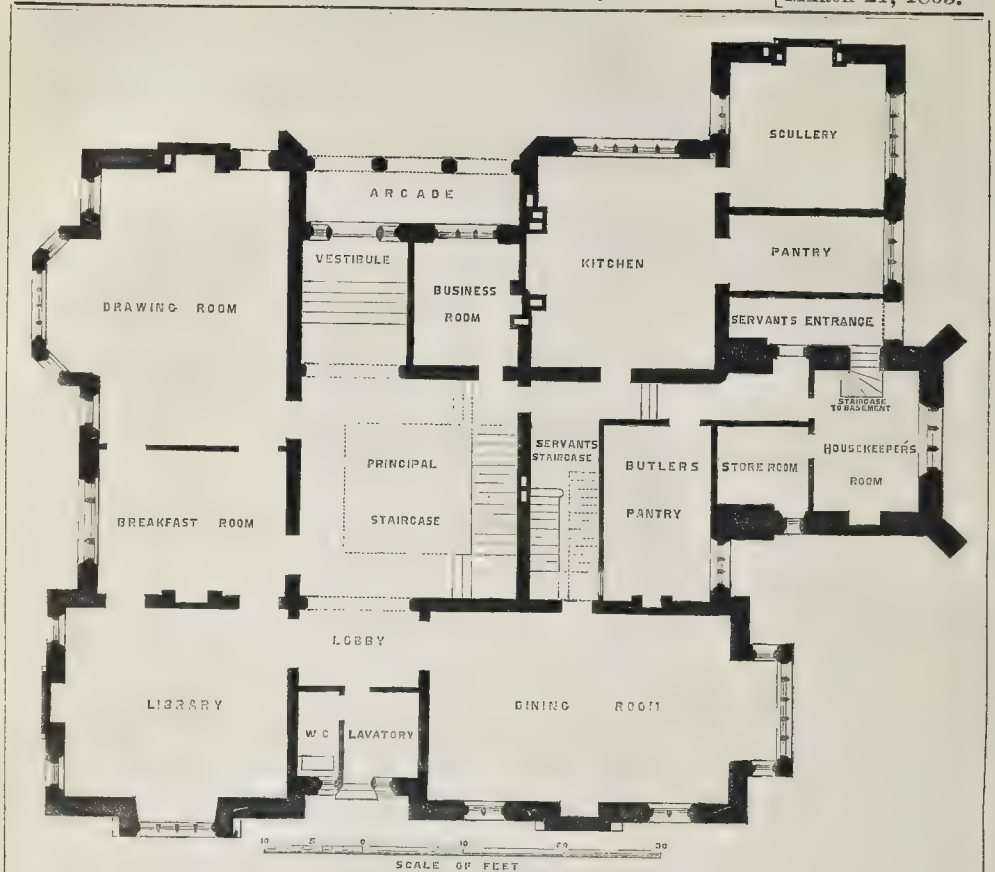
"I would respectfully remark to Mr. Havers that architects invited to send in plans, &c., and incur considerable expense, have a right to inquire into the merits of the proposition made, and a right to express an opinion without their endeavours to elicit the truth being qualified as *an attempt to impose on any one*. It is the duty of every architect to stifle unjust, unfair, and unprofessional competition; and I consider the present instance as a case calling for the particular attention of my brother architects. I for one shall not send in."

New Baptist Church, Worcester.—Invitations to submit designs for this building were addressed to twenty architects. The design by Messrs. Pritchett & Son, Darlington, has been selected, and is to be carried out by them.

RAILWAY MATTERS.

On the Great Eastern (new metropolitan station and branches) Bill being brought before the Lords last week for second reading, Lord Shaftesbury presented a number of petitions from the inhabitants of Coleman-street Ward, Finsbury-circus, and the neighbourhood, against the Bill, and a strongly condemnatory petition from medical officers and subscribers to the Royal London Ophthalmic Hospital, which is in contiguity with the proposed new works. His lordship said that unless the Government were prepared to take the whole subject of metropolitan railways into consideration, with the view to the introduction of a comprehensive and intelligible measure, he should move that the Bill be read a second time that day six months. The neighbourhood into which it was proposed to carry this line was densely populated, and as a breathing-place, and as a means of resisting contamination, Finsbury-circus was a great boon. The course of legislation for a number of years had been to give open spaces in every possible direction; and here, where there was an open space which was more than ordinarily beneficial, he urged their lordships not to permit the encroachments of a railway. He understood that the various metropolitan railway schemes now before Parliament involved the destruction of no less than a thousand houses, and would turn about 12,500 persons out of their homes.

Earl Granville said the Railway Department of the Board of Trade was preparing a report upon the whole subject; and perhaps the better way would be to postpone the Bill for a week, when he hoped that that report would be in their lordships' hands. It would be quite open to their lordships to appoint a select committee to consider the matter, after taking the evidence of witnesses which the Board of Trade would bring before them; and that course would guide their lordships in coming to a sound decision when the Bill came before the House again.



After some further discussion the debate was adjourned for a fortnight.

The Dublin Metropolitan Railway, though a small, is one of the most important undertakings that Ireland has seen since the introduction of the railway system into that country. Its object is to connect all the great lines which centre in the capital, and to make extensions to the shipping quays, along which tramways will be laid. The present isolation of the existing lines is thus removed: the interchange of traffic, now difficult and expensive, is facilitated and cheapened; and a thorough communication established for passengers and goods. The project has the support of all the existing railway interests. The capital required is 556,000*l.*, divided into 10*l.* shares.

A French newspaper states that some of the most distinguished engineers in France have approved a plan of a railway from Paris to Marseilles, which would resolve a problem hitherto considered impossible. They assert that the journey from Paris to Marseilles, 510 miles, may be accomplished in an hour and a half, with more economy and security than it is at present performed in eighteen hours! They are so decided in their opinion that several of them have demanded permission for the construction of the railway. The plan has been submitted to the Emperor for his approbation. The hydraulic system invented by M. Girard, in which he is said to substitute sliding for running on wheels, is the basis of the new plan.

If sliding be *substituted* for running on wheels, M. Girard's plan must indeed be a new one; but is it not possible that both wheels and sliding are intended to be used?

The Paris correspondent of the Brussels *Indépendance* says:—"On Sunday last the scheme for the passage of the Alps by railway over the Simplon was submitted to the Emperor, at the Tuileries. About forty agents, divided into two brigades, one turning to the north, and the other to the south of the Alps, under the leadership of two engineers, have, during four months, explored the mountain, and traced the plan of the future railway, which is to pass over rocks, cross torrents, fill up valleys, gorges, and precipices, before which

MR. JOHN CROSSLEY'S HOUSE.—*Plan of Ground Floor.*

science does not hesitate. It was frequently necessary to lower by ropes down the precipices the men who had to prepare the plans amid empty space, and the snow and avalanches more than once threatened to stop them summarily in their work. The result has been to put before the Emperor 80 kilomètres of ironway in the Helvetic Alps, 44 of which will be covered over, 23 in tunnels, and 21 in galleries. All these passages are ventilated either by shafts for the tunnels or lateral openings for the galleries. These openings, cut at different points into arcades, have a startling appearance. The execution of the plan, according to the authors, would occupy less than five years.

The estimated cost of this great project, including the fixed and rolling material, the interest of the capital employed, &c., is 72,000,000 francs.

MR. JOHN CROSSLEY'S HOUSE AT HALIFAX.

THIS mansion was erected some time ago for Mr. John Crossley, at Manor Heath, about a mile from the town of Halifax, Yorkshire, from the designs and under the superintendence of Mr. Alfred Smith, of the Adelphi (one of the architects of the Army and Navy Club House in Pall Mall). Mr. Smith's designs were originally chosen by Mr. Crossley from the competition drawings (all in the Italian style) of six selected architects, all of whom received a moderate premium for their trouble: afterwards, at Mr. Crossley's request, the chosen architect prepared the design in the Gothic style, which we have engraved.

The whole of the external walls are built with "Stainland" or "Park Spring" stone quoins, dressings, &c., filled in with self-faced, narrow York landings. These walls are battened internally, and the other walls are of brick. The carcass was built by local tradesmen, and Mr. Thomas Risley (a provincial architect) rendered valuable assistance as clerk of works. The windows are all on the sash principle, with the division of the upper and lower sashes immediately behind the stone transoms. The rooms were all fitted up and furnished under the direction of the architect. The ornamental portions of the ceilings, &c., were executed in Carton-pierre by Jackson & Sons, of Rathbone-place; and Messrs. Jackson & Graham, of Oxford-street, supplied the furniture and hangings.

ARCHITECTS' BENEVOLENT SOCIETY.

THE annual general meeting of this Society was held at the house in Conduit-street, on Wednesday, the 11th instant, as briefly mentioned in our last. Mr. S. Smirke, R.A., presided. The Honorary Secretary, Mr. J. Turner, read a report from the council, showing progression of the society. The report went on to say:—

"The number of cases relieved during the past year up to the present time has been 12, and the amount distributed during that period has been 213*l.*

The past year has furnished several remarkable illustrations of at once the usefulness of this Society, and the uncertainties that never fail to attend the architect's professional career.

Three instances have occurred during the year of gentlemen who have enjoyed at one period of their life a considerable practice, and who have, nevertheless, been compelled by adversity to appeal to the Society for aid. Sickness is an evil which the utmost caution cannot wholly secure us against, and is one of the most ordinary causes of that pecuniary distress to which the cultivated artist sinks into the humbled recipient of charity.

No doubt these sad reverses are not always, exclusively, the result of bad fortune: a want of worldly prudence, and a forgetfulness of the uncertainty of all professional incomes, are not unfrequently found to characterise the man of real genius; and charity bids us to deal leniently with these weaknesses of character. Who is there, indeed, so bold as to assert that he needs not the extenuating indulgence of his neighbour?"

The report further urged that the funds entrusted to them are miserably inadequate and unworthy of the profession. The following is the balance-sheet:—

Dr. 31*st December*, 1861.					
To balance at the bankers'		£93	7	11	
To donations to be invested		6	6	0

Balance at bankers' of Society's funds		139	9 9
		£420	10 5

Votes of thanks were passed to the president, council, honorary secretary, and other officers; and the meeting separated.

MR. JOHN CROSSLEY'S HOUSE, NEAR HALIFAX.—Mr. Alfred Smith, Architect.

THE CITY ARCHITECT; LONDON.

MANY of our readers will be much concerned at hearing that the health of the City architect has broken down under the severe pressure of business recently put upon him, and that he has for several days been confined to his bed, suffering from fever and depression, the result of the long over-strain upon his nervous system. As it is so lately that we offered our sincere praise of Mr. Bunning's services in connexion with the decoration of the City on the entry of the Prince and Princess, and in which view the whole press have been of one accord, we shall now only add our sincerest hope that the valuable services of this excellent officer may long be retained by the Corporation; and to effect this they will, no doubt, act with judicious liberality, and allow him, on his recovery, a prolonged leave of absence. We would venture to suggest, also, that Mr. Bunning's services should be limited, as architect only, to the buildings, improvements, and public institutions of the City. There is quite work enough for one head in that capacity alone; and let the harassing business of settling claims for compensation for houses and "goodwills"* be conducted by some competent surveyor, to be specially appointed. The duties are so divided by all the railway companies. The joint labour for one man, however industrious, is too much, and the imposition of it as impolitic as "working a willing horse to death."

THE ARCHITECTURAL EXHIBITION.

A GLANCE in the galleries in Conduit-street, at the drawings now nearly all hung in readiness for the Architectural Exhibition which is to open to the public on Thursday next, shows that the collection is much larger and better than might have been expected; and although some of the drawings were in the International Exhibition, the present gathering is a considerable advance upon the Conduit-street exhibition of last year. The general effect of the two principal rooms is much improved by some fine cartoons from foreign hands. The Society of Sculptors seem to be represented by busts or works of small dimensions. The *conversazione* will take place on Wednesday evening.

A VISIT TO THE PRINT-ROOM, BRITISH MUSEUM.

IT seems strange that the Print-room of the British Museum, which contains a rare collection of engravings after the works of the best masters of the various schools of painting, should be so little visited as it is, considering the multitude of students in painting, architecture, and engraving, and the large number of amateurs and persons of taste who are either residents in or visitors to the metropolis. At a vast expense, by the intelligent labour of many years, a collection has been formed which is not only a credit to the country but also of the greatest value as a means of art education. Nevertheless the number of visitors is so surprisingly small that it is difficult to account for the circumstance. The attendants are remarkable for their care in providing the various works which are required by those who call there, and the right of admission is as easily obtained as it is to the Reading-room.

It may be, however, that a different opinion prevails, and that persons are prevented from availing themselves of the Print-room by an idea that it is an exclusive place; or perhaps the extent of the treasures which are stored there may not be so generally known to the artistic part of the public as it should be. A glance at its general contents may make it more so.

On passing through the Egyptian Gallery, on the ground-floor, and ascending to the top of the first flight of steps which leads to the upper part of the building, the entrance to the Print-room will be found on the left hand. It is in no way marked, and many thousands of visitors pass by without being aware of the matters of interest which are to be found there. The initiated, however, pull a bell, and speedily the door is opened, and admission is given to a long passage, lined with cases, in which there are large volumes containing prints and drawings. Beyond is the Print-room, a large, well-lighted, and handsome apartment. In the central space there are tables and seats for the use of the visitors. Handsome cases are fixed around, which are occupied by large and richly bound volumes. On the top of the cases are capital busts of poets, painters, architects, engravers, and distinguished royal and other patrons of art.

Besides this principal apartment, there is the sanctum of Mr. Carpenter, the keeper of the prints. It is seldom that more than half a dozen strangers will be found in the room, and for the most part the three assistants are engaged in mounting drawings and prints, and making a list; we hope in connexion with a future and very complete catalogue. The performance of this duty does not, however, prevent the most prompt attention to those who have the privilege of admission.

It is necessary to explain to one of the attendants what is wanted. Perhaps we wish to look at engravings after the great Italian masters, or those of the Flemish, French, and other schools; or, it may be, to refer to the works of a particular painter,—and soon on the table before us we have the choicest etchings, by and after Rembrandt, or prints and sketches illustrative of the productions of Michelangelo, Titian, Rubens, and other artists, both foreign and British. On mentioning what is wished for, we can see in successive volumes or folios the best impressions of the engravings after Reynolds, Lawrence, and others. The pleasure of looking at the prints thus systematically arranged is of itself great, but their use to the student is more important, for thus are afforded rare opportunities for the youthful painter to study the expression of great minds, the principles of composition, and light and shadow. Indeed, few engaged in any of the various departments of art can fail to gather from these stores useful hints.

In other ways the collection is available; for instance, a painter might chance to be engaged with an historical picture of a particular period. Here, with very little delay, he may have placed before him examples of the costume of the period, or if he require an authentic portrait of some famous personage of ancient or modern date, he has the chance, by the guidance of the attendants of finding it, for in folios arranged according to the respective dates, are portraits of eminent personages. We have here English portraits of kings, queens, princes, and princesses, statesmen, philosophers, divines, and persons of eccentric or notorious character.

As regards foreign countries, such as Spain, Portugal, France, we find portraits of their famous men and women collected under the respective heads of French portraits, Spanish portraits, and so on. There are also historical English prints, each set of which is contained in a folio marked with the date which each is supposed to illustrate. It is very curious to examine this part of the collection, to see the engravings of doubtful historical drawings and pictures, and note the dawn of English art as exhibited in the prints of architectural monuments, the illuminations of manuscript volumes, and the introduction of artistic skill from abroad. Here are the matter-of-fact, impressive, and vigorous works of Holbein, and we have an opportunity of judging of the beneficial effects of the presence in this country of Rubens, Vandyke, and others, who may in some measure be considered the heralds of our own school of painting. Many curious matters of information may be gleaned from this part of the Print-room; and amongst other things may be noted the large amount of traffic which seems to have been carried on between the Dutch and English print markets during the time of James I., Charles I., the Commonwealth, the reign of Charles II., and for some years afterwards. Many of the maps, plans, and views of Old London are executed by Dutch engravers, and it is often troublesome to correct the mistakes of the names. The various important current events are also chiefly illustrated by Dutch artists and engravers. Some of the representations of scenes such as the Gunpowder Plot, the leading events of Oliver Cromwell's life, and the execution of Charles I., are worth notice. On careful examination of several of these prints which have an historical character, and which should be matter-of-fact representation, we fear that but little respect can be paid to their truthfulness. For instance, in the views of the execution of Charles I., which took place near the Banqueting Hall, Whitehall, Inigo Jones's building is made to appear like the town-hall of some Dutch town. The figures have also the Dutch stamp.

Amongst the lions of the Print-room is the "Illustrated Pennant," which consists of from thirteen to fourteen huge volumes; and in this instance we are greatly assisted by a clear and well-arranged catalogue of the multitude of prints and drawings which have been collected at so much expense and trouble in illustration of Mr. Pennant's account of London. Days might be usefully spent here by those who take interest in studying the rise and progress of the metropolis. In the various volumes will be found all the known maps and plans, from the earliest date at which these can be relied upon. There are also ancient views of places which have long since passed away; and representations of events of the greatest interest. The portraits of persons connected with the history of the metropolis which are to be found here are most valuable.

The collection of Flemish etchings and engravings in the Print-room is very fine, very large sums having been expended at one period of the management in obtaining rare and curious impressions. Some think that this large expenditure might, in part, have been more usefully made in other directions; however, we should not grumble at being in possession of those rare gems of art.

We might usefully devote space to a notice of the drawings, sketches, and engravings of the Italian artists, the works of Holbein, the drawings and sketches by Lawrence, Stothard, and many other English painters. But our present object is only to give a general notion of the value of this collection in connexion with which a complete catalogue is much wanted. The task will be a laborious and difficult one. The value of the catalogue would be great.

The care taken by Mr. Carpenter of the matters which are here intrusted to him is worthy of commendation. The chalk drawings and sketches are mounted in such a way that, while they are seen to advantage, it is impossible that they can be rubbed. Glazed cases are provided to prevent damage from dust, &c., during the process of copying; and year after year, this collection is being brought into better condition. Spite of all the attention, we notice to a considerable extent a sort of mildew on several of the large prints after Reynolds and his contemporaries. Light-coloured spots appear on the dark tints. Steps should be taken to arrest the evil.

* We understand that these claims, connected with the Smithfield improvements for example, are at this moment especially onerous. One firm alone claims 20,000*l*., and another, in the paperhanging trade, 30,000*l*.

CHURCH-BUILDING NEWS.

Newark (Notts).—The attention of the Newark Burial Board has lately been directed to the state of the entrance lodge of the cemetery buildings, the residence of the sexton; and some fears of its giving way being felt, they employed Mr. Allen, architect, to examine it. This gentleman has found that the foundations go a very little way below the surface of the ground; that the floors are rotting in consequence of the timbers being laid upon the bare soil; and that the building is wholly unsafe for habitation. In addition to these defects the house is a very poor one, all the rooms being inconveniently small. The supports and alterations required to put it into a substantial state of repair would cost about 60*l*. The expense of erecting a new lodge on a larger scale and of a better class, he estimates at 200*l*., using the old materials. It has, therefore, been determined to raze the old lodge and build a new one.

Bassingbourne.—Some restorations have recently been carried out in the Lady Chapel of Bassingbourne Church. The work done consists in the renewal of three windows; the restoration of the buttresses, base mouldings, and string mouldings; stripping the walls of the old plastering, and repairing with stonework after the manner of the original; removing the decayed timbers from the roof, and putting in new oaken ones, and new leading the whole; thus getting rid of the two unsightly props that for the last thirty years have disfigured that portion of the church. The sunken floor has also been taken up and laid to its former level. The side windows are square-headed, three lights: these, together with the east window, are renewed in accordance with the original work. The remains of several niches were brought to light during the progress of the works, some of which are now to be seen; and some specimens of old carved stonework were also taken out of the walls. The restorations have been done by Mr. Whitehead, of Royston.

Minster (Thanet).—The parish church restoration is slowly progressing. Pointed Gothic windows are being placed in the south aisle. A new clock is to be placed in the tower. The fine old trees that surround the church have been cropped, the loss of their limbs giving them a painfully prim appearance.

Lyndhurst.—Workmen have been busily employed at the parish church in removing the remaining portion of the old structure, which presented an unsightly appearance in connexion with the new part of the church. The south aisle, to

be built entirely at the expense of Mr. W. Williams, will render the interior of the building complete. The tower and spire are, however, still wanting to make the exterior an object of attraction.

Cardiff.—The new church, named St. Andrew's, at Crockherbtown, has been opened. In 1857 it was proposed to erect a church capable of accommodating 800 persons; the proximate estimate of the cost to be 4,000*l.* After much delay plans were submitted, and the work entrusted to Messrs. Prichard & Seddon, the diocesan architects. On June 21st, 1860, the foundation stone was laid, and the work progressed rapidly; but after a short time it was found that the erection of such a building would far exceed the sum intended, and the work was stopped for want of adequate funds, and so remained for a considerable period, when Mr. Roos, the architect to the Bute estates, received instructions to reduce the cost to the limits originally intended by the committee. The building, according to the local *Guardian*, bears the marks of two different hands; and the chancel, instead of being the most ornamented, is the plainest part. The arcades, as high as the clerestory, being the first built, are the most ornamental. A tower and spire were contemplated in the original design, and foundations and wall of a proper thickness have been put in to support them. Externally Bath stone bands are used alternately with bands of a blue sandstone, locally known as Newbridge stone. The walls are thus divided into compartments, and these compartments are filled with popple stone of various colours. The internal surface of the walls, and as carried out in the nave as high as the clerestory, consists of yellow brick face work with bands of Bath stone. The rest of the building is plastered in the ordinary way. The nave is 80 feet long by 63 feet wide, and is filled with two rows of seats, half of which are free. The style of the building is Gothic. The cost, it is hoped, will exceed but little the sum originally proposed. The *Guardian* notices the assistance rendered by Mr. Grierson and the Freemasons of Cardiff, for the carving of the capitals of the pillars. Much yet remains to be done in ornamentation. The church is fenced with a temporary rail. A large number of lime trees are planted.

Manchester.—The grand organ at St. Peter's church, by Messrs. Kirtland & Jardine, which has been furnished with a fourth manual for the solo stops, recently added to complete the original specification, has now been re-opened. It was expected that the whole of the stops would be completed; but, owing to some hinderance, it was found impossible to finish the solo tromba and the voix humaine: with these two exceptions, however, the whole of the instrument was playable. The *Manchester Courier* says of this organ,—"From a list of the thirty-six largest organs in existence it appears that only five organs in the United Kingdom, and only twenty-six organs in the world, exceed St. Peter's in number of sounding stops; and that as a church organ it ranks in England third, being exceeded only by the instruments in York Minster and Doncaster parish church; neither of these organs, however, having so complete a choir or solo organ."

Hulme (Manchester).—The first stone of St. Michael's Church has been laid. Mr Hugh Birley is the founder of the new church, which is to be erected on a nearly square plot of land in Lavender-street, adjoining the brewery of Messrs. Lord & Lomax. The new edifice will consist of a broad nave, 40 feet wide, with north and south aisles, chancel with double aisles, those on the north containing the vestries and organ. The whole width of the church will be 65 feet. There are also a tower, 100 feet high, at the south-west corner, with a square pyramidal slated capping; an octagonal baptistery projecting from the north aisle, and a porch on the north side. The material will consist of bricks in two colours, and stone dressings: marble will be used for some of the internal decorations. The total length of the church is 97 feet; but its square form has the advantage of bringing the congregation more within range of the minister's voice. Open seats will be provided for between 800 and 900 persons; and most, if not all, will be free. The architect is Mr. J. M. Taylor. The land is said to have cost 2,000*l.*, and the building will cost about 5,000*l.* A parsonage will also be erected, under the same contract, in harmony with the architecture of the church.

Eccles (Lancashire).—For twelve months great improvements have been in progress at the parish church at Eccles, and the restored structure has been re opened. A gallery, which formerly filled the east end, has been removed. There are now seats for 1,400 persons. The alterations have cost 6,000*l.*, including 800*l.* for stained glass windows. Most of the money has been raised by donations. St. Catherine's Chapel has been restored, and a large new organ (made by Hill, of London) has been placed in the south nave. There are several large and fine stained glass memorial windows by Messrs. Hardman, of Birmingham, and Ward & Hughes. That on the south-east side is the gift of Alderman Bennett, of Manchester, in memory of two of his children, and depicts scenes from the life of our Saviour. The other windows are the gifts of Mr. C. Smith, Sir E. Armitage, Mr. R. Chadwick, Mr. T. Cooke, the Heywood family, and the Vicar of Eccles. Messrs. Minton & Co. supplied the mosaics for the flooring of the chancel, &c., and the carved seats near the altar were by Hodson, of Manchester. On the new roof are painted the armorial bearings of the bishop, the vicar, the Archbishop of Canterbury, the Royal Arms, the Abbey of Whalley, and some others. On the panels of the pulpits there is some moulded Gothic tracery, to match the moulded and glazed screen which separates the chancel from the side aisles. A large window has been put into the west gallery, to throw light into the belfry. The vestry is a new erection, and built on the north side of the church. The whole of the renovations, alterations, and improvements, have been made from designs by Mr. Holden, of Manchester, and worked out under the direction of Mr. J. Lawton, of Manchester, as clerk of the works. The contractors for stonework were Messrs. H. & J. Paterson; carpentry, Mr. J. Bradburn; plastering and painting, Mr. J. Kerr; plumbing, Mr. B. Helsby; slating, Mr. John Brittain.

Sheffield.—The Attercliffe new Congregational Chapel has been opened. It has cost about 2,300*l.* and will seat 1,000. The chapel is in the form of a cross, has a curved (interior) roof, and is surmounted by a spire. A stained-glass window surrounds the arch within which is the organ loft. The pews are open, and a platform is substituted for a pulpit. The builders were Messrs. Craven, Brothers. The plumbing and stained-glass windows were by Messrs. Pitt & Son; the painting, staining, and gilding, by Mr. Kirby; the gasfitting by Mr. George Cropper. Mr. James Taylor, architect, designed the plans and superintended their carrying out.

Norton (Sheffield).—A portion of the northern wall of the old church of Norton having given way at the foundation, a meeting was convened for the purpose of deciding upon the steps to be taken for its restoration. The churchwardens produced a report from Mr. Frith, of Sheffield, architect, showing what was necessary to be done, and also offering suggestions for additional improvements, such as draining a certain part of the churchyard, &c., the probable cost of which would amount to about 170*l.* Whatever improvements may be agreed upon, it was the general opinion of the vestry that the cost should be entirely defrayed by voluntary subscriptions.

Burntisland (Fife).—The improvements on the church here which have been in progress for some time, at a cost of several hundred pounds, are now completed. The church was built at the expense of the inhabitants in 1592, and is of peculiar architecture, copied, it is said, from a church in Holland. The tower rises from the middle of the church, and is supported by four massive pillars with arches passing between them, and by abutting arches stretching diagonally from each corner. The tower was surmounted by a wooden belfry till 1715, when it was taken down and replaced by the present stone building.

Derry.—The first Presbyterian church in Derry has undergone extensive alterations and repairs. The expenditure, according to the *Coleraine Chronicle*, is estimated at 1,500*l.* Mr. C. Douglas, of Glasgow, was the architect; and Mr. A. M'Elwee, the contractor.

STAINED GLASS.

Bicester Church (Oxfordshire).—A large five-light memorial window is being erected in the east window of Bicester Church, in memory of Sir Gregory Osborn Page Turner, bart. The subject is the Ascension. The artists are Messrs. Cox & Son, of London.

Beverley Minster.—The tall three-division window above the entrance door of the south transept of this minster is now finished. The late Mr. Thomas Clarkson was the donor of this window. He caused the central division of the window to be filled with stained glass some half-a-dozen years ago, at his own expense; and some time before his decease he resolved to glaze the whole of the window with the same material, and at his own cost. Some delay took place on the part of the stained-glass manufacturers (Messrs. Hardman, of Birmingham), and Mr. Clarkson died before the work was done. But the window is now complete. A transom divides it into three large and three small compartments or lights, and the general design of the three larger designs is the Tree of Jesse, in medallions. The medallion at the bottom of the centre light contains Jesse; and branching up from him in other medallions are figures of the principal personages in the race of our Lord. In the principal part of these lights is our Saviour upon the cross, with the Virgin Mary and St. John on either side. The ground-work of the whole is foliage connecting the different medallions. The three upper lights are also treated in foliage work preserving the medallion form. In the centre of these the Holy Ghost is represented in the form of a dove.

Glasgow Cathedral.—The filling of the windows of Glasgow Cathedral with painted glass is advancing rapidly. Four windows, the production of a British artist, have just been inserted in the chapter-house. Mr. Henry Hughes, of London, had been commissioned with the execution of these windows. As compared with those of the Munich artists, they are very deep in colour, and by the employment of a rich, soft glass, made in imitation of that used by the old masters, Mr. Hughes is thought to have succeeded in producing effects similar to those which gave value to early specimens of the art. The subjects of the windows are the acts of mercy—feeding the hungry, clothing the naked, &c. The windows have been subscribed for by various persons, the Marquis of Tweeddale being among the number.

Greenock Mid-Parish Church.—Several stained glass windows have been put up in this church. The windows have been designed and executed by Messrs. Wailes, of Newcastle-on-Tyne, and are twelve in number, and of Roman architecture. Each measures upwards of 7 feet in height and 4 feet 6 inches in width. Five are placed in each of the east and west sides of the church, and two at the south end. The treatment adopted is that of a medallion group, set upon a mosaic ground, the whole inclosed with a border. Some of the windows are memorials of former pastors of the parish, and the remainder are gifts from parishioners and friends. With the exception of the two in the end of the church, the mosaic groundwork and floriated border are varied in each alternate window to give greater variety, and all of them are protected externally by strong galvanised wire-screens.

PROVINCIAL NEWS.

Harwich.—The extensive additions which have been making to the fortifications of Harwich and its harbour within the last twelve months are now on the eve of completion. At Walton-ferry, in Suffolk, is a martello tower, with moat and draw-bridge, the former communicating with the harbour, so that it can be flooded at a moment's notice. The tower is heavily armed; and is defended by a counterscarp, with earthwork battery, mounting guns of heavy calibre, and containing magazines, shell-rooms, &c. This battery commands the roadstead and also the entrance of the river Orwell, while on the opposite side of the river, at Shotley Point, commanding the entrance of the Stour, is another martello tower, heavily mounted, surrounded by a dry moat, and flanked by earthworks similar to those at Walton Ferry. Further up the river is a third fortress of the same description; and at Harwich, to the south of the town, is a circular redoubt armed with ten guns of the heaviest calibre, with barrack, dry moat, draw-bridge, counterscarp, and glacis extending to the water's edge. The works command the entrance to the harbour on the Essex side, while Landguard Fort performs the same service on the opposite or Suffolk side. The guns of this formidable cluster of batteries cross fire into each other, and can be concentrated upon a single object in the roadstead. Harwich offered the most favourable landing-place on the eastern coast for an invading enemy. The Government contractor for the new works, including the earthwork batteries, &c., is Mr. G. Tyrrel, of Great Yarmouth, who is also executing extensive fortifications in the Isle of Wight.

Boston.—A scheme is on foot for providing a spacious hall for concerts and general entertainments in Boston. The site is in South End, and occupied at present by a large granary. The property belongs to Mr. Chas. Seely, M.P., and it is thought it may be purchased for about 1,500*l.* It is proposed to raise the means of purchase and

erection by 250 shares of 10*l.* each. The ground space measures something like 40 yards by 20 yards.

Wick.—The new Court-house committee, Sir John Sinclair, Bart., in the chair, have considered the various estimates for the erection of the building and Mr. Rhind's report. The report was unanimously adopted. Mr. John Brims is the lowest offerer for the mason work, and Mr. Swan, Leith Walk, for the joiner, &c. The total cost will amount to about 5,000*l.*

FALL OF A CHURCH AT SHEEN.

ABOUT eighteen months since, in consequence of a want of church accommodation in the parish of Mortlake, the inhabitants of that vicinity determined to erect, at East Sheen, a new church, capable of holding some 500 persons. An approved design was furnished by Mr. Blomfield, and the contract of Mr. Carter, of Holloway, was accepted. It had been intended to carry up the tower only 40 feet at first, leaving its completion to a subsequent date. The building had been so far finished by October, but in consequence of some dissatisfaction expressed at the effect of this portion of the edifice, the principal subscribers determined the work should be continued at once; and during the last two months the tower has been completed to the height originally designed, 72 feet, with a lantern termination.

On Sunday morning, about twenty minutes after six o'clock, the masonry of the tower rising immediately over the altar fell with a tremendous crash, carrying with it a portion of the roof, and destroying the main arch at the altar end of the building. Of the tower scarcely one stone is left upon another, and the body of the church will require rebuilding at the altar end. No clerk of the works was employed; and it is stated to us that the walls of the lower part, which are 3 feet 6 inches in thickness, were, in the absence of the architect, packed with small stones and rubbish instead of being formed of solid masonry. The committee, with the full concurrence of the architect, have called in Mr. I'Anson, to report to them on the cause of the accident.

HALTING PLACES.

ALTHOUGH much has been done in providing places of accommodation since the *Builder*, some thirteen years back, first introduced the subject, still very much of the evil remains unredressed. There are miles of the most crowded thoroughfares without any places of resort; and the central City, where the walking population most converges, is perhaps of all the most neglected.

Lately, a motion was made in the Court of Chancery to restrain the parish authorities from erecting a suitable place of resort in Grosvenor-place: as this matter is still *coram judice*, no allusion is now made to it, further than to point out, that at a short distance from the proposed site, which is in the widest part of Grosvenor-place, there is an entry or passage by steps ascending to the Green Park, where without offending any householder or resident, a reserve might be inclosed, *within the wall, and actually under the level of the Park*, which might amply meet the palpable requirement: the *retiro* might be constructed on either side of the passage, and would be wholly out of view!

In another quarter, and where of all others such accommodation is most needed, there has been for years a licensed recess, which is as little suitable to its object as it is offensive to the crowds which constantly pass in review, within ten yards, as well as of the continuous line of busy commercial men who have to jostle through the court. At this juncture the interminable rolling stock of the streets discharges and takes up the greater part of the passengers; and here, in a recess formed in a basement window of the Mansion House, just 3 feet by 4 feet, and 7 feet high to the top of the arch, there are two compartments: outside there are constantly candidate expectants, and generally four or even more. Now, a little farther on, at the corner of the court, there is a wall of St. Stephen's ground—not being a place for sepulture—an angle of the court is here spiked off, and there is a length of 18 feet between the church and the doorway: could this space be better dedicated than to the sanitary purpose in question? The fence wall is 16 inches—18 inches in width in addition might be excavated from the interior space, and covered over with flags; taking in, say 1 foot, from this the widest part of the court, for a slate or iron screen, open at the top for ventilation.

The niche in the Mansion House must be a nuisance under the living-rooms: in fact, it is so; and the worthy occupant of the civic chair would certainly not object to its removal; nor can we anticipate any opposition from the clerical proprietary of St. Stephen's, Walbrook, to the establishment of so important a sanitarium upon church grounds.

The drinking-fountain movement has received much laudable support from the City magistrates. Although the blazonry of arms and names may not be affixed to places of refuge such as these, the benefits conferred by such easements are of even greater value: health, decorum, and morality are all promoted by them.

The impossibility of dealing with the question through private remonstrance or suggestion, *which has been tried*, necessitates an appeal to the *Builder*, as of old, by QUONDAM.

INCORRECTNESS OF THE ORDNANCE MAPS.

SIR,—Is anything to be done to bring the question of the Ordnance maps before the notice of the House of Commons? So inaccurately are most of the 25-inch scale sheets drawn, that I have not been able to find two that will join together so as to form a continuous map. As an example, I will quote Sheet LXXXIX, 13 and 14, in which there is a difference on the line of junction of more than 50 feet by the scale. I trust that you will, through the medium of your journal, place the question before the profession.

DUNELMENSIS.

THE GRATE STOVE.

IT occurred to me some time ago that it would tend much to the convenience of the rooms of the sick, and to the economy of heat and fuel, when such was desired, if an ordinary grate could be converted at will into a close stove; and this I have effected in a way, apparently, in principle, the simplest imaginable, which is as follows:—

I had two openings made into the arch of the chimney of a sitting-room: the first is the usual register-opening; and the second, a little in front of the other, is an opening only a few inches long and a couple of inches wide. The first of these openings, for distinction sake, I will call the register flue; the second, the stove flue. When a common fire is to be used, the register flue is opened, and a common fire of coals is lighted in the grate. When these coals have burned bright and the fire is getting somewhat low, in case the change to a close stove be wished for, the stove flue is opened and the register flue closed. Then, a close-fitting screen or plate of sheet-iron is placed in front of the fireplace; and this screen is sufficient to close up the whole front against the admission of air, with the exception of a hole, between one and two inches in diameter, which is left in one corner of the screen, so as to admit air sufficient to maintain the slow combustion of the stove-form. Should the stove fire require any fresh fuel, smokeless coal must be used, as coke, cinders, &c.

Thus, I can convert my open grate, in a few seconds, into a close stove; and, when tired of the stove arrangement, back again, in the same time, into an open grate.

JAMES KENNEDY.

WOOD PRESERVATIVE PROCESSES ABROAD.

I HAVE read with much interest the article in your journal entitled "Notes on the Properties of Wood." Noticing the importance you attach to the different processes for preserving wood, I make so bold as to offer you some data which have been arrived at in Belgium, Holland, and France, concerning their relative merits. It is quite true, as you say, that the continental engineers esteem the processes of English origin the most highly, and especially Mr. Bethell's creosoting process. The efficacy of the creosoting process has for some years been admitted in the most absolute manner by the engineers in the Netherlands, and no other wood-preserving process is used by them. It has been proved in an equally absolute manner in Belgium by a series of experiments upon the principal wood-preserving processes, made by the Belgian Government engineers. These experiments have lasted through a period of twelve years, and were conducted with the greatest care and vigilance. In the course of these experiments there were laid down creosoted sleepers, 223,654; sleepers prepared with sulphate of copper, 199,061; sleepers prepared by other processes, 25,730. And in 1860, "Compte Rendu des Opérations des Chemins de Fer Belges, 1860," page 28, the Minister of Public Works published his determination to prepare in future all railway sleepers with creosote, except the oak sleepers, which are not to be prepared at all. M. Crepin, a Belgian Government engineer, who has tried experiments upon the relative advantages of creosote and sulphate of copper for the preservation of timber in marine constructions from the attacks of worms, &c., has lately published a report, "Annales des Travaux Publics de Belgique," tome 19, in which he states that creosoting is the only process he has found to succeed for this purpose. Indeed, he states that sulphate of copper affords no protection whatever against the action of salt water and marine insects.

As regards France, I must add that although immense quantities of timber prepared with sulphate of copper have been used by the French railways; nevertheless, there also, experience points to the condemnation of this preservative. At the end of the last year, the committee of the Belgian engineers being unable to reconcile the facts they had observed in Belgium with the opinions of the French railway engineers, and fearing lest the failure of sulphate of copper in their experiments had been occasioned by some imperfection in their mode of employing it, the Belgian Minister of Public Works asked permission from the Nord and other railways of France for a committee of Belgian Government engineers to inspect the sleepers prepared with sulphate of copper and placed on the said railways in France. The result of the inspection made by the committee proved to them that no better results had been obtained in France than they had obtained in Belgium; and that consequently they had not to blame themselves for any want of skill in their application of the sulphate of copper process. It was quite by chance, through my being in London for a few days, that I came to read your article; and it is in the interest of truth alone that I send you the above facts, which I hope you will kindly place in your next number.

The Belgian Government now require that all the wood sleepers used in the state railways should be creosoted; and the Government of Holland have also made the same resolution; and upwards of 300,000 sleepers per annum are now being creosoted for the Dutch Government, and more by the Belgian Government. A. T., Antwerp.

THE STUDY OF WOOD CARVING.

SIR,—Although sincerely interested in the progress of art industry, I am, nevertheless, ignorant as to the best method of advancing it, even in what appears to me, its simplest application, namely, the carving of wood. I shall feel obliged to any of your correspondents who will inform me whether it would be practicable in a small town, seventy miles from London, to form a class in which this branch of industry might be cultivated in boys who may evince a natural aptitude for such education. I will not at present trouble you with other questions on this subject, as I hope that an answer to this one inquiry will anticipate many of the difficulties which oppose the establishment of a small school for wood carvers, on other than a costly foundation. F.

PATENTS CONNECTED WITH BUILDING.*

IMPROVEMENTS IN THE CONSTRUCTION OF ELECTRIC TELEGRAPH CABLES.—*A. J. Paterson.* This invention consists in the employment of a flexible or jointed pipe or tube, or series of tubes, within which the insulated conducting wires are placed. The pipes or tubes possess great tensile strength, and may be made water-tight by gutta percha, india-rubber, tarred hemp, or any suitable material or combination of materials, with or without wire, as circumstances may require. This flexible jointed tubing may be protected from corrosion, when made of metal, by galvanising or by being coated or covered with gutta percha, marine glue, or any other like protecting agents.

IMPROVEMENTS IN THE MEANS OF PRODUCING IMITATION MOSAICS (a communication).—*G. H. Birkbeck.*—Here the model of the design is first executed on paper, and coloured, to give an idea of the general effect ultimately required. This model design is cut into sections of the various parts of the design. These several sections, composing the picture or other work of art, are then placed separately on plates or surfaces of baked or unbaked earthenware, metal, or other substance suitable for enamelling upon, which is then cut or shaped to the exact contour or shape of the particular part of the design under treatment. When

* Selected from the lists in the *Engineer*, &c.

all the parts are thus arranged they are placed together to ascertain if they fit correctly, so as to represent the original design. The various parts are then covered with enamel, either separately or combined, the enamel being so applied to each part as to produce, when "fired" or baked, the various colours required in the complete design. When baked the parts are combined and cemented or secured together in any convenient way.

TILES.—*L. Faconnet.*—These improved tiles offer several advantages. One is that on a roof covered with them no overlapping will be apparent: thus, if covered with scale or shell-shaped tiles, no discontinuity will be presented, and it will appear as one whole, and if of even tiles it will form a perfectly plane surface, and as if made of one single piece. This is effected by giving to tile several real or apparent thicknesses, making it, for example, thinner at top and bottom than in the intermediate part—that which is alone visible when the tile is placed. These thicknesses might always be real, but in such case the weight of the tile would be considerable, and its strength unnecessarily great.

BUILDING A BONFIRE.

THE mode of forming the bonfire at Aldershott, which, in all probability, was the largest in England, may be usefully recorded, as it proved very satisfactory. During the preceding week a strong party of the Military Train had been constantly employed in conveying to the brow of Cæsar's Camp waggon-loads of furze, fir-branches, old refuse, and wood of every description, which were built up in the form of a cone, having a base whose circumference was 180 feet, and a height of 50 feet. First, a very stout fir-tree, 35 feet long, was reared on end, 5 feet being let into the ground, and supported by four struts. Around this were stacked the stouter timbers and materials to a height of about 10 feet, and to these succeeded fir-branches, raising the whole to 15 feet. Five full tar-barrels were now secured round the pole with wire, and the stocking of fir and furze bavins was continued to a total height of above 25 feet, the whole being pinned vertically with stakes. Four more full tar-barrels were here secured round the pole, and the top of the pile covered with a layer of hurdles pinned with stakes, forming a sort of staging from which to take a fresh departure. A topmast of 27 feet in length was now hoisted, and 7 feet of its length secured by wire to the lower pole. Again was the stacking continued, the material being passed up a series of stages erected all round the pile, and occasionally tar-barrels were hoisted to the top by means of a purchase secured to the topmast. These were emptied, and their contents allowed to trickle through the interior. 300 gallons were used for this purpose. When the pile had reached a total height of about 45 feet it was carried in, after the manner of the top of a sugar-loaf; an empty tar-barrel was placed on the topmast-head; and a topgallantmast, with a Royal Standard nailed to it, was fixed to the topmast-head, the flag waving proudly at a height of 70 feet from the ground below, and at a total height above the sea of 670 feet. Seventy stout fir-trees, about 35 feet long, were placed all round the cone, forming, as it were, an outer casing to the bonfire: these were secured in their places by wires passing all round the pile, each pole being secured to the wire by holdfasts. It is calculated to have contained upwards of 42,000 cubic feet of material. A number of men armed with portfires were stationed at intervals around the pile at a few moments before the appointed time for lighting up, and precisely at eight o'clock they plunged their portfires into the mass, which was instantly alight, and, the flames rapidly running up the outside, the whole pile was a sheet of flame in less time than it has taken to describe the event.

Books Received.

Sussex Archæological Collections, relating to History and Antiquities of the County. Vol. XIV. Sussex: G. P. Bacon, Lewes. 1862.

THE new volume of transactions issued by the Sussex Archæological Society is not inferior in interest and value to its predecessors,—a value we have often acknowledged. Petworth, by Dr. Turner; Hastings and its Municipal Rights, by Mr. W. Durrant Cooper; Eastbourne, by Mr. Geo. F. Chambers; Maresfield, by the Rev. Edward Turner; and Chiddingly, by Mr. Mark Antony Lower, are the most important communications. The volume contains a considerable number of engravings, some of them not quite so good as the text deserves.

Petworth is a place to be seen. Some of Gibbons's best work is here, added to with great skill by Jonathan Ritson, a native of Cumberland, who died in 1846. Dr. Turner, who knew Ritson well, speaks with regret of his intemperate habits and obstinacy. He would work only when he felt disposed to do so, and remonstrance had no effect on him. Had it been otherwise he might have attained to great eminence; but as it was he died in a back street of that town, worn out both in mind and body, and supported entirely by the liberality of the owner of the estate.

Transactions of the National Association for the Promotion of Social Science; London Meeting, 1862. Edited by GEORGE W. HASTINGS, LL.B., General Secretary to the Association. London: Parkers & Bourne. 1863.

THIS goodly volume of 900 pages and upwards contains an immense mass of matter connected with Social Science: even the table of contents would fill several of our columns. Besides the introductory addresses by Lord Brougham, the President, in opening the session; by Sir F. Kelly, on Jurisprudence; the Dean of St. Paul's, on Education; the Common Serjeant of London, on Punishment and Reformation; Dr. Fairbairn, on Public Health; Mr. Monckton Milnes, M.P., on Social Economy; and Mr. T. Twiss, Q.C., on Trade and International Law; the volume contains a long series of select papers, notices of papers, &c., on Jurisprudence, Education, Punishment and Reformation, Public Health, Social Economy, and Trade and International Law; with an Index to the whole. Seventy pages are devoted to papers and discussions on the Convict Systems of England and Ireland alone, including papers by Sir Joshua Jebb, Professor Mittermaier, Sir W. Crofton, Mary Carpenter, Catharine Fraser, and various others, the whole forming a highly important study at this precise moment for our legislators and others interested in the proceedings of Parliament on this question. On the subject of Public Health there are many valuable papers, including various contributions on the site, construction, and management of hospitals, by Drs. Turle, Sanderson, Steele, Markham, and Ballard, &c., with a summary of the discussions and minor papers on the same and other cognate subjects; papers on overcrowding in London, by G. Godwin; on the influence of occupation, by Dr. E. S. Thompson; on health and mortality in Birmingham, by T. Green; on the health of the army and navy, by Dr. G. Milroy; on the health of the London postmen, by Walter Lewis, M.B.; and various others. In the branch of Social Economy, besides papers on statistical science, on employers and employed, on co-operation, the condition of the working classes, and others, there is a summary of proceedings containing various contributions by ladies, chiefly on the condition and occupations of women. Various foreign gentlemen contributed papers on trade and international law, and on other subjects.

The volumes issued by the Social Science Association form a highly-important and valuable compendium of social science in all its branches.

We may here remind our readers that the next meeting of the Association will take place in Edinburgh, still under the presidency of Lord Brougham.

Advertise. How? When? Where? By WILLIAM SMITH, Acting Manager, New Adelphi Theatre. London: Routledge, Warne, & Routledge.

THE safe answer to Mr. W. Smith's queries, for the benefit of those who would sell their wares or draw audiences, is—By any means: Now; and Everywhere. For anything like a satisfactory article, wide and continuous advertising will insure a sale. There is always some one who wants what you wish to get rid of; some one desiring to sell what you want. The difficulty is to bring the two parties together. Our author is nearly right when he says "no trade or calling at the present time can afford not to advertise." Mr. Smith seems a master of the art, and gives many useful hints to those he addresses. Moreover, he has made his book very amusing, so that it will be read by hundreds who do not care about the subject, and thus the book itself is a capital advertisement for those who are named in it. Mr. W. McConnell and Mr. J. H. Swan have illustrated the work very efficiently; and Mr. T. Thompson, the scenic artist of the Adelphi Theatre, has provided a clever cover.

Miscellanea.

THE MUSEO BORBONICO.—With reference to the plan of the Royal Museum at Naples, given in our last, a correspondent, J. H., says there are very fair plans of the two principal floors of the Museum in "Murray's Handbook of Southern Italy," page 108, 2nd edition, 1855. "The plans in Murray are not quite correct with regard to thicknesses of walls and minor details, but the vestibule, grand staircase, and general subdivisions, are accurately drawn."

LIVERPOOL ARCHITECTURAL SOCIETY.—At the meeting, on Wednesday, the 11th, Mr. Weightman in the chair, before the paper was read, some discussion took place relative to the statue on the dome of the Town-hall. Mr. Boult contended that the statue was a representation of Britannia and not of Minerva; but Mr. Picton asked, if that was so, why the figure held a spear and not a trident. Mr. Huggins then read the first part of a paper, entitled "The Renaissance and Italian Styles, and the varied Offshoots of each in Transalpine Europe."

ROYAL HORTICULTURAL SOCIETY.—The second of the early flower shows of the season was held at these gardens on Wednesday. The flowers were, as before, arranged in a portion of the refreshment department of the Exhibition buildings. There were not a very great many, but some of the varieties were remarkably fine, especially the roses, which were of a size, beauty, and fragrance that would have done honour to a rose show in the midst of summer. Some good specimens of azalias and camellias were also exhibited.

HER MAJESTY'S THEATRE.—This theatre is at present undergoing re-embellishment at the hands of Messrs. Green & King, the decorators of the new Bath theatre. The decorations are being cleaned and restored, many parts having to be entirely repainted owing to the discoloration from the gas, and the damage caused by exceptional entertainments, such as those provided by the late M. Jullien. The method of lighting, too, is receiving attention, and several other improvements are being introduced with the view of improving the comfort of the spectators and the elegance of the house.

OFFORD ROAD LITERARY INSTITUTE, ISLINGTON.—The Rev. John Pulsford commenced a recent lecture on "Art, especially the Artistic Side of Christianity," by defining art to be that which enables us to make beauty out of matter, music out of sound, and poetry out of words. It was thus that the Great Artist created the world out of chaos. He created man in his own image: man is, therefore, the perfection of art; and he would defy any one to produce anything so beautiful and so touching as a sleeping babe. We may *study*, but we must not copy: art is not copyism. No matter how clever we may be in copying, we cannot call it art; for when it is copyism it ceases to be art. The great aim, therefore, of artists is to study nature and Scripture, and he who does so most successfully is the greatest artist. It was thus Handel produced his "Messiah," and thus are we led away by Dante's poem. The lecturer compared Greek art with Christian art, and urged that the object of both was to elevate religion.

A COMMENDABLE STOKER.—An exciting incident, eventuating in the saving of many human lives and limbs, on the Caledonian Railway, on the 26th ult., merits notification. While a mail train was on its way from Carlisle northwards, at the rate of forty miles an hour, an engine at the Beattock station was quietly engaged in taking in water, while the stoker was on the platform and the driver on the engine. Suddenly the driver (who must have been either drunk or mad) put on his steam, and instantly started for the south, on the line of rails which the mail train was at that moment traversing northwards. The horror of the stoker must have paralyzed him for a moment, but as instantly he regained his self-possession, leaped upon another engine which happened to be ready, put on all steam, and started in chase on the proper or up line adjoining. "After a race of thirteen miles," says the *Carlisle Journal*, "he overtook the truant engine near Lockerby; and, on getting alongside, leaped from one engine to the other; both going at the rate of fifteen or twenty miles an hour at the time. He had just time to reverse the engine, wake up the driver, who was asleep, and then run to the adjacent signal-post, when the limited mail came thundering along from Carlisle at forty miles an hour. It was fortunately stopped in time by the signal, within a few yards of the runaway engine." The stoker's name is not mentioned; but he deserves not only reward, but promotion to the engine which his driver has forfeited.

CLIFTON SUSPENSION-BRIDGE.—A portion of the chains of Hungerford Suspension-bridge has been received at Clifton. The contract for the carriage, hauling, and delivery has been undertaken by Mr. John Bland; and the bulk will amount to about 1,500 tons, viz., 1,000 tons from London, and about 500 tons of new chains from Dudley. The works at Clifton have been commenced, and are making steady progress.

MEXICO.—At 68, Newman-street, a number of cleverly-modelled figures, by native Mexican artists, representing the inhabitants of Mexico, are on view. These show people of all classes, and range from members of the Indian tribe who held Mexico at the time of the arrival of the Spaniards in 1518, to specimens of cultivated Mexicans of the present day. Apart from their interest in an artistic point of view, they serve to show the progress of development as it proceeds from the intermixture of the blood of distinctive races.

DISPOSAL OF THE METROPOLITAN SEWAGE.—The Metropolitan Board of Works have announced by advertisement that on the 8th of May next they will receive tenders for the disposal of the sewage discharged by the main outfall sewers. They require full information as to the manner in which the sewage is to be treated and employed; and if by irrigation, as to the distribution of the sewage, the quantity and locality of the land over which it is to be distributed, the points at which the sewage is to be intercepted, the daily quantity to be employed, the mode of effecting junctions or communications with the sewers, provisions against floods, deodorization or otherwise preventing the sewage from becoming a nuisance or injurious to health, and royalty to be paid to the Board, &c. The Board do not bind themselves to accept the highest or any tender.

THE ROMAN HOUSE, LEADENHALL STREET.—At the meeting of the Society of Antiquaries, last week, Mr. Tite, vice-president, in the chair, read a short paper, giving an account of the recent discovery on the site of the old portico of the East-India House, in Leadenhall-street, of the remains of a Roman room, *in situ* 19 feet 6 inches below the present surface of the street, and 6 feet below the lowest foundations of the India House, to which we have before alluded. Mr Tite stated that, until this discovery, though everything had been examined with the greatest care, no remains of any importance were found in these extensive excavations, except broken fragments of Amphoræ and Samian ware, until this spot was reached. The room was about 16 feet square; the walls built of Roman brick and rubble; the floor paved with good red tesseræ, but without any ornamental pattern; the walls plastered and coloured in fresco of an agreeable tint, and decorated with red lines and bands. He gave it as his opinion that this was a small room, attached to the atrium of a large house, of which, near the same spot, a large and highly-ornamented pavement was found in 1804, and the central portion of that pavement was now preserved in the Indian Museum at Whitehall. The paper was illustrated with an account of fifteen other pavements of the same kind, which had been found in the city from the year 1680 downwards.

OPENING OF ANOTHER TUMULUS IN ORKNEY. A tumulus in Burray has been opened, and a large number of human and canine skeletons discovered in it. The labourers first laid bare a strong-built stone wall, and they found that it was of circular formation. They stumbled upon a doorway, similar to that of the Maeshowe tumulus, which led to the inside of the building through a narrow passage. At the termination of this passage they came upon a small compartment, about 4½ feet square, which contained ten human skeletons and the skulls of some three or four dogs. They found in all seven compartments of small dimensions, each separated from the other by a large flagstone standing on end, and each containing the skeletons of human beings and dogs. There were also a number of fishbones. One skull measured three-eighths of an inch in thickness, and another one-fourth of an inch. The features appeared to have been of the Esquimaux type—stout and broad. These Esquimaux-like skeletons, with those of their dogs, and fish-bones, indicate, we think, a time and state of matters such as might have prevailed before the era of ice and flood,—or of glacier, iceberg, and drift,—had fairly shrunk to its present Arctic dimensions; and it goes far to corroborate the suggestions we made in connexion with the discoveries in the Orcadian "Sorcery hall" at Maeshowe; where, it may be recollected, an Ogham inscription was found which closely resembled one seen in a barrow of Arctic America, and attributed to progenitors of the Esquimaux.

CLOTH WORKERS' HALL. — Mr. Herrick has been commissioned by the Cloth Workers' Company, to paint two whole-length portraits of her Majesty and the late Prince Consort, for their hall.

WORKING MEN'S COLLEGE, GREAT ORMOND-STREET.—The new term has commenced. The usual classes, preparatory, elementary, and advanced, have been formed in arithmetic, algebra, conic sections, geometry, trigonometry, book-keeping, botany, geology, English history, grammar, and composition, the physical and historical geography of Italy, French, Latin, and German, music and drawing; also special classes in French literature and conversation, and précis writing.

THE GLACIER TRADE.—Glaciers have become an important article of commerce! A great ice traffic is springing up in Switzerland, and the orders already received are enormous. At Grindelwald hundreds of workmen are employed in cutting ice into blocks for sale. At the glaciers, after penetrating several layers, the labourers arrived at a natural grotto, 160 feet long, 8 feet wide, and 65 feet high. The men who first entered were lost in admiration at the magnificent spectacle. The grotto has since been lighted up with torches and illuminated with Bengal fire, and the light reflected from these walls of crystal, it is said, produces quite a dazzling effect.

THE SANITARY CONDITION OF ROTHERHAM.—On Friday evening in last week Mr. Childers in the Commons questioned Sir George Grey on the subject of the alarming state of things at Rotherham, to which we had called attention in our issue of that day; and in reply Sir George explained that the Medical Department of the Privy Council sent last year two inspectors to inquire into the cause of the great disease and mortality which prevailed at Rotherham, and they made a report stating that the principal cause appeared to be not only a deficient supply of water, but the polluted source from which it came. He believed that the corporation of the town had now a Bill before Parliament, the object of which was to give the town an unlimited supply of pure water.

GAS.—The Crystal Palace District Gas Company's report for the past half-year states that "the working during the half-year being in every way satisfactory, the directors have thought it but just, and in strict accordance with the principles always supported by the shareholders, that the consumers should participate in the success of the company: they have therefore made a reduction in the price of gas throughout the district, the reduction commencing from the 1st of January, 1863." The profits for the half-year are 3,180*l.* 18s. 10d., which, together with 467*l.* 7s. 9d., the balance brought forward from last account, makes the available balance 3,648*l.* 6s. 7d. Out of this sum the directors recommend the declaration of a dividend after the rate of six per cent. per annum on the preference capital; and a dividend after the rate of ten per cent. per annum on the ordinary capital of the company, both free of income-tax; the balance of 428*l.* 16s. 2d. to be carried forward to the profit of the succeeding half-year.——The Boston gas company's directors propose a dividend at the rate of 8½ per cent. for the current year.

NEW WATER-PRESSURE ENGINE. — "STEAM SUPERSEDED."—At the Water-works office, in Wolverhampton, according to the local *Chronicle*, a hydraulic engine is doing the work of a steam engine in the most complete and satisfactory manner. It is the invention of Mr. Henry James Lewis, a practical engineer. Its mechanism in appearance is much the same as that of the steam engine, with the exception that it has two globes or air-vessels upon the cylinder. The action is very simple. The water is supplied to the engine from the main by means of an ordinary pipe, and can be turned on or off by means of a common stopcock at pleasure. When the engine is about to be set to work the water is allowed to pass into a chest or nozzle, within which is a slide-valve, the same as is used in a steam engine. The water, having filled the nozzle, rushes through the passage that is not covered by the slide-valve into the cylinder, forcing the piston along with it, at the same time compressing the air in one of the globes or air-vessels until the slide-valve shuts the passage; when the air that is now compressed in the one globe, by giving a certain amount of elasticity to the water acting on the piston, enables the crank to continue its motion. After the valve has covered the one passage, preparatory to opening the other passage for the return stroke of the engine, the same process is repeated. The rectilinear motion is converted into a rotary motion by means of a connecting rod and crank, and applied to the purpose for which it is required by ordinary pulley bands.

NEW PIERS.—The Board of trade has under consideration applications for provisional orders allowing the construction of piers at Llandudno, Blackpool, Rhyl, Ilfracombe, Dartmouth, Exmouth, and Bray.

MUSEUM OF ART AND INDUSTRY FOR VIENNA.—The Emperor of Austria has just addressed a letter to the Archduke Regnier, ordering the foundation of an Austrian museum at Vienna for the arts and industry. The collections of the Court, the Arsenal, the Belvedere, the University, the Polytechnic School, and other public galleries, are to contribute to form this museum. A provisional gallery will in the mean time be formed in a hall of the palace. A committee, headed by the Minister of State, is charged with the preparatory arrangements.

MUSIC-PRINTING MACHINE.—A machine which, if all be true that is said of it, would have delighted the hearts of our great musical composers could they have relieved themselves of the drudgery of writing down the results of their inspiration by its means, has been invented and patented by Mr. J. B. Fenby. It is worked by electricity, and will print the music performed on any instrument having keys like a pianoforte. A piece of blank paper is put into the machine; and, as the tune is being played, it is said to print distinctly the staff, time, notes, and movements, such as *andante, allegro*, &c., with strict accuracy.

COAL MINE EXPLOSION NEAR NEWCASTLE-UPON-TYNE.—Nineteen lives or more have been lost by an explosion at the Coxlodge Colliery. It is believed that a fall of coal freed a volume of explosive gas to which the lights, which were uncovered, set fire; but most if not all of the deaths appear to have been caused by the after-damp generated by the explosion, the workpeople having taken the most dangerous course out because it was the nearest. In the part where the explosion occurred, it is said the pit was supplied with 11,000 cubic feet of air per minute, and so pure and "clean," as the pitmen call it, was the pit believed to be that the naked lights were uniformly used without any apprehension of danger.

THE MIDDLE-LEVEL SYPHONS.—The report read at the half-yearly meeting of the commissioners states that the works at the dam and syphons have been so far completed that they have dispensed with the services of Mr. Leather and his staff. The total expenditure under him, including the syphons, has been 53,321*l.* The report from the engineers had not been received; but Mr. Hawkshaw was believed to be of opinion that a new sluice would not be required, although the syphons had not all been set in operation. The chairman stated that he thought it very probable that they would not only serve for temporary use, but might perhaps render the construction of a sluice unnecessary. Since they had got to work it was found that their loss of fall was limited to one inch; so that, so far as fall was concerned, the syphons were as nearly equal to the old sluice as possible. But they had seen the water already three feet higher on the Level side of the syphons than on the sea side.

THE CITY BRIDGE OF THE CANNON-STREET EXTENSION OF THE CHARING-CROSS RAILWAY.—The sanction of the Admiralty and of the Conservators of the Thames having been obtained for the erection of the large iron girder bridge over the Thames, between London and Southwark bridges, which is to carry the extension of the Charing-cross Railway to Cannon-street, the first operations for the construction of this great undertaking were commenced within the last few days, a number of piles having been already driven on the Southwark shore, opposite Cory's Wharf, and immediately facing Steel-yard Wharf, on the City side of the river. The bridge, which will be constructed of iron girders, supported on cast-iron cylinders, will extend from Bankside, on the south shore of the river, to the north or City side, near Steel-yard Wharf. Its total length will be about 645 feet, and the width of the roadway, which latter will carry five lines of rails, will be about 60 feet. It will not be provided with a footway for passengers. The roadway of the bridge will be carried over the river on cylinders 12 feet in diameter, filled with solid brickwork. Between these there will be five openings or waterways, each about 130 feet wide, thus leaving plenty of space for the passage of vessels; while the distance between high-water mark and the girders of the central span will be 25 feet. The engineer of the new bridge is Mr. Hawkshaw; and the contractors for the ironwork are Messrs. Cochrane, of Dudley Woodside. The estimated cost of the City bridge, which is about half the length of that at Charing-cross, is about 120,000*l.*

THE BRISTOL SOCIETY OF ARCHITECTS.—The ordinary meeting for this month was held at the Acadamy of Fine Arts, on Monday evening, the 9th. Mr. Gabriel having taken the chair, Mr. Ponton read a paper on "Expression in Art." An interesting debate followed.

BRISTOL SCHOOL OF ART.—On Thursday, the 12th, Mr. Hammersley, head master, delivered a lecture on the "Ancient Schools of Painting, and on Styles of Engraving;" and on Friday evening, another lecture on "Bristol Manufactures." Both discourses were well attended. In the first lecture, the lecturer gave a rapid review of the schools of painting in the Italian states, in Germany, Spain, and France, showing the modes of practice, tenor of thought, and inner purpose of the most representative of the artists, including Michelangelo, Raffaelle, Julio Romano, Titian, Giorgone, the Bellinis, A. Dürer, and others.

THE INCLOSURE COMMISSION.—The report of the inclosure commission states that, since the passing of the Acts for the "inclosure, exchange, and improvement of land," 3,977 applications have been made to them, 2,997 of which have been confirmed, 461 otherwise disposed of, and 519 are in progress. The applications in the present year were 321. The greater portion of the applications are for exchanges; the total being 2,746, of which 251 were during the present year. In all, the acreage of inclosures confirmed is 424,971, and in progress 207,109.

SOUTH ENTRANCE TO PARK LANE.—In reply to a question put by Mr. Goddard, in the Commons, Mr. Cowper stated, that although Park-lane was not the property of the Crown, and was not in any respect under his jurisdiction, there was an authority who could deal with the subject, namely, the parish of St. George's, Hanover-square. By the Act of last year parishes and district boards had the power of expending the rates in widening the streets, such as Park-lane, with the consent of the Metropolitan Board of Works; and they had also the power of raising money for that purpose on the security of the rates. The parish of St. George's, Hanover-square, was a very wealthy one. Its affairs were managed by men of business and experience, and he hoped their attention would be drawn to the very great obstruction and inconvenience to which the hon. member referred.

THE BOSTON SCHOOL OF ART.—The committee of this school, in presenting their second annual report to the friends and supporters, and to the public generally, again express their gratification in recording its successful progress. The receipts for payments of the pupils have been sufficient to maintain the current expenditure. The gross number of students has been 130 against 106 in the preceding year. Both these numbers are exclusive of the Grammar School pupils and the children in the five public schools. The ladies' morning class and the Saturday morning teachers' class, however, have diminished this year; but the general day and evening classes have largely increased. Local medals were awarded to eight of the students; and three were selected by the inspector for national competition, and forwarded to the department. The committee express their renewed thanks to Mr. W. Simonds, for granting a better access to the school for the morning and afternoon classes; and also to Mr. Vernon Howard (the master), and Mr. Wm. Gane (honorary secretary), to whom the success of the school is in a great measure attributed.

MANUFACTURE OF IRON AND STEEL.—Messrs. Williamson, of Parliament-street, and Picard, of Lyons, have provisionally specified an invention, the object of which is to run molten iron or steel directly from a converting vessel, capable of rotating motion, into moulds or receivers. For a large casting they pour into one mould, or into a receiver placed over it, the iron or steel produced in several converting vessels by means of conveying gutters, which gutters are in communication with the converting vessels. Sometimes they make the converting vessel portable, and remove several to the mould.——An invention which relates to ball, mill, and puddling furnaces employed in the manufacture of iron and steel has been provisionally specified for Mr. Thos. Wright, of Coldbrook Ironworks, New Brunswick. The improvements consist in building such furnaces in pairs, with a stove formed in the neck, to receive the metal preparatory to its being passed forward into the body of the furnace, and in applying a blast of atmospheric air to such furnaces, either hot or cold, as required, whereby he obtains a more uniform heat, producing a better quality of the manufactured metal, with a larger yield also, effecting a saving in fuel, and a diminution of manual labour.

FREEHOLD LAND IN SOUTHAMPTON.—The Conservative Land Society has just made its forty-sixth purchase of estates (in twenty counties), being its first acquisition of building land in Hampshire. The property is called the Benois Mount Estate, with a frontage in the popular part of Southampton, well known as the picturesque promenade, called "The Avenue," on the London road.

TOWER OF ST. MARY'S, TAUNTON.—Mr. R. L. Boulton has completed the four remaining life-size statues to the Magdalen tower, Taunton, Somerset, viz., SS. George, Michael, James the Great, and Andrew; and for south porch of the same church, viz., over doorway in a triple niche, the three crosses; that is, Our Lord and the two thieves; and on each side a little below, in niches, the Virgin and St. John, half life-size. Under the pedestals of the triple niche are carvings of the emblem of the Passion, restored some years since. Inside the porch, in a niche, there is a figure of John the Baptist, in all seventeen statues, which complete the exterior. There are twelve niches in the nave, proposed to be filled with statues, and a life-size statue near the font, which will complete the interior, excepting statuettes, which are wanting to complete the reredos, the niches being empty.

FOG SIGNALS.—At the Royal Institution, a lecture "On Fogs and Fog Signals" has been delivered by Dr. J. H. Gladstone. The efficacy of different kinds of fog signals has formed the subject of investigation by a parliamentary committee, and the British Association having taken up the inquiry into the character and prevalence of fogs, they commissioned Dr. Gladstone to collect information and to report the results, some of which he stated in the course of his lecture. The only means yet known of giving warning at sea during fogs is by sounds of various kinds, and a question to be determined is, what kind of sound best answers the purpose. Bells, whistles, the firing of cannon, gongs, horns, and trumpets have been tried, and a recent invention by Professor Holmes of a signal trumpet was exhibited and sounded. Though only on a small scale, the noise it made in the lecture-room was so loud and discordant as to be almost stunning; and it was stated that it could be heard at a distance of two or three miles, while the report of a cannon is not heard during a dense fog much farther than 300 or 400 yards. The kind of fog signal, however, which Dr. Gladstone said he considers will be found most effectual is the transmission of sound under water, which is a better medium for sound than air, and is not affected by the state of the atmosphere. He exhibited a water "siren," which emits a very shrill sound, when put in rapid rotation, that might be heard through water at a great distance. By having a suitable ear-trumpet immersed in the water, Dr. Gladstone conceives that not only could the exact direction of such an instrument, but some approximation to its distance, be ascertained.

TENDERS.

For house, Wimbledon Park, for Mr. F. J. Pollock Mr. Francis H. Fowler, architect. Quantities by Mr. William Harris:—

Fish	£2,679 0 0
Aries	2,527 0 0

NEW WORK BY PROFESSOR JOHN TYNDALL, F.R.S.
In crown 8vo. with 131 Illustrations, price 12s. 6d.
HEAT considered as a MODE of MOTION: A Course of Twelve Lectures delivered at the Royal Institution of Great Britain.
By JOHN TYNDALL, F.R.S. Professor of Natural Philosophy in the Royal Institution.
London: LONGMAN, GREEN, & CO. 14, Ludgate-hill.

The First and Second Series, in crown 8vo with Illustrations, price 10s. 6d. each Series.
USEFUL INFORMATION for ENGINEERS.
By WILLIAM FAIRBAIRN, LL.D.
Corresponding Member of the National Institute of France; President of the Literary and Philosophical Society of Manchester, &c
Also, by Mr. FAIRBAIRN, Vol. I. 8vo. price 16s.
TREATISE on MILLS and MILLWORK. Vol. II. is in the press.
London: LONGMAN, GREEN, & CO. 14, Ludgate-hill.

ARITHMETICAL AND MATHEMATICAL SCHOOL BOOKS
By the Right Rev. J. W. COLENSO, D.D. Bishop of Natal.
*** New Editions, corrected and stereotyped.
ARITHMETIC for SCHOOLS; with an Appendix on Decimal Coinage.
By the Right Rev. J. W. COLENSO, D.D. Bishop of Natal.
12mo. 4s. 6d. KEY, by S. MAYNARD, 6s.
Also by BISHOP COLENSO, Recently Published,
TEXT-BOOK of ELEMENTARY ARITHMETIC, 18mo. 1s. 6d.; or with Answers, 2s. 3d.; or in Five Parts, separately, as follows:—
Text-Book, 6d.
1. Examples, Part I. Simple Arithmetic, 1d.
2. Examples, Part II. Compound Arithmetic, 4d.
3. Examples, Part III. Fractions Decimals, &c. 4d.
4. Examples, Part IV. Simple Equations, 3d.
5. Answers to the Examples, with Solutions of the more difficult Questions, 1s.
ELEMENTS of ALGEBRA, One Volume, 8vo 12s. 6d.
Part I. 12mo. 4s. 6d.; Key, 5s.
Hunter's Questions on Part I. 2s. 6d.
Part II. 12mo. 6s.; Key, 5s.
18mo. 1s. 6d.; Key, 2s. 6d.
EXAMPLES in ALGEBRA, 12mo. 2s. 6d.
EUCLID and PROBLEMS, 4s. 6d.; with Key, 6s. 6d.
The above PROBLEMS with Key, 3s. 6d.; without Key, 1s.
TRIGONOMETRY. Part I. 3s. 6d.; Key, 3s. 6d.
Part II. 2s. 6d.; Key, 6s.
London: LONGMAN, GREEN, & CO. 14, Ludgate-hill.

CHEAPER EDITION OF CRESY'S CIVIL ENGINEERING.
In One Volume, with above 3,000 Wood-cuts, price 42s. cloth,
ENCYCLOPÆDIA of CIVIL ENGINEERING, Historical, Theoretical, and Practical.
By EDWARD CRESY, Architect and Civil Engineer.
New Impression.
"A desideratum in engineering science is supplied by this remarkable volume. There is not a number of the profession, from the most eminent civil engineer to the humblest surveyor, who will not find here the materials to enrich his mind and extend his knowledge."—*Railway Gazette.*
London: LONGMAN, GREEN, & CO. 14, Ludgate-hill.

The Fourth Edition, in One Volume 8vo. pp. 1,164 illustrated with 1,000 Engravings on Wood by R. Branston, from Drawings by J. S. Gwilt, price 42s. cloth,
GWILT'S ENCYCLOPÆDIA of ARCHITECTURE, Historical, Theoretical, and Practical. Comprising:—
I. History of Architecture.
II. Origin of Architecture.
III. Architecture of various Countries
IV. Architecture of Britain.
V. Theory of Architecture.
VI. Construction.
VII. Materials used in Building
VIII. Use of Materials.
IX. Medium of Expression.
X. Practice of Architecture
XI. Principal Parts of a Building.
9. Combination of Parts.
10. Public Buildings.
With a Supplement on Gothic or Pointed Architecture, its Periods, Styles, &c.; a Glossary of Terms used by Architects, including an Alphabetical List of the principal Architects of all Times and Countries and their Works, and a Catalogue of the most useful Works on Architecture; and a copious Index.
"It should be possessed and used by every architectural student."—*Builder.*
London: LONGMAN, GREEN, & CO. 14, Ludgate-hill.

TWISDEN'S MECHANICS—NEW AND CHEAPER EDITION.
Just published, in crown 8vo. price 12s. 6d. cloth
ELEMENTARY INTRODUCTION to PRACTICAL MECHANICS, illustrated by Numerous Examples. Being the Second Edition, thoroughly revised, of "Elementary Examples in Practical Mechanics."
By the Rev. JOHN F. TWISDEN, M.A. Professor of Mathematics in the Staff College.
London: LONGMAN, GREEN, & CO. 14, Ludgate-hill.

BUILDER'S PRICE LIST BOOK, 1863.
Price 2s. 6d.
WILLIAM DAWBARN & CO. Liverpool, have now ready their Builder's Price List Book for 1863, containing the prices of all Building Materials, timber, slates, iron-ware, tiles, stone, glass, &c. &c. made up and corrected to the present date. The book contains sundry designs and useful calculations for builders generally.
The price is 2s. 6d. to those who have no account open with W. D. Co.; but persons desirous of opening an account, on giving satisfactory references, can have a copy posted free.
Prices current of Timber and Deals are issued monthly, and may be had on application.

NEW LAW of ART COPYRIGHT.
The Entire of the Law on this Subject, with Precedents of Agreements, &c. By H. M. UNDERDOWN, Esq. Barrister-at-law.
Now ready, price 7s. 6d.
Law Times Office, 10, Wellington-street, Strand.

NEW, ENLARGED, AND GREATLY IMPROVED EDITION OF THE ARTISAN CLUB'S TREATISE ON THE STEAM ENGINE.
In One Volume, quarto, with 37 Plates and 546 Engravings on Wood (200 new in this Edition), price 42s.
A TREATISE ON THE STEAM ENGINE,
in its various Applications to Mines, Mills, Steam Navigation, Railways, and Agriculture: with Theoretical Investigations respecting the Motive Power of Heat and the Proportions of Steam Engines; Tables of the right Dimensions of every Part; and Practical Instructions for the Manufacture and Management of every Species of Engine in actual use.
BY JOHN BOURNE, C.E.
Being the Fifth Edition of the "Artisan Club's Treatise on the Steam Engine."
The present edition of the Artisan Club's well-known "Treatise on the Steam Engine" has been almost entirely re-written by Mr Bourne, which accounts for the delay in its appearance. The work now comprises an account of the recent discoveries respecting the nature of heat, and particulars of the most important and modern improvements in boilers and engines, including examples of the most approved forms of apparatus for superheating the steam, and of the most noted engines for working with economy of fuel. A large number of new plates and woodcuts have been added and substituted; an appendix has been introduced, containing a large number of useful tables, practical specifications, and other important data; and the whole information which the work contains has been brought down to the present state of engineering science so as to afford an accurate reflex of the most advanced condition of engineering practice in this country, so far as relates to the subject of the steam engine in its various adaptations to mines and waterworks,—to mills and to locomotion,—and to the numerous miscellaneous purposes to which the steam engine is now applied.
BOURNE'S CATECHISM OF THE STEAM ENGINE,
with Practical Instructions, and 80 Woodcuts, price 6s.
London: LONGMAN, GREEN, & CO., 14, Ludgate-hill.

Just published, 2s. 6d.; mounted on linen, 4s.; in cloth case, 5s.
VACHER & SONS' PARLIAMENTARY MAP of the METROPOLITAN RAILWAYS, &c.; showing the Lines in Existence and in Progress, and all the Proposed Railways and Bridges for which Bills have been deposited for Session 1863. Scale, 3 inches to a mile.
VACHER & SONS, 29, Parliament-street, S.W.; LETTS, SON, & CO. 8, Royal Exchange, E.C.

NOW READY.
THE ENGINEER'S POCKET REMEMBRANCER; giving Data, Rules, and Formulæ. 5s. 6d. Applicable to Civil, Mechanical, Marine, Hydraulic, Lighthouse, Telegraphic, and Railway Engineering, surveying, &c.
By F. CAMPIN, C.E.
Publishers, ATCHLEY & CO. 106, Great Russell-street, London.

Now ready, round back, gilt edges, pp. 480 (postage 4d.)
THE ENGINEER'S, ARCHITECT'S, and CONTRACTOR'S POCKET-BOOK (Lockwood & Co.'s, formerly Weale's) for 1863; greatly improved, with many new Tables and much valuable and useful matter.
London: LOCKWOOD & CO. 7, Stationers'-hall-court, E.C.

Now ready, 12mo. strongly bound, price 4s. (postage 4d.)
THE BUILDERS' and CONTRACTORS' PRICE BOOK (Lockwood's, formerly Weale's), for 1863, revised by G. R. BURNELL, Esq. C.E. The Book is the universally recognized arbitrator in the settlement of disputed accounts. The present edition has been thoroughly revised. All those provided from stereotype plates, unlike the still some Books of the kind, errors are not perpetuated, and the opportunity is taken in every reprint to introduce important improvements.
London: LOCKWOOD & CO. 7, Stationers' Hall-court, E.C.

In One Vol. super royal, 4to. half morocco, 50s.
THE CARPENTER and JOINER'S ASSISTANT; being a Comprehensive Treatise on the Selection, Preparation, and Strength of Materials, and the Most Useful Practice of Framing, with their Applications in Carpentry, Joinery, and Hand Railing; also, a Course of Instruction in Practical Geometry, Geometrical Lines, Drawing, Projections, Perspective, and an Illustrated Glossary of Terms used in Architecture and Building.
By JAMES NEWLANDS.
Illustrated by an extensive Series of Plates, and many hundred Engravings on Wood.
"We know of no treatise on Carpentry and Joinery which at all approaches this in merit."—*Mechanics' Magazine.*
BLACKIE & SON, 44, Paternoster-row, London; and all Booksellers.

New Edition, with additional Tables, 12mo. bound, 7s. 6d.
PEDDIE'S PRACTICAL MEASURER; or, Tradesman and Wood Merchant's Assistant: containing a variety of Tables, designed for the use of Wood Merchants, Builders, Carpenters, Joiners, Sawyers, Plasterers, Painters, Glaziers, Masons, Bricklayers, &c.
By ALEXANDER PEDDIE,
BLACKIE & SON, 44, Paternoster-row, London; and all Booksellers.

WORKMEN'S TIME SHEETS.—All who employ workmen should send for SAMPLES of PRINTED TIME SHEETS and other useful forms, by which workmen's time is economised and bookkeeping facilitated.—MERRITT & HATCHER, Printers, Barge yard, Bucklersbury, London, E.C. Illustrated Lists, Architectural and Mechanical Drawings, Elevations, Sections, Maps, Plans, &c. Estimates gratis.

KITCHEN RANGES! !—Architects, Builders, and others, will save time, labour, and money, by consulting "The Cyclopædia of Modern Inventions." Post free London BROWN, BROTHERS, 24, Charlotte-street, W.C. References to see in operation in London and all parts of the United Kingdom.

ECONOMY in BOOKS.—BOOKS forwarded to all parts of the Kingdom, on the lowest terms, for ready money.
GEORGE SEELEY, 32, Argyll-street, Regent-street, W.

MR. WILLIAM ELLISON, ARCHITECT and CONSULTING SURVEYOR, OFFICES, 18, FENCHURCH-BUILDINGS, FENCHURCH-STREET, E.C.

DRAWINGS, PLANS, TRACING, &c. EXECUTED with Accuracy and Despatch, on moderate terms, by MESSRS. THORPE, Mechanical and General Draughtsmen, 81, Hatton-garden, E.C.

MR. G. NEWENHAM (Pupil of G. G. Scott, Esq., R.A.) PREPARES Sets of Competition Designs, Working and every description of Architectural and Artistic Drawings. Perspectives Outlined in a superior manner (and coloured by the best artists), with punctuality and despatch, and on reasonable terms.—Offices, 26, Parliament-street, Westminster, S.W.

MR. J. H. LEONARD, ARCHITECTURAL DRAUGHTSMAN, ARTISTIC COLOURIST and LITHOGRAPHER, No. 21, MONTAGUE STREET, RUSSELL-SQUARE, W.C. Competitions and every description of Architectural, Working, and Detail Drawings prepared.

TO ARCHITECTS, BUILDERS, &c.—The PURCHASE or DISPOSAL of PRACTICES, PARTNERSHIPS, and BUSINESSES efficiently CONDUCTED by Mr. GEORGE THORNE, 19, Austin-friars, London, E.C. Particulars on application.

A PARTNERSHIP is offered to a Builder having about 2,000*l.* at command, to join a builder in an established business, and who is at all adding or enlarging to his present trade. There are no old debts to pay off, and the business is carried on upon the advertiser's own freehold.—Apply to Mr. BEARDEN, 91 and 92, Piccadilly.

TO PARENTS AND GUARDIANS.
A GENTLEMAN of great experience, at present engaged upon some extensive works in a most pleasant and healthful part of the country, is desirous of taking a PUPIL for six months. He would have a good opportunity of making himself acquainted with the practical part of each trade, and receive proper instruction from the advertiser, with whom he might reside, if necessary.—For terms, &c. address, in the first instance, to O. P. Q. Post-office, Oakley terrace, Old Kent road, London, S.E.

WANTED, a good GRAINER of WOODS, MARBLER, WRITER, &c. a sober, steady man. Constant employment. Terms to be stated.—Address, W. & J. SCARBOROUGH, Grantham.

WANTED, in a BUILDER'S OFFICE in a large Provincial Town, an ASSISTANT, thoroughly competent to undertake the Preparation of Estimates and Measurement of Work.—Address, stating age and salary required, B. M. Post-office, Birmingham.

WANTED, in a large Building Establishment and Art Works, a competent and trustworthy PERSON to TAKE CHARGE of the BOOK-KEEPING DEPARTMENT. He must be thoroughly conversant with the details and business of the trade, and capable of making up Accounts, Measuring, and Valuing Artificers, and other Works. Application, with references as to ability and character, to be made to S. F. S. Post-office, Shrewsbury.

TO ARCHITECTS' ASSISTANTS.
WANTED, a steady, persevering FIRST-CLASS ASSISTANT, to take the MANAGEMENT of an Office in the country. He must be a good and rapid Geometrical Draughtsman in the strictest style, as well acquainted with detail and construction.—Address, with references, &c. to E. E. H. Post Office, Hereford.

TO BUILDERS' CLERKS.
WANTED, in a BUILDER'S OFFICE, a CLERK, who is versed in the business, can give a satisfactory reference, and keep a set of books. Salary, 40*l.* per annum.—Apply to Messrs. FASSNIDGE & SON, Uxbridge, Middlesex.

HANDS WANTED.
WANTED, a few EXTRA HANDS.—A MARBLE MASON who can fix chimneypieces; EVEN POLISHERS, &c.; also a Married Man, as CARMAN to a light van, one of the eight o'clock, Westminster Marble Works, 1, Earl street, Bloomsbury-square, S.W.

WANTED, a MARBLE and STONE MASON, used to monumental work. Constant employment for a good workman.—Apply, stating full wages, where last employed, &c. to J. B. ROBINSON, Midland Sculpture and Monumental Works, Derby.

TO CIVIL ENGINEERS.
WANTED, by a Contractor, an experienced ENGINEER, thoroughly well up in levelling, setting out, and measuring up work.—Apply to T. NELSON, Gromont, York; Contractor's Office.

CEMENT WORKS.
WANTED, a FOREMAN, to superintend the MANUFACTURING DEPARTMENT of an extensive and well-established CEMENT MANUFACTORY. Applicants must be thoroughly acquainted with the Manufacture of both Portland and Roman Cements, and possess sufficient knowledge to take charge of the machinery. Satisfactory references as to character and ability will be required. The remuneration will be liberal.—Apply by letter, addressed to W. to the care of Messrs. Le Blonde & Co. Printers, &c. Budge-row, London, E.C.

TO CABINET-MAKERS.
WANTED, a First-rate WORKMAN accustomed to Gothic work.—Apply by letter, with references, &c. to Messrs. SKIDMORE & CO. Alma-street, Coventry.

TO DRAUGHTSMEN.
WANTED, in a Ship-building Yard, a YOUNG MAN who has been a few years at the business as an IMPROVER, to whom a small salary will be given.—Address, J. Box C 13, General Post-office, Liverpool.

WANTED, by a Young Man, a SITUATION as LETTER-CUTTER in a Mason's Shop. Town or country.—Address, T. B. 23, Hermitage-street, Paddington.

TO BUILDERS, PLUMBERS, &c.
WANTED, by a respectable Young Man, EMPLOYMENT as PLUMBER, GASFITTER, &c. No objection to fill up his time in plain painting. Good references if required.—Address, W. S. No. 2, Lealand-terrace, King's-road, Chelsea.

TO HEADS OF FIRMS, GENTLEMEN, AND OTHERS.
WANTED, by a Man of great experience, a Joiner by trade, a SITUATION as SHOP or GENERAL FOREMAN, or Clerk of Works on an Estate. Good reference.—Address, H. G. W. 55, Winchester-street, Pimlico, S.W.

TO BUILDERS, &c.
WANTED, a SITUATION as CLERK, by a Young Man of good average ability, in the office only.—Address, X. Y. Post-office, Felix-terrace, Liverpool-road, Islington.

TO ARCHITECTS AND SURVEYORS.
WANTED, by a Young Gentleman, a RE-ENGAGEMENT as JUNIOR ASSISTANT. Four years' experience. Terms moderate.—Address, B. C. 14, Upper Stamford-street, S.

WANTED, by a practical and theoretical Person, a SITUATION as MANAGER of a STONE and MARBLE WORKS, either by hand or machinery: also to attend the showroom, office, and estimating department. Having had twenty years' experience in one of the most extensive establishments in the metropolis, can command an extensive town and country connexion. Address, by letter, appointing an interview, to O. Z. care of J. B. 13, Ponsonby street, Pimlico, S.W.

WANTED, by a practical Man of good experience, a SITUATION as CLERK of WORKS, FOREMAN, or General Manager on an Estate. Has a thorough knowledge of estate work and general improvements. TO BUILDERS AND OTHERS.

A BRICKLAYER will take a JOB to COMPLETE, or by the Rod, as suits; or as FOREMAN. Good reference and security, if required. Address, W. T. 8, Albert-terrace, London road, Southwark.

A THOROUGHLY Practical CLERK of WORKS, who has had good experience in Gothic work, desires a RE-ENGAGEMENT.—Address, G. H. Mr. Oakes, High-street, Wimbledon, S.W.

TO BUILDERS AND IRONMONGERS, &c.

A RESPECTABLE MAN, of good address and manners, a first-class bellhanger, locksmith, and gasfitter, is in want of a SITUATION.—Address, R. J. 8. Builder Office.

TO BUILDERS, &c.

A THOROUGHLY practical FOREMAN, is open to an ENGAGEMENT (a carpenter), either as SHOP FOREMAN or FOREMAN of WORKS, having filled both capacities. Good references. No objection to the country. Age 38.—Address, T. L. Mr. Wales, 30, Manor place, Walworth, Surrey.

TO CARPENTERS AND BUILDERS.

A YOUTH, aged 16, wishes to LEARN the above BUSINESS in a respectable Firm.—Address, G. E. 47, High-street, Hampstead.

TO CONTRACTORS.

AN efficient FOREMAN, of extensive experience, in a large establishment in town, a carpenter by trade, is in WANT of a SITUATION. A ready draughtsman, measurer, and estimator. References unexceptionable.—Address, A. B. 5, Crawley-street, Oakley-square, N.W.

TO ARCHITECTS.

AN experienced Assistant and first-class Draftsman, Perspective Draughtsman, and good Colourist, is open to an ENGAGEMENT, in town, as MANAGING ASSISTANT.—Address, A. R. 121, Albany-street, Regent's-park.

TO ARCHITECTS.

AN ASSISTANT, who has a thorough knowledge of Gothic architecture, is desirous of an ENGAGEMENT or would prepare working and detail drawings, &c at his own rooms.—Address, E. L. 60, Norfolk-street, Strand.

AN ARCHITECT and SURVEYOR'S ASSISTANT, of considerable experience, having a good knowledge of ecclesiastical and domestic architecture, and possessing the ability for making perspectives and freehand drawings, taking out quantities, writing specifications, surveying and levelling, and for performing the usual routine of a general practice, wishes to obtain a permanent SITUATION as MANAGING CLERK. He has several times received a higher salary than 150l. per annum, but in consideration of the situation being permanent, would accept that.—Address, H. R 17, 17, Hill street, S.W.

TO ARCHITECTS AND BUILDERS.

A THOROUGHLY Experienced and Practical CLERK of WORKS, who is well versed in every branch of the Building trades, materials, and construction, either class of building or engineering works, can prepare proper detail, and set out any description of work, wants an ENGAGEMENT. Four years' reference and satisfactory testimonials. GENERAL or SHOP FOREMAN to a Builder.—Address, W. T. B. 21, South Molton-street, Oxford-street, W.

TO BUILDERS AND CONTRACTORS

AN active, energetic Man, aged 25, wishes to obtain EMPLOYMENT. Is a joiner and carpenter by trade, or would take a situation as time or storekeeper, being an efficient scholar and writer. Wages not so much an object as a permanency. Town preferred.—Address, B. H. 1, Carlton-road South, Mile-end, E.

A THOROUGHLY practical PAINTER, PAPERHANGER (plain or ornamental), GLAZIER, DISTEMPERER, &c desires EMPLOYMENT. Is fully competent to take charge of work or a business. Town or country. — Address, RESPONSE, 21, Mornington-place, Hampstead-road, N.W.

TO IRONFOUNDERS.

A RESPECTABLE YOUNG MAN is desirous of obtaining EMPLOYMENT in the above trade. Good references.—Address, C. P. Post-office, Oxford.

TO ARCHITECTS.

A FIRST-CLASS ARCHITECTURAL ASSISTANT, aged 20, with twelve years' experience in the profession, desires an ENGAGEMENT. Capable of making working drawings, perspective, &c and understands taking out quantities. Unexceptionable references, &c. — Address, A. B. 32, College-street, Chelsea.

TO PLUMBERS AND BUILDERS

A YOUNG MAN WANTS a SITUATION as PLUMBER, GASFITTER, and PAINTER, town or country.—Address, J. JUPP, 2, Archway-place, Upper Holloway, London.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Estate is within 10 yards only from the Estate, and the City is reached in twenty-five minutes. The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND NOW TO LET at Blackheath, Tottenham, Kings on; some very eligible SITES in the Grove road, Mile end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing. Apply to Mr KNIGHTLEY, Architect, 23, Cannon-street.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE Land tax redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for ninety nine years. For plans, &c. apply by post, pre-paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

EXTENSIVE MANUFACTURING PREMISES, SOUTHWARK.—TO BE LET on LEASE, extensive MANUFACTURING PREMISES, occupying a very large area situate in the Borough-road, Southwark. The buildings, which are very substantially erected, comprise a very large factory of three lofty floors, with basement, a smaller factory of four floors adjoining, a very spacious and lofty ground-floor factory, yard, a capital family residence and offices, two gateway entrances, and three dwelling-houses, fronting the Borough road, Nos 77, 78, and 79, which can be readily let off if desired.—For further particulars apply on the Premises; or to Messrs. FULLER & HORSEY, Billiter-street, Fenchurch-street, E.C

FREEHOLD GROUND between the Forest Hill and Sydenham Stations TO BE LET on long Building Leases.—For plan and particulars, apply to C. F. BEEKS, Esq. Architect, 12, Middle Scotland-yard, S.W.

PHILBROKE ESTATE, at Leytonstone, on the Woodford and Loughton Railway, twenty minutes from Fenchurch and Bishopsgate Stations.—The valuable FREEHOLD ESTATE (land tax redeemed), surrounding the Station, healthy locality, gravelly soil, excellent drainage, water and gas laid down, roads made, and can be dug on the estate, it is proposed TO LET in Plots suitable for building detached and semi-detached villas. Repeated applications have been made for houses in this neighbourhood. For terms, apply to Mr. ATHEY, at the Surveyor's Office, Philbroke Estate, Leytonstone, Essex.

TO BUILDERS, &c.—A PLOT of FREEHOLD BUILDING LAND for SALE, near the New Church, Cottenham Park, Wimbledon; also a PLOT, adjoining the Dunsford Villas, fronting the Merton road, Wandsworth, Surrey, containing nearly one acre each.—For plans, &c. apply to Mr. W. C. FOOLS, 11, Great Smith-street, Westminster, S.W.

EXTENSIVE MANUFACTURING PREMISES, Whitechapel.—TO BE LET or SOLD, together or separately, the extensive and important range of PREMISES, recently occupied as the Whitechapel Distillery, with land adjoining if required. The buildings, many of which are of great extent, are most substantially erected, principally in 1845, and are very conveniently arranged for almost any manufacturing purpose. There are three distinct gateway entrances, and the buildings on all sides are surrounded with paved yards. The total area is about three acres, exclusive of six acres of accommodation land, which may be had if required. There is an Artesian well which affords a constant and unlimited supply of pure water. Further particulars, and cards to view, may be had of Messrs. TENNANT & DARLEY, Solicitors, Raymond's-buildings, Gray's-inn; and of Messrs. FULLER & HORSEY, Billiter-street, E.C. where plans of the property may be seen.

FREEHOLD GROUND TO BE LET, term ninety-nine years.—A most desirable frontage of about 160 feet, for good shops, in a first-class situation, near to the Lark Hall Tavern, Clapham, at a low ground-rent.—Apply to Mr. J. THOMAS, Architect and Surveyor, 10, Denmark street, Camberwell.

SAINT HELEN'S, LANCASHIRE.—TO BE LET, on Lease, the extensive MANUFACTURING PREMISES known as the Ravenhead Copper Smelting Works, situate at St. Helen's, with a wharf on the canal, and a branch of the St. Helen's Railway running through the property. The entire site is about 20 acres, of which about 5 acres are occupied by the works, the remainder being arable and pasture land. The buildings comprise a series of very substantially-erected, light, and lofty ground floor factories, arranged for the purposes of copper and silver smelting works, but they will be available for many other large manufacturing establishments, as they possess the advantage of direct communication by rail or water carriage with all parts of the kingdom. Coals can be obtained from pits in the neighbourhood at an almost nominal price, and labour is cheap and abundant.—For particulars apply to Messrs. FULLER & HORSEY, 12, Billiter-street, London, E.C.; and Messrs. HARRISON & FINCH, 2, Gray's inn, London.

TO BUILDERS and CONTRACTORS.—TO BE LET, SEVENTY-SIX ACRES of LAND, three miles from a station on the South-eastern line, possessing a number of excellent sites for villas, with beautiful views to north and south. Advances if required.—Address, JAMES HAIG, Esq. 4, Old square, Lincoln's inn, London.

TO BUILDERS.—LAND TO BE LET, for building a Public House, Shops, and Houses, on the Main Wandsworth-road, within ten minutes' walk of Clapham-road and Vauxhall Station, and Nine Elms Steam boat Pier.—Apply to H. BATES, The Priory, Wandsworth-road.

LARGE MANSION WANTED, to Rent or Purchase, containing from 30 to 40 rooms, surrounded by a few acres of ground, within 10 miles of London, and near a railway station.—Apply, stating terms, to A. A. care of Davies & Co. Advertising Agents, Finch-lane, Cornhill.

TO BUILDERS and OTHERS.—TO BE LET, several PLOTS of BUILDING LAND, situate in the best part of Stoke Newington, where houses are in great demand. Bricks supplied on the estate at a low price. Sand may be raised on the ground for building purposes.—Apply to Mr. RODDA, at the Estate Office, Bouverie-road, Church-street, Stoke Newington.

GREENWICH.—TO BE LET, by the Drapers' Company, BUILDING GROUND and HOUSES situate near the Railway Terminus, at Greenwich.—Further particulars may be had on personal application, at the Clerk's Office, Drapers' Hall, Throgmorton-street; or of Mr. HERBERT WILLIAMS, Surveyor, 32, Old Broad-street.

FREEHOLD PROPERTY.—Desirable and Safe Investment.—TO BE SOLD, a Substantial MANSION, in thorough repair (with charming inland and sea views), carriage-house and stables, green house, very productive orchard, large fruit and flower garden. Southern aspect for salubrity. Nothing can excel it in the United Kingdom. The property includes a farm-house, detached, let for 52l per annum, with outbuildings, and 15 acres of rich and highly cultivated land. More land can be had in connexion with the above, if required. The only tax charge on this estate is 9d. per annum. Within twenty minutes' walk of a seaport town and an excellent college.—For particulars apply to Mr. JOHN HENNIS, Auctioneer and Estate Agent, St. John's House, Horselydown, Southwark, S.E.

BUILDING LAND TO BE LET, Saville-row, Walworth, Surrey, within five minutes' walk of the Elephant and Castle, contiguous to the Chatham and Dover Railway Station, and abutting on the high road leading from London to Camberwell.—The Fishmongers' Company are prepared to receive PROPOSALS for the whole or any part of their ESTATE, lying between Saville-row and Gloucester-row, the same having been laid out in streets and frontages for the ERECTION of DWELLING-HOUSES, SHOPS, or other BUILDINGS, on a building lease or lease, for eighty years, land-tax redeemed. The streets are formed, the roads and sewers made, footpaths laid and drained, so that the estate is now ready for immediate building operations.—For particulars, in shire of Mr. W. B. TOWSE, the Clerk of the Company, Fishmongers' Hall, London Bridge, and at the Office of Mr. RICHARD TUFF, Architect and Surveyor, 28, Fenchurch-street, where plans and conditions may be seen.

WATFORD, HERTS.—BUILDING GROUND TO BE LET, on building leases.—Several plots of ground, in excellent situations, some fronting the St. Alban's road, and others on the new road about to be constructed from the station into the town. Money can be advanced to builders if required, at moderate rates of interest.—For particulars, apply, personally, to Mr. EDWARD H. BARNELL, Surveyor, 32, Bedford-row, W.C.; or to Mr. ALEXANDER BALDERSTON, Solicitor, 9, Serle-street, Lincoln's-inn.

ARTISTS' STUDIOS.—TO BE LET, at 90l. per annum, a MODERN HOUSE, recently built, containing two lofty Studios, with east light, two Sitting Rooms, Bedroom, Kitchen, &c.; situate but a few paces out of Oxford-street.—N.B. The second floor Studio is let at 45l. rent to a gentleman desirous of remaining. Apply to Mr. HULLAH, 67, Berners-street, W.

BUILDING LAND TO BE LET or SOLD, at Sydenham, near the Church, the Railway Station, the Crystal Palace and Park. It fronts a wide, handsome roadway, and has ample depth for garden grounds. All the houses on the estate are of a good class, and the roads obtained give an average return of 3 per cent. on the outlay. The remaining frontage will be let at a low rent, to secure the ground being speedily covered.—Terms and particulars of Messrs. EDWIN FOX & BOUSFIELD, Land Agents, 41, Coleman-street, Bank, E.C.

ELIGIBLE BUILDING LAND TO LET, on 99 years' Lease; some in Kentish Town, close to intended line of Midland Railway; other close to a railway-station seven miles from town, east. Advances made.—Apply to THOMAS NUNN & SONS, 21, Lamb's Conduit street, W.C.

TO CONTRACTORS, BUILDERS, and OTHERS.—TO BE LET, TWO BRICKFIELDS, yielding a large return and good profit, situate within twenty miles of the metropolis, and within a mile of a railway station.—For particulars apply to Mr. REARDEN, 91 and 92, Piccadilly.

LAYHAM, near HADLEIGH, SUFFOLK. TO BE SOLD by PRIVATE CONTRACT, a BRICK KILN in full trade, with an unlimited supply of capital brick and tile earth, 3 acres of productive arable and 45 ditto of superior pasture land, with barn, shed, and two cottages, all in good repair, lying adjoining the high road, and within 3 miles of the railway station. To brickmakers desirous of a profitable business, the above presents an opportunity not often to be met with.—Particulars can be obtained on application to Messrs. NEWMAN & HARPER, Solicitors; or to Mr. JOHN BOWLER, Auctioneer, all of Hadleigh.

ELLIOTT, BROTHERS, Opticians to the Government, 30, Strand, beg to give notice that they have been compelled to REMOVE temporarily to 47, CHARING CROSS, their late premises being suddenly required by the Charing Cross Railway Company.

PANTILES.—TO BE SOLD, 15,000 PANTILES, delivered at Devonshire-street Station, Great Eastern Railway.—Apply to A. TUCK, Brick and Tile Works, Ingatestone, Essex. Plain Tiles, Chimney-pots, and Moulded Bricks in great variety.

INDIA-RUBBER MILL BANDS, WASHERS for Steam Joints, HOSE PIPES and FLEXIBLE TUBING.
A STOCK OF THE ABOVE ALWAYS ON HAND.

Also as to the Tuning, &c. of Organs in all parts of the country. Church Organs of any size built, enlarged, or removed, as well as removed and WAREHOUSED DURING RESTORATIONS. PRIZE MEDAL, 1851.

HAY'S PATENT WATERPROOF GLUE and INDIA-RUBBER VARNISH.—To ARCHITECTS, BUILDERS, PAPER-HANGERS, &c. &c.—The WATER-PROOF GLUE is a special anti-damp, and is suitable for contractors, joiners, coffin-makers, &c. &c. The VARNISH for damp walls, previous to papering, coating zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Booth, contractors, Gosport:—
"We have repeatedly used your Waterproof Glue as a preventive against damp, and have found it most valuable in preparing walls to receive paper. In one instance, where the walls were thoroughly saturated with moisture from earth filled against the outside, we used your varnish internally, and papered the surface, within a few hours of its being applied, with complete success. We have also used your preparation for coating a large number of cast-iron piles, at the Gunwharf, Portsea, for her Majesty's War Department."
To be had from all Ironmongers, Oil and Colourmen, &c.
Manufactory, Chandos-street, Portsmouth: Mr. GEORGE WEEKS, Manager. GEORGE C. WARREN & CO. General Agents, 19, London-street, London, E.C. where specimens of its application can be seen.

PRIZE MEDAL, 1862.
HAMILTON & CO.
No. 10, GREEK-STREET, SOHO-SQUARE, LONDON, W.
Sole Manufacturers of
C. A. WATKING'S PATENT WIRE-BOUND ROUND and OVAL PAINTING BRUSHES.
Distemper Brushes, Sash Tools, Stippling Brushes, Gilders' and Graiers' Tools.
These goods are made of the best materials and workmanship, and have obtained a high reputation among the chief decorators in the kingdom. Varnish and Colour Manufacturers, Oilmen, Merchants, &c. are supplied on the lowest terms. Price Lists forwarded on application.

NOTICE.—BUILDERS and DECORATORS will find superior and unparalleled advantages in MEAD'S PATENT STAINS, comprising the rich oak, satin wood, wainscot, Spanish mahogany, &c.; they far surpass anything ever seen, and entirely supersede paint for the inside woodwork of dwelling houses, being admirably adapted for the castle, the magnificent hall, the library, the drawing-room, and the miniature cottage; also for church work, panelling and bankers' offices, railway stations, schools, &c. &c.—To be had of T. J. HOGG, 3, Brunswick-place, City-road, E.C.; and at the Works, Abridge, Essex. Price 8s. per gallon. Post orders will have best attention. The above merits special notice. The delicate and beautiful effect given to work finished with them, and great saving in time and expense, are highly appreciated by the most experienced workmen.

PATENT GRAINING APPARATUS.—TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.
One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They are very cheap, and will repay the cost of them in two days' working. They only require a trial, and any person studying his interest would not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 33, High street, Marylebone, London, W.
N.B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post-office order for 22s.

KENT'S PAINTING BRUSHES are all stamped G. B. KENT & CO.
And are manufactured solely by G. B. KENT & CO. at 11, Great Marlborough-street, London, W.
Established 1777.
KENT'S BRUSHES have been celebrated for their superior quality for the last eighty-four years, and may always be depended upon as the best that can be made.

Every article for the Trade at the lowest prices.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

JUROR—Class XXX.
INTERNATIONAL EXHIBITION
1862.

PAPIER MACHE AND CARTON PIERRE WORKS,

49, RATHBONE PLACE, W.

GEORGE JACKSON AND SONS

(Established in 1770)

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic, Elizabethan, Italian, Renaissance, Louis XIV, XV, XVI and many other styles, also rich or simple Panel Decorations, Elizabethan and Gothic Dados, Door Cases, Mouldings of all kinds, and a their varied selection of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Column and Pilaster Caps, all executed in the most style of art.

The large and lengthened experience of GEORGE JACKSON and SONS in decorations of Drawing and Dining Rooms, Libraries, &c. for private houses, or public buildings, many of which they have had the honour of executing under Architects of the highest eminence, enables them with confidence to direct notice to that branch of their business.

Upholsterers and others will find the large variety of Glass Frames, Tables, Cornices, Screens, Candelabra, &c. The large extent of their work, and the recent adoption of steam-power and machinery, enable them to offer very superior advantages in materials and speed; while for design, quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.

This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to dress it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

TWO PRIZE MEDALS OBTAINED at the INTERNATIONAL EXHIBITION—Architects, Contractors, and Builders, before ordering CHIMNEY PIECES, should inspect the Extensive STOCK of ENAMELLED SLATE CHIMNEYPIECES (which, for beauty of design and moderate prices, defy competition), at the ILLANGOLLEN SLAB and SLATE COMPANY'S WHARF, 4, South Wharf road, Praed-street, Paddington, W.

THE CITY of MANCHESTER PATENT BRICK & TILE COMPANY, LIMITED (EFFERTZ'S PATENT). Capital, £50,000, in 10,000 shares of 5l. each. Deposit, 10s. per share on application, and 1l. per share on allotment. Registered under the Companies Act of 1862, with limited liability.

DIRECTORS.
W. NICHOLSON, Esq. Chairman
(late Managing Director of the London and Manchester Glass Company).
W. Routledge, esq (Messrs. Routledge & Ommanney).
F. Hessenier, esq. (Messrs. W. F. Higson & Co.).
E. Tomlinson, esq. (Messrs. Tomlinson & Jones).
E. J. Hughes, esq. (Messrs. Hughes & Bloodworth).
W. Weild, esq. C.E. Queen's Chambers, Market-street.
Charles M'Cunn, esq. Market street.
CONSULTING ENGINEER.—W. Weild, esq. C.E.
SUPERINTENDING ENGINEER.—Peter Effertz, esq. C.E. (the Patentee).
SOLICITORS.—Messrs. Atkinson, Saunders, & Co.
BANKERS.—Messrs. Cunliffe, Brooks, & Co.

The Directors having now completed their preliminary arrangements, and the Company being duly registered, are prepared to receive and execute orders forthwith, both for the machines (under royalty), bricks, tiles, and drain-pipes.
The Directors very confidently invite application for the remaining shares. A considerable number are already subscribed for, and an allotment will be shortly made.
The Directors reserve to themselves the right to limit the first issue of shares.
With machines made under this patent, bricks can be produced superior to hand made, at one half the present prices.
The machines may be seen at work on application. Samples of bricks, tiles, and drain-pipes, can also be seen at the Company's Offices, where forms of application for shares and further information may be had.
E. J. S. HUGHES, Secretary.
India Buildings, Cross-street, Manchester.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.
CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

" " RAMSAY'S GARESFIELD FOUNDRY COKE.
Goods made to Pattern on the Shortest Notice and most Reasonable Terms. Shipping Orders executed with Dispatch.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,

Only, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and lastly, that the "Reports of the Juries," page 581, of the Great Exhibition, note the grant of a First-class Medal and rank the Manufacture as known as long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator

for the admission of Pure Air

THROUGH THE EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants, and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London; and of all respectable Ironmongers, Builders, &c.

HOLLINGSWORTH will SELL by AUCTION, at the SALE ROOMS, 13, High Holborn, on MONDAY next, at TWELVE precisely, the STOCK IN-TRADE of a BUILDERS' IRONMONGER, 12-regular and 1 pit stoves, kitchen ranges, furnace pans, gutters, piping, sash weights, &c.; brass foundry goods, in hinges, locks, latches, taps, door and bell furniture, two tons of nails and screws, two tons of paints and white lead, various colours, and varnishes, three valuable lathes, anvils, files, smiths' and other tools, flooring cramps and screw jacks, iron stable fittings, tramelled mangers, sashes, joists, rafters, iron bars, brackets, &c.; patent shafts, a 2-horse mowing machine, patent plough, 500 iron cattle hurdles, a 3-horse power stationary engine, 3,000 pieces of marble chimney-pieces, tastefully marble and enamelled slate chimney-pieces, and other builder's effects.—On view and catalogues ready to-morrow.—Auction Offices, 13, High Holborn.

Valuable Freehold Building Land, immediately in the rear of the Bank of London, Cushion-court, and Old Broad-street, in the City of London.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer FOR SALE, at the MART, on FRIDAY, MARCH 27th, at TWELVE, a very important and valuable FREEHOLD PROPERTY, situate in the rear of the Bank of London, Threadneedle-street, and comprising the valuable site (which has a frontage of 100 feet) to Cushion-court, Old Broad-street, near to the Stock and Royal Exchange, in the heart of the City of London. It comprises between 9,000 and 10,000 superficial feet, and is admirably adapted for the construction of offices, or exceedingly valuable in connexion with the adjoining premises. The importance and value of the situation may be seen by the splendid buildings, the Consul Marine, the National Bank, and the Imperial Insurance office, which have been recently erected in Old Broad-street, and the difficulty of acquiring land at any price in the immediate neighbourhood.—May be viewed, and particulars had of Messrs. DESBOROUGH, YOUNG, & DESBOROUGH, 6, Size-lane, Bucklersbury; Messrs. UPTON & JOHNSON, & UPTON, Auctioneers; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad street, Royal Exchange

Lot 3.—In Tinsley Park, near Sheffield; 40 numbered oak-trees, 407 oak poles, 16 other poles, 296 oak poles, with the bark, cordwood, and underwood.

In Scholes Coppice Wood, in the township of Kimberworth, near Rotherham:—

Lot 4.—213 Oak Trees of large size, numbered from 1 to 100, with the tops and bark.

Lot 5.—125 Oak Trees, and 2 Beech Trees, of large size, numbered from 101 to 227, with the tops and bark.

Lot 6.—103 Oak Trees of large size, numbered from 228 to 330, with the tops and bark.

All the trees set to be sale in Scholes Coppice Wood are marked and numbered with white paint

Mr. SAMUEL SMITH, the Woodman, will show the timber in Ecclesall Wood; Mr. FRANCIS ATKIN, the Woodman, that in Edlington Wood; Mr. JOHN ATKIN, the Woodman, that in Tinsley Park Wood and Mr. COWTRES, the Woodman, that in Scholes Coppice Wood, which are well adapted for naval purposes. This wood is at a convenient distance from the Masbrough station, on the Midland Railway, and from Swinton station, on the South Yorkshire, Doncaster, & Selby Railway. Further particulars may be had on application to Mr. NEWMAN, of Darley Hall, near Barnsley; Messrs. E. NEWMAN & SONS, of Barnsley; Mr. JOHN COBBAN, of Wentworth; or of Mr. LANCASTER, of Barnsley, Auctioneer.

N.B. The sale will commence precisely at THREE o'clock.

Darley Hall, near Barnsley, March 2nd 1863.

ADDISCOMBE, CROYDON.—Excellent Building Materials.

MR. WHITTINGHAM is instructed to SELL by AUCTION, on the PREMISES, close to the town of Croydon, on MONDAY, MARCH 30th, 1863, at TWELVE for ONE o'clock, the fourteenth portion of the excellent BUILDING MATERIALS of some of the Buildings now being taken down by the Corporation, consisting of about 100,000 stock bricks, a quantity of bats, stone window sills, &c. 2 inch, window sashes, doors, frames, flooring and rooling boards, &c. May be viewed the Saturday prior, and catalogues had; and catalogues may be obtained of the Foreman, on the Estate, and of the Auctioneer, 14, Moorgate street, City, E.C.

In Chancery (without reserve).—About 3,500,000 Bricks, the Plant of Three Brickfields, Ten Horses, Seventeen Waggons and Carts, Harness, Four Ricks of Oats, a Piece of Freehold Land, &c.; Wood-lane, Hounslow; and Halliford, near Sunbury, Middlesex; and Egham, Surrey.

MESSRS. HERON & SONS will SELL by AUCTION, pursuant to directions with which they have been favoured by George Whiting, esq., Chief Clerk to the Master of the Rolls, in causes pending in the High Court of Chancery between James Bennett, plaintiff, and Alice Bennett, widow, and others, defendants; and Ann Elizabeth Burchett, plaintiff, and James Burchett, defendant, on the PREMISES mentioned, on MONDAY, MARCH 30th, 1863, at THREE o'clock precisely, in FOUR LOTS, of about 3,000,000 fine BRICKS, the PLANT of THREE BRICKFIELDS, ten strong and useful horses, seventeen waggons and carts, harness, together with other useful brickmaking implements, four ricks of oats, some farming implements, piece of freehold land, containing about 1a. 1r. 32p. and the leases of the Hallsford and Egham brickfields, which will be sold on the respective premises. The leases may be inspected at the offices of the Auctioneers seven days before the sale, when catalogues of the whole and separate lots, and particulars of the estate, can be had; and may be had of the respective Brickfields; of THOMAS MITTON, Esq. Solicitor, Lincoln's-inn-fields; of Messrs. BINDOW, TUCKER, and HALLETT, Solicitors, No. 1, Bedford-row, London; and of Messrs. HERON & SONS, Auctioneers and Valuers, Uxbridge Middlesex.

NORTH LONDON RAILWAY—CITY TERMINUS.

MESSRS. KENNEDY & BONNY are instructed by the Directors of the North London Railway Company to SELL by AUCTION, on the PREMISES, Liverpool street, E.C. on MONDAY and TUESDAY, MARCH 30th and 31st, at TWELVE o'clock, the first portion of the excellent MATERIALS of about eighty Houses, situate in Broad street Buildings, Peter street, and Sun-street, E.C.: comprising, capital stock bricks, stone, oak and other timbers; great quantities of excellent panelling, cast lead cisterns, and several tons of other lead; office fittings, street and other doors, sashes, battens, floors, ranges, stoves, iron railings, and other valuable and useful items.—May be viewed SATURDAY previous, and Catalogues had at the Offices, 14, Broad-street Buildings, 23, Kingsland road, and Camden Town.

N.B.—The SECOND PORTION will be sold on the 7th and 8th APRIL.—See future advertisements.

BANBURY, OXON.—To Builders, Contractors, Agriculturists, and Others.—Highly important Sale by Auction of first-class Portable Steam-engines, &c.

MESSRS. CLARKE & BARROWS have received instructions to SELL by PUBLIC AUCTION, on THURSDAY next, the 26th day of MARCH (in consequence of a dissolution of partnership, and in contemplation of new and extensive arrangements by Mr. Barrows, the remaining partner), TWENTY valuable and highly-finished PORTABLE ENGINES for Ploughing, Thrashing, Builders' and Contractors' Work, &c.; a 4-horse power fixture engine, six valuable thrashing machines, a set of valuable steam plough tackle, several useful second-hand portable engines and machines, from 2 to 8-horse power, by eminent makers, in perfect working order; saw benches, two patent self-acting mop and brush stall turning machines, to turn stalls up to 13 feet 4 inches diameter, complete; a rounding machine for turning the ends of stalls, capital saw tables, and other useful effects. Luncheon at ELEVEN o'clock, sale to commence precisely at TWELVE o'clock. Catalogues may be had of T. W. BARROWS, at the Works; at the London Depôt, 76, Cannon-street West, E.C.; or of the Auctioneers, 14, Temple-street, Birmingham.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION

Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100l. to 1,000l. upon Freehold and Leasehold property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance by instalments. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or premiums to pay in advance, and no deduction from the loans. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

MONEY TO LEND, at 4½ or 5 per cent.—Mr. GREENWOOD (Firm of Greenwood, Leah, & Co. Surveyors, 30, Great Ormond-street, Bloomsbury, London), can negotiate LOANS for respectable parties, at the above rates, upon personal and other security. Terms moderate. Also large sums may be obtained upon good mortgages.—Apply as above. All transactions are confidential.

TO BUILDERS, WHEELWRIGHTS, and CARPENTERS.—In consequence of the death of Mr. Samuel Terry, the old-established BUSINESS of BUILDERS, WHEELWRIGHTS, and CARPENTERS, hitherto carried on by the firm of "Terry & Son," in the rapidly improving town of Hailsham, in Sussex, is now to be DISPOSED OF. The purchaser will have to take the stock by valuation, and may purchase the premises where the business is carried on, as the same must now be sold. A person of ability and some little capital would be certain to command a first-rate business, as the neighbourhood is excellent, and the business premises are very commodious and handy to the railway terminus.—Application to be made to Mr. H. C. SINNOCK, Solicitor, Hailsham.

TO BE LET, with immediate possession, an Old-established CARPENTER'S BUSINESS, in Surrey. First-rate trade, premises, and references.—Address, A. R. W. Post office, Dorking, Surrey.

TO BRICKLAYERS, BUILDERS, &c.—TO BE DISPOSED OF, a Genuine BUSINESS in the above line. The house and premises are in good repair, and there is every convenience for carrying on a large trade. Twenty-seven miles from London, three from a station on the South-Western Railway.—For further particulars apply to R. B. Printing Office, Chobham, Surrey.

WANTED to PURCHASE, a SHARE of an ARCHITECT'S or any other genteel BUSINESS, which would yield the Advertiser 600l. per annum.—Direct, Full particulars of letters, to Mr. RICHARDS, 91 and 92, Piccadilly. Strict confidence may be relied on

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following extract FROM SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE OF WIGHT.—Second Testimonial:—"March 14th, 1863.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much pleasure, its answers perfectly. Many builders and other persons have lately examined it, and there is not the least doubt in their minds of its being shortly brought into general use, and I am myself about to be adopted generally in the houses that are being erected here."

N.B. For the 1st testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

ROYAL ACADEMY of ARTS. — NOTICE to ARTISTS.—All works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the Royal Academy, must be sent in on MONDAY, the 4th or TUESDAY, the 5th of APRIL next, after which time no Work can possibly be received, nor can any Works be received which have already been publicly exhibited.

FRAMES.—All Pictures and Drawings must be in gilt frames. Oil Paintings under glass, and Drawings with wide margins, are inadmissible. Excessive breadth in frames as well as projecting mouldings may prevent pictures obtaining the situation they otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy. JOHN PRESCOTT KNIGHT, R.A. Secretary.

Every possible care will be taken of Works sent for exhibition; but the Royal Academy will not hold itself accountable in any case of loss, nor can it undertake to pay the carriage of any package.

The Prices of works to be disposed of may be communicated to the Secretary.

THE EXHIBITION of ALUMINIUM and ALUMINIUM BRONZE will OPEN APRIL 1st, 1863, with 2000 SPECIMENS, illustrating the application (Ornamental and Useful), of these interesting Metals will be Exhibited on the Opening of MAPPIN BROTHERS' New Rooms, 222, Regent-street. Admission by Card.

COMPETITIONS.

TO ARCHITECTS.—100*l.* PREMIUM.—A PLAN and ESTIMATE of BUILDINGS to accommodate 300 Pauper Lunatics, of the counties of Cavan and Monaghan, from 220 to 230 in a main building, from 70 to 80 in detached cottages containing accommodation for from 35 to 40 patients each; suitable INFIRMARIES contiguous to the main building, a HOUSE for a Medical Superintendent, the necessary Offices for the building, and for a Farm of 40 statute acres, Workshops, &c. walls or a ha-ha to the exercise ground, yards and garden, and a boundary wall or other suitable fence to the farm grounds, for the lowest sum compatible with neatness of style and thorough attention to the most approved details in workmanship and fittings. One Hundred Pounds will be given for the Plan which shall be judged to be the best by the Committee, unless the Architect whose plan it is shall be employed to carry out the work. The Plan to be the property of the Committee. The Committee will not bind themselves to employ the designer of the best plan to carry out the Works, though their desire will be to do so. The law vests the final decision as to the adoption and the carrying out of any Plan with the Board of Control. This body may naturally, however, be expected to yield to any reasonable wishes on the part of those locally interested, and it has already waived its right of appointing an Architect in favour of the Committee, provided he be a person of acknowledged ability and standing in his profession. Papers setting forth more fully the views of the Committee, the building resources generally of the neighbourhood, and a description of the site, with a plan and sections of the grounds, will be sent by post to applicants, and every information given on the ground to those Architects who may wish to inspect it, by the Secretary to the Committee. Plans must be sent for consideration, to the "Secretary to the Building Committee of the Lunatic Asylum, Monaghan," on or before the 25th day of JULY next. An invitation will be sent to those Architects whose plans are most approved of to attend, if they should wish to do so, on a fixed day, for conference with the Committee.

9th March, 1863.

TO SCULPTORS.—The Executive Committee of the Oastler Monument will be glad to receive DESIGNS and PROPOSALS from sculptors, for a MONUMENT to the late Richard Oastler, which is to be erected in Bradford. The statue is to be placed upon a pedestal, in a speaking attitude, and to have, at the base, small figures of factory children supplicating the great philanthropist to redress their grievances. The cost of the Statue, which is expected to be colossal, is not to exceed 1,000*l.* and the design must approved will have the preference of the committee. The committee are open to receive a DESIGN for a FIGURE, in marble, under a Gothic canopy, with groups of factory children in bas-relievo on the pedestal. Communications may be addressed to W. WALKER, Esq. Belling Hall, Bradford, the Chairman of the Executive Committee

Bradford, March 4, 1863.

BILLING'S PATENTS.
CHIMNEY TERMINALS, THROAT VALVES.
NOTICE to ARCHITECTS.—The Proprietors of the late Mr. Billing's Patents have secured the services of Mr. H. H. COLLINS, M.I.B.A. of No. 10, Poultry, E.C. as the Consulting Architect, from whom full particulars and the reduced prices may be obtained; or from the Manager, Mr. TYLER, 19, Abingdon-street, Westminster, S.W.

CONTRACTS.

TO BUILDERS and MASONS willing to TENDER for BUILDING a DETACHED VILLA at Bletchingley, near the Reigate Station.—Can inspect the drawings and specification at the Office of the Architect, who reserves the right, on behalf of the freeholder, of rejecting the lowest or any Tender. Persons tendering will have to be provided with security for the fulfilment of the works. Tenders to be delivered on TUESDAY, the 7th of APRIL, at FOUR o'clock punctually.

HENRY McCALLA, C.E. Architect,
Offices—Reside-road, Eastbourne, Sussex, and
25, Westbourne-place, Eaton-square, S.W.

TO CONTRACTORS. — CONCRETE BRICKWORK and MASONRY.—The Oxford Paving Commissioners are prepared to receive TENDERS for CONSTRUCTING a BRICKWORK OPEN INVERT, along the portion of Trill Mill Stream, from the point where the present Invert ends, at the Tan Yard, St. Ebbe's, to Swan Island, in the City of Oxford. The plans, section, drawings and specification of the required Works, and the general conditions of the Contract under which the Works are to be done, may be seen daily between the hours of TEN and FOUR, at the Office, No. 7, St. Aldate-street, Oxford, of Mr. CALPIN, the Surveyor to the Commissioners. Tenders are to be made on a printed form, which may be had of the Surveyor or the Clerk to the Commissioners, and are to be delivered, sealed, at my Office, No. 4, St. Giles-street, Oxford, on or before MONDAY, the 6th of APRIL next. The Commissioners do not bind themselves to accept the lowest or any Tender

FREDERICK J. MORGELL, Clerk to the Commissioners.

St. Giles's, Oxford, 18th March, 1863.

BURNHAM GAS COMPANY, Limited. Persons willing to CONTRACT with the Directors of the Burnham Gas Company, Limited, for the ERECTION of New GASWORKS at Burnham, in the County of Essex, may see the plans and specifications on application to the Secretary, or at the Office of Mr. JABEZ CHURCH, Civil Engineer, Chelmsford. The work is to be Tendered for in the two following Contracts, viz.

CONTRACT No. 1. The Builders' Work.
CONTRACT No. 2. The Ironwork, Mains, and Apparatus

Sealed Tenders for the respective Contracts are to be delivered at the Engineer's Office, Chelmsford, on or before the 3rd day of APRIL, 1863. The Directors do not bind themselves to accept the lowest or any Tender.—By order,

W. HAWTHORN, Secretary.

Gas Company's Office, Burnham, March 20th, 1863.

PLUMSTEAD, Kent.—To BUILDERS.—TENDERS are required for the ERECTION and COMPLETION of a detached DWELLING-HOUSE, to be built at Whitworth-road, near Shooter's-hill, Plumstead, Kent, for Mr. STONE. Drawings and specifications may be seen at the Offices of Messrs. W. GORING & SON, Surveyors, 82, Wellington street, Woolwich.—Tenders to be sent in on SATURDAY, 4th APRIL. Mr. STONE does not bind himself to accept the lowest or any Tender.

ROADS. — TENDERS are wanted for MAKING a ROAD at Ealing. Plans and specifications to be seen at Mr. WINTER'S House, Castlebar hill, Ealing. Tenders to be delivered to F. F. MARSHALL, Esq. Architect, Tottenham, N. by FRIDAY, APRIL 3rd, 1863.

EXTENSION of TIME for RECEIVING TENDERS.—To BUILDERS.—Persons desirous of TENDERING for the ERECTION of a MANSION, at Saltburn-by-the-Sea, may inspect plans, specifications, &c and obtain bills of quantities, at the Office of Mr. CUTHBERT BRODRICK, 2, Park-place, Leeds, on and after MONDAY, APRIL the 6th. Bills of quantities may also be obtained at the Office of Mr. BALAM, Surveyor, 10, Buckingham street, Strand, London, W.C. Tenders are to be delivered to the Architect, to the above address, not later than MONDAY, APRIL the 13th. The lowest Tender will not necessarily be accepted, Saltburn is about five miles from Redcar, in the North Riding of Yorkshire

14, Buckingham-street, Strand, London, March 11, 1863.

STOCKTON and DARLINGTON RAILWAY.—To BUILDERS and GAS CONTRACTORS.—The Stockton and Darlington Railway Company will receive TENDERS for the CONSTRUCTION of GASWORKS for Saltburn and Marske, including the excavations for, and erection of retort house, chimney, gasholder-tank, and the laying of the mains, &c. Plans and specifications may be seen on application at Mr. JOHN DUNNING'S Office, Bath-street, Middlesbrough. Tenders to be delivered at the Railway Office, Darlington, on or before THURSDAY, the 9th day of APRIL, 1863. The Company do not bind themselves to accept the lowest or any Tender.

THOS. MAC NAY, Secretary.

Darlington, March 21st, 1863.

CONTRACTS.

TO BUILDERS willing to TENDER for doing sundry REPAIRS and ALTERATIONS to a HOUSE near Victoria-gate, Hyde Park. Can inspect the drawings and specification at the Office of the Architect, on and after WEDNESDAY, the 1st of APRIL. Tenders are to be delivered on MONDAY, APRIL 6th, at FOUR o'clock punctually. A right is reserved of rejecting the lowest or any Tender. HENRY McCALLA, C.E. Architect.

Office, 25, Westbourne-place, Eaton-square, S.W.

TO CONTRACTORS and OTHERS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for the CONSTRUCTION of the following SEWERS, in the parish of Clapham, viz.:—About 4,620 feet of 3 feet 9 inches by 2 feet 6 inches Brick Sewer, 3,155 feet of 3 feet by 2 feet Brick Sewer, and 1,370 feet of 2 feet 3 inches Brick Barrel Sewer; and also for the EXCAVATING for, and LAYING of, about 5,150 feet run of STONEWARE PIPE SEWERS, of various sizes (the pipes for which will be supplied by the Board). The specification, plans, and sections, may be seen, and all further information obtained, at the Office of Mr. JOHNSON, Surveyor, Manor Cottage, Larkhall-lane, Clapham, between the hours of NINE and FOUR.—Tenders are to be sent in under seal to the Board as below, on or before TUESDAY, the 21st APRIL next, and are to be endorsed "Tender for Sewers." Persons tendering must be in attendance at the Offices of the Board, on WEDNESDAY, the 22nd APRIL, at FOUR o'clock p.m. when the Tenders will be opened. Security will be required for the due performance of the contract. The Board do not bind themselves to accept any Tender.—By order of the Board of Works for the Wandsworth District,

ARTHUR ALEX. COBB-ELLIS, Clerk to the Board.

Battersea-rise, Wandsworth, S.W. March 23, 1863.

TO BUILDERS.—Persons desirous of giving in TENDERS for the ERECTION of a RECTORY HOUSE at Titchwell, in the county of Norfolk, may see the plans and specification at the Globe Hotel, King's Lynn, from APRIL 6 to APRIL 11; and at Titchwell Rectory from APRIL 13 to APRIL 18 next.

Cheltenham, 1863 JOHN MIDDLETON, Architect.

TO BUILDERS, MASONS, and OTHERS. The Edmonton Local Board of Health will be prepared at their meeting, on the 17th day of APRIL next, to receive TENDERS for the execution of the undermentioned WORK, viz. To provide, square, and properly lay down in Portland Cement, about 50 square yards, best 2½ inch thick York Stone Paving, of the width required, and as and where directed by the Surveyor, Mr. ROBERT GOSSET, F.R.I.B.A., of whom further information may be obtained.—Tenders, sealed, and indorsed "Tender for Paving," to be addressed to the Clerk to the Board, Edmonton, not before the 13th day of APRIL next. The party contracting will be required to give sufficient security, to be approved by the Board, for the due performance of the contract. The Board do not bind themselves to accept the lowest or any tender.—By order of the Board,

WILLIAM PULLEY, Clerk to the Board.

Edmonton, March 24, 1863.

TO STAIRCASE HANDS. TENDERS are required for the STAIRCASES and RAILS to two houses at the Kings-road end of Oakley-street, Chelsea, labour and materials.—Apply to the Foreman. The lowest Tender will not necessarily be accepted.

SOUTH-EASTERN RAILWAY.—TENDERS for CARRIAGES, WAGGONS, &c.—The Directors of this Company are prepared to receive TENDERS for the SUPPLY of—

71 First-class Carriages.
56 Second ditto.
31 Third ditto.
29 Horse Boxes.
22 Carriage Trucks.
22 Break Luggage Vans
10 Luggage Vans
200 Open Goods Waggons.
25 Enclosed ditto.
25 Timber Trucks.
230 Ballast Trucks.

Drawings and specifications, with forms of Tender, may be inspected and copied, on and after the 6th APRIL, at the Station Master's Office, Bricklayers' Arms Railway Station, Old Kent-road, London, and any further information may be obtained, on application to the Company's Carriage Waggon Superintendent, Ashford, Kent. Sealed Tenders, endorsed "Tenders for New Carriages or Waggons," to be delivered to the undersigned, on or before TEN a.m. on WEDNESDAY, the 22nd APRIL next. S. SMILES, Secretary.

London Bridge Terminus, March 26, 1863.

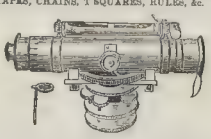
Samples, Testimonials, &c. &c. may be had on application, or by letter to "The Works," or of KENWAY & CO. 15, Mark-lane, City, E.C.
Every cask or can sent out bears the registered Brand of the Firm, without which they will not guarantee it to be of their manufacture

PRIZE MEDAL, 1862.
HAMILTON & CO.
No 10, GREEK-STREET, SOHO-SQUARE, LONDON, W.
Sole Manufacturers of
C. A. WATKINS'S PATENT WIRE-BOUND ROUND and OVAL PAINTING BRUSHES.
Distemper Brushes, Sash Tools, Stippling Brushes, Gilders' Cushions, Tools.
These goods are made of the best materials and workmanship, and have obtained a high reputation among the chief decorators in the kingdom. Varnish and Colour Manufacturers, Oilmen, Merchants, &c. are supplied on the lowest terms. Price Lists forwarded on application.

NOTICE. — BUILDERS and DECORATORS will find superior and unparalleled advantages in MEAD'S PATENT STAINS, for staining the rich oak, satin wood, walnut, Spanish mahogany, &c; they far surpass anything ever seen, and entirely supersede panelling in the interior woodwork of dwelling houses, being admirably adapted for the castle, the magnificent hall, the library, the drawing-room, and the miniature cottage; also for church work, for halls, publishers' offices, railway stations, schools, &c.—To be had of T. J. HOGG, 3, Brunswick place, City-road, E.C.; and at the Works, Aldshot, Essex. Price 8s. per gallon. Patterns will have best attention. The above prices include the chests and beautiful effect given to work finished with them, and great saving in time and expense, are highly appreciated by the most experienced workmen.



TEN THOUSAND POUNDS READY to be ADVANCED by the TEMPERANCE PERMANENT LAND and BUILDING SOCIETY on Freehold or Leasehold Property, for any period of years not exceeding fifteen, the mortgage being repayable by equal monthly instalments. Interest in addition to a small premium of 5s. per cent. on the balance each year. Apply to HENRY J. PHILLIPS, Secretary. Offices, 54, Moorgate-street, London, E.C.—Note. 220,000l. have been advanced upon HOUSE property alone.

MONEY.—IMMEDIATE CASH ADVANCES MADE ON
FREEHOLD, LEASEHOLD, and COPYHOLD PROPERTY
TIMBER, WINE, and SPIRIT WARRANTS,
BANKRUPTCY and INSOLVENCY CASES CONDUCTED.
Balance-sheets Prepared, and Meetings of Creditors Convened
Mr. RICHARD CROSSLEY, ACCOUNTANT and BUSINESS AGENT,
17, Moorgate-street, Bank, London.

MONEY TO LEND, at 4½ or 5 per cent.—Mr. GREENWOOD (Firm of Greenwood, Leah, & Co. Surveyors, 37, Great Ormond-street, Bloomsbury, London), can negotiate LOANS at the above low rates for 3, 5, 7, or 10 years, upon personal and other securities. Terms moderate. Also large sums may be obtained upon good mortgages. Apply as above. All transactions are confidential.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the
MUTUAL LOAN FUND ASSOCIATION
Incorporated by Act of Parliament, 1859, 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advances can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.
AUSTIN'S IMPROVED PATENT SASH and BLIND LINES
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses in Town and Country.
ESTABLISHED 1774

TO IRONMONGERS, BUILDERS, &c.

TEMPORARY IRON BUILDING for SALE.—The Metropolitan Board of Works hereby give Notice that they are prepared to receive OFFERS for the Purchase of an Iron Building of the following dimensions, viz. 70 feet by 24 feet, and 12 feet to the roof plate. The building was erected by Messrs. Benning for the purpose of testing gas meters, and is situate in the New Southwark-street, and may be viewed any day between NINE and TEN o'clock in the forenoon. The Meter Testing Office in Castle-street, is adjoining. The Tenders are to be addressed to the Clerk of the Board, at this Office.
JOHN POLLARD, Clerk of the Board.
Spring-gardens, 26th March, 1863

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, WITH RACK AND WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

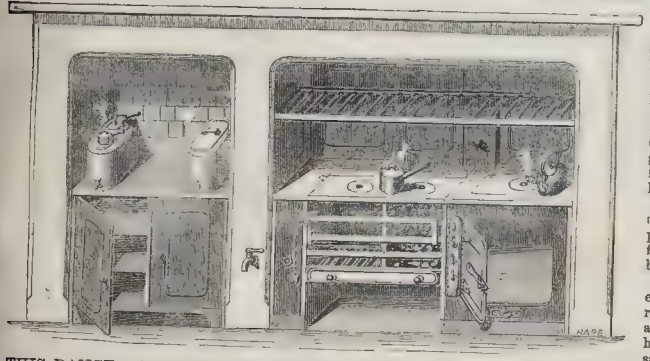
PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.



ILLUSTRATED LISTS ON APPLICATION TO

ST. PANCRAS IRON WORK COMPANY.

OLD SAINT PANCRAS ROAD, LONDON, N.W.

CUNDY'S

PATENT BRICK OVEN WINDING CHECK SEMI-CLOSE KITCHEN RANGE.

This Range will be found very superior to the close Range now in use, inasmuch as it combines the cleanliness of a close kitchener with the perfect ventilation of an open range.

The fall-down bar will be found useful for broiling purposes when the fire is low.

The Ventilator in the Oven Chimney, and also the Register, can be kept open without diminishing the efficiency of the range, thereby entirely removing the great objection and discomfort of all other close ranges, namely, the sulphurous and excessive heat in the kitchen, and the smell of cooking all over the house.

The great advantage of a brick oven is, that it absorbs the steam given out by bread or meat in the process of baking; consequently the latter is totally free from the disagreeable flavour too evident in meat baked in an iron oven.

As the fire of this range can be diminished or enlarged at pleasure, it can (when not in use for roasting) be wound up within 6 inches of the oven, and still be used for baking, also for boiling upon the hob over the oven, thereby effecting a considerable saving of coals.

THIS RANGE,—ALSO CUNDY'S PATENT BRICK OVEN DOUBLE FALL-DOWN BAR KITCHEN RANGE, and CUNDY'S PATENT COTTAGER'S KITCHENER,—can be seen in operation at the Show Rooms of THE MANUFACTURER,

WILLIAM ADDIS,

WHOLESALE AND RETAIL IRONMONGER, AND STOVE, GRATE, AND RANGE MANUFACTURER,

6, 7, and 15, LEICESTER STREET, LEICESTER SQUARE,

Where Mr. CUNDY can be gratuitously consulted, personally, or by letter, relative to the cure of Smoky Chimneys.

15, Gate-street, Lincoln's Inn Fields, W.C. AND 4, MARKET STREET, MANCHESTER.

IMPROVED REVOLVING SHUTTERS.

FRANCIS & CO.

Having made GREAT IMPROVEMENTS in the MANUFACTURE of WOOD or IRON REVOLVING SHUTTERS, are enabled to supply the Public at the following REDUCED PRICES:—

WOOD REVOLVING SHUTTERS, with all requisite Gearing complete, from 2s. per Foot. IRON REVOLVING SHUTTERS, with all requisite Gearing complete, from 3s. per Foot. Suitable for Banking Houses, Public Buildings, Offices, Shop Fronts, and Private Houses. BRASS DRAWN SASH-BARS, and BRASS STALL-PLATES, at a Great Reduction in Price.

ILLUSTRATED PROSPECTUSES AND TESTIMONIALS FREE BY POST ON APPLICATION AT 84, GRAY'S INN LANE, HOLBORN, LONDON.

SNOXELL & CO.'S PATENT REVOLVING SHUTTERS IN IRON OR WOOD,

GUARANTEED;

AND BLIND MAKERS.

96, REGENT STREET, W.; MANUFACTORY, 35, OLD STREET, E.C.

TO BUILDERS and CONTRACTORS.—TO BE DISPOSED OF, in a good town near London, with considerable connexions, with a comfortable house and premises for carrying on the BUSINESS in all its branches.—For particulars, apply to Mr. SANBURY, 9a, Blackfriars-road, London

TO IRONMONGERS and GASFITTERS. TO BE SOLD, the GOODWILL, FIXTURES, &c. of an IRONMONGERS BUSINESS, in a capital situation, in Kensington. The entire or part of the new and well-selected stock may be taken or not. A lease would be granted to an approved tenant at a low rent.—Apply to J. FURRELL, Esq. Solicitor, No. 8, Argyll-road, Kensington, W.

TO BE LET, an Old-established CARPENTER's, Upholsterer's, and Undertaker's BUSINESS, about five miles from London, Thirty-one years' unexpired lease, at a low rental. The house and premises just put in substantial and decorative repair; gas over the house and shop, &c. Large workshops, stabling, &c. &c. Lease and goodwill, £80l.; timber, stock, and fixtures, &c. at a valuation.—For cards to view apply by letter to A. B. 7, Upper-terrace, Upper-street, Islington.

TO BUILDERS and OTHERS.—TO BE SOLD, with immediate possession, close to Kennington Green, a desirable and increasing BUSINESS in the above line. Returns for the last three years, between 5,000l. and 6,000l. Premium, 75l. Stock at a valuation.—For further particulars apply to Mr. BRAY, Estate Agent, 16a, King's-road, Bedford-row, W.C.

ELLIOTT, BROTHERS, Opticians to the Government, 30 Strand, beg to give notice that they have been compelled to REMOVE temporarily to 47, CHARING CROSS, their late premises being suddenly required by the Charing Cross Railway Company

INDIA-RUBBER MILL BANDS, WASHERS for Steam Joints, HOSE PIPES and FLEXIBLE TUBING.

A STOCK OF THE ABOVE ALWAYS ON HAND.

JAMES LYNE HANCOCK,

VULCANIZED INDIA-RUBBER WORKS, GOSWELL-MEWS, GOSWELL-ROAD (opposite Spencer-street), LONDON, E.C.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator

for the admission of Pure Air

THROUGH THE EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d. These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London; and of all respectable Ironmongers, Builders, &c.

VIEILLE MONTAGNE ZINC.

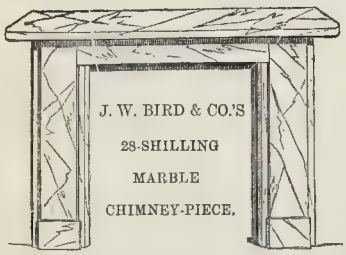
THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge. OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

BATH STONE OF THE BEST QUALITY.

PICTOR & SON, Quarry Proprietors and Stone Merchants, Bath.



Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

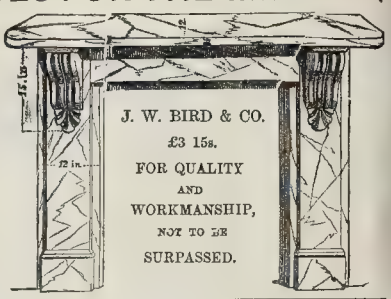
BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

MARBLE & STONE CHIMNEY-PIECES FOR THE MILLION.

PRICE LIST ON APPLICATION.



A Stock of 500 always to choose from at

J. W. BIRD & CO.'S, THE EMPORIUM,
145 & 143½, EUSTON ROAD, N.W.

A Marble Box Chimney, with 8-inch piers, as illustrated, for 28s. and fitted to any opening up to 3 feet square.

STONE DITTO, WITH BEAUTIFUL MOULDED CAPS, FOR SEVEN SHILLINGS.

Monuments and Tablets in great variety, equally low in price.
Masons' Work of all kinds contracted for and executed with despatch, in Town or Country.
A VACANCY FOR AN OUT-DOOR APPRENTICE.

AMUSEMENTS FOR THE EASTER HOLIDAYS.
Next Week, with 24 large Illustrations, Quarto, price One Guinea,

LISPINGS FROM LOW LATITUDES;

Being an ILLUSTRATED JOURNAL of a TOUR TO THE EAST. By the HON. IMPULSIA GUSHINGTON. Edited by LORD DUFFERIN.
JOHN MURRAY, Albemarle-street.

PRACTICAL MECHANICS' JOURNAL.
APRIL Part 181. Being the first part of a new volume Price 1s. Illustrated with a large Engraving of the Steam Travelling Crane for the Royal Gun Factories at Woolwich, by John Anderson, Esq. C.E. and Thirty Woodcuts. Contents:—
The Supply of Water to Cities. Venice. Illustrated.
Production of Oxygen Gas.
Steam Travelling Cranes. Illustrated.
The Furniture of Paradise. Illustrated.
Chemical Separation of Silk and Wool.
Minerals. Rules of Design.
Ice-making Machinery. Illustrated.
RECENT PATENTS.—Law & Duff, Spinning; Falkiner, Permanent Way; Hotchkiss, Projectiles; Dyrtrom, Pyrometers; Bergendal, Armour Plates.
LAW REPORTS OF PATENT CASES—Beadel *v.* Howard, Steam Ploughs; Peale *v.* Miller, Veneer Sawing; Davenport *v.* Jephson, Chain-cable Fabrics.
Reviews, Correspondence, Scientific Societies, Marine Memoranda, Monthly Notes, Lists of Patents and Designs.
London: LONGMANS;
Editor's Offices (Offices for Patents), 17, Lincoln's Inn fields.

DWELLINGS OF THE WORKING POPULATION.
THE SOCIETY for IMPROVING the CONDITION of the LABOURING CLASSES has published the following WORKS, which may be obtained at the Office, 21, Exeter Hall, Strand: "The Dwellings of the Labouring Classes, their Arrangement and Construction, with Descriptions, Plans, &c. of existing Model Houses, and designs for Dwellings adapted to Towns as well as Agricultural Districts." "The Model Cottages of the late Prince Consort, and of the Windsor Royal Society."
By HENRY ROBERTS, Esq. F.S.A.
Fifth Thousand, enlarged edition, price 4s. cloth.
"Home Reform; or, What the Labouring Classes may do to Improve their Dwellings." "An Address to Working People." Third Thousand, price 2d. "The Physical Condition of the Labouring Classes, resulting from the State of their Dwellings and the Beneficial Effects of Sanitary Improvement in Liverpool and in England."
By HENRY ROBERTS, Esq. F.S.A. Price 2d.
Working Drawings on a large scale, with specifications, &c. for Agricultural Labourers' Cottages, and for Dwellings adapted to Towns or Villages. Each design complete on one sheet. Price 2s.

Second edition, demy 8vo 10s. 6d.
A HOUSE for the SUBURBS: Socially and Architecturally Sketched.
By THOMAS MORRIS.
With illustrative Designs.
"Necessary and interesting to all who would fix the position of, dispose the ground, successfully build or occupy with full enjoyment, a suburban house."—*Builder.*
London: SIMPKIN, MARHALL, & CO.

TWISDEN'S MECHANICS.—NEW AND CHEAPER EDITION.
Just published, in crown 8vo. price 10s. 6d. cloth.
ELEMENTARY INTRODUCTION to PRACTICAL MECHANICS, Illustrated by Numerous Examples. Being the Second Edition, thoroughly revised, of "Elementary Examples in Practical Mechanics."
By the Rev. JOHN F. TWISDEN, M.A. Professor of Mathematics in the Staff College.
London: LONGMAN, GREEN, & CO. 14, Ludgate-hill.

CHEAPER EDITION OF CRESY'S CIVIL ENGINEERING.
In One Volume, with above 3,000 Woodcuts, price 42s.
ENCYCLOPÆDIA of CIVIL ENGINEERING, Historical, Theoretical, and Practical.
By EDWARD CRESY, Architect and Civil Engineer.
New Impression.
"A desideratum in engineering sciences is supplied by this remarkable volume. There is not a member of the profession, from the most eminent civil engineer to the humblest surveyor, who will not find here the materials to enrich his mind and extend his knowledge."—*Railway Gazette.*
London: LONGMAN, GREEN, & CO. 14, Ludgate-hill.

The Fourth Edition, in One Volume 8vo pp. 1,104 illustrated with 1,642 Engravings on Wood by B. Branston, from Drawings by J. S. Gwilt, price £2*l.* cloth,
GWILT'S ENCYCLOPÆDIA of ARCHITECTURE, Historical, Theoretical, and Practical. Comprising—

I History of Architecture.
1. Origin of Architecture.
2 Architecture of various Countries
3. Architecture of Britain.
II. Theory of Architecture.
4 Construction.
5. Materials used in Building
6 Use of Materials
7. Medium of Expression.
III. Practice of Architecture.
8. Principal Parts of a Building.
9. Combination of Parts.
10. Public Buildings.

With a Supplement on Gothic or Pointed Architecture, its Periods, Styles, &c.; a Glossary of Terms used by Architects, including an Alphabetical List of the principal Architects of all Times and Countries and their Works, and a Catalogue of the most useful Works on Architecture; and a copious Index.

"It should be possessed and used by every architectural student."—*Builder.*
London: LONGMAN, GREEN, & CO. 14, Ludgate-hill.

Continuation of ILLUSTRATED CATALOGUE and THREE BEAUTIFUL LINE ENGRAVINGS
THE ART-JOURNAL for APRIL (price 2s. 6d.) contains Three Line Engravings—viz. "Barbara's Dirge," engraved by D. Deuchars, from the picture by J. Noel Paton, R.S.A.; "Venice—the Bridge of Sighs," by J. C. Armytage, after J. M. W. Turner, R.A.; and "Philadelphia," by J. Cousen, after Thomas Allom. Also, the thirteenth portion of the Illustrated Catalogue of the International Exhibition, in which are comprised specimens of carved Florentine picture frames, Viennese carved bedsteads, English and Foreign porcelain and bookbinding, glass mosaics, carved clocks of Viennese workmanship, floor cloths, cabinet furniture, &c. &c. The literary contributions include:—"A History of the China Works at Chelsea," by Llewellyn Jewitt, F.S.A. illustrated; "Philadelphia," by J. C. M. Bellew; "History of Caricature and of Grotesque in Art," by Thomas Wright, F.S.A. illustrated by F. W. Fairholt, F.S.A.; "The Goldsmith's Art;" "Castellani's Jewels;" "Plains, Table Lands, Hills, and Valleys," by Professor Anster, F.R.S.; "Natural History," illustrated; "Decorated Bronze;" "British Sculpture;" "Photographs of the Sculpture of the Great Exhibition;" "The Machinery employed in Art Manufacture," by Robert Hunt, F.R.S.; "Notabilia of the International Exhibition," &c. &c.
London: JAMES S. VIRTUE, 26, Ivy-lane.

Now ready, printed on good paper,
THE USEFUL WEATHER GUIDE FOR FARMERS, GARDENERS, SAILORS, &c.
One dozen copies sent free by post on receipt of one penny stamp, addressed to T. ROBERTS & CO. 8, Crane-court, Fleet-street, London.

FOR SALE, at half-price, in good condition, bound in the usual covers, the first 7 vols. of "The Builder" (1843 to 1859), and two following vols. unbound. Also, cheap, Goodwin's Rural Architecture, 2 vols.; Hunt's Parsonage House, and Architectural Campesire; Parker's Villa Rustics; and other books, the property of a gentleman going abroad.—Can be seen at 31, Merrick-square, S.E.

In 8vo. with Plate, price 15s. cloth.
BRITANNO-ROMAN INSCRIPTIONS, with Critical Notes.
By the Rev. JOHN M'CAUL, LL.D. President of University College, Toronto.
London: LONGMAN & CO. Toronto: H. ROWSELL.

BUILDER'S PRICE LIST BOOK, 1863.
Price 2s. 6d.
WILLIAM DAWBARN & CO. Liverpool, have now ready their Builder's Price List Book for 1863, containing the prices of all Building materials, timber, slates, iron-ware, tiles, stone, glass, &c. &c. made up and corrected to the present date. The book contains sundry designs and useful calculations for builders generally.
The price is 2s. 6d. to those who have no account open with W. D. & Co.; but persons desirous of opening an account, on giving satisfactory references, can have a copy posted free.
Prices current of Timber and Deals are issued monthly, and may be had on application.

NOW READY.
THE ENGINEER'S POCKET REMEMBRANCER; giving Data, Rules, and Formulæ. 3s. 6d. Applicable to Civil, Mechanical, Marine, Hydraulic, Lighthouse, Telegraphic, and Railway Engineering, Surveying, &c.
By F. CAMPIN, C.E.
Publishers, ATCHLEY & CO 106, Great Russell-street, London.

THE VILLAGE CLOCK.—A serviceable, well-made, and warranted TURRET CLOCK, to go eight days and strike the hours, for Forty Guineas; not to strike, from Fifteen to Twenty Guineas; adapted for the village church or school.

INTERNATIONAL EXHIBITION.
A sample of the Forty-Guinea Village Turret Clock may be seen in action and striking, with dial and bell complete. Also a sample Turret Clock, from Fifteen to Twenty Guineas, suitable for school or stable, in Class 15, No. 3,245.
JOSEPH FAIRER,
Turret Clockmaker to Her Majesty's War Department,
188, St. George-street East, London.

DENT, CHRONOMETER, WATCH, and CLOCK MAKER to Her Majesty and H.R.H. the Prince of Wales, and
MAKER OF THE GREAT CLOCK FOR THE HOUSES OF PARLIAMENT,
Invites attention to the superior workmanship and elegance of design of his extensive Stock of Watches and Drawing-room Clocks.

Ladies' Gold Foreign Watches	8	Guineas.

Ladies' or Gentlemen's Gold English Lever Watches	16	,,
Strong Silver Lever Watches	5	,,
Gentlemen's Gold Compensation Balance Watches	40	,,
Do. Silver do.	25	,,
Marine Chronometers	25	,,

Gold and Silver Pocket Chronometers, Astronomical, Turret, and Bracket Clocks, of every description. An elegant assortment of London-made Fine Gold Albert and Guard Chains, &c.
DENT, 61, Strand (adjoining Coutts's Bank); 34 and 35, Royal Exchange; and at the Clock and Marine Compass Factory, Somerset Wharf, Strand, London.

The Builder.

VOL. XXI.—No. 1051.

The Architectural Exhibition; and Conversazione.

ON Wednesday evening, the galleries of the architectural societies in Conduit-street were opened for the conversazione; and the Exhibition may now, and till the 30th of June, be visited by the public. The announcement being somewhat late, attendance of the leading members of the profession was not equal to what it has been on previous occasions, but included as many ladies and gentlemen as the space, somewhat crowded by the screens and additional objects exhibited, could conveniently accommodate. In the course of the evening, the claims of the Exhibition on public notice were advocated by Mr. Ashpitel, who also drew attention to the lectures, the first of which, by Professor Kerr, will be given on the 8th of May. The drawings on the walls and screens amount to 424 numbers in the catalogue; but many exhibitors include in a single frame a large number of their works, such as they have designed and superintended during a period of years. Several of these drawings were in the International Exhibition; but generally, all of this class are better seen in Conduit-street; and they materially assist an object that hitherto has been pursued under difficulties, that of making the collection representative of the actual state of architecture: albeit still, the pursuit is kept up with a considerable interval of distance; whilst it is not less obvious than hitherto, that the architects who are doing most, are precisely those who find it most difficult to have exhibition drawings prepared. Perhaps, however, those architects do not take the view of the importance to them of exhibition, that they should take; and we certainly contend that they ought to co-operate towards awakening the public attention, and familiarizing the eye and mind with the art which may be in architecture as practised, even whilst the capabilities of *drawing* are at a long distance in the rear of those of the thing itself—architecture as in positive building. Besides the drawings in the Exhibition, there are the average number of specimens of materials, building-contrivances, and art-manufactures. To these, the north and east galleries are devoted exclusively. In addition to the works of the kinds ordinarily composing the Exhibition, the Society of Sculptors of England, a society for the promotion of exhibitions of works of sculpture, display 167 busts, statuettes, and other works in their branch of art, including several by Foley, Gibson, Munro, Marochetti, Durham, Monti, Marshall, Bell, Armstead, Weekes, Thrupp, Behnes, and other well-known hands. These are arranged chiefly in the West Gallery, and the recesses of the principal gallery. In the course of the evening, the testimonial address of the members of the Institute of British Architects to Mr. Cockerell was exhibited. The lettering and ornamentation of the pages are altogether charming work of the art in which Mr. Owen Jones excels.

The organ or orchestrion which occupies so much space, without improving the appearance of the galleries, should not be allowed to remain; and ere long, something should be done to the galleries and lecturer's rostrum, in the way of cleaning and repairing; if not also to the improvement of the details of the architecture, which, originally produced in haste, are now really not worthy of the architects of Great Britain. The structure of the ceiling and ventilating apertures, and the arrangement of the entrances, in reference to draughts, also must receive attention; at present any drawings exposed on tables are liable to injury in a single day, by soot that finds admission: the contrivance of such galleries in towns, however, is exceedingly difficult. Modifications to improve the ventilation were made on one occasion last year; and attaining one object, they seem to have injured the galleries in other respects.

Writing on the day on which we go to press, we must defer much of our notice of the collection, to future opportunities of publication. The hanging and preparation of the catalogue have been attended with the usual difficulties; and, besides that certain drawings are farther from the level of the eye than is suited to *architectural* drawings especially, works that more than others are characterized by minuteness of detail have a curious propensity for seeking the most elevated or the lowest positions. We allude to this matter, as we are aware that several practising architects who, on previous occasions here and in the International Exhibition, have found their drawings hung in too distant situations, have this year refrained from risk of useless trouble and expense. The improvement needed in Conduit-street might be effected, could the materials and inventions be kept for the autumn exhibition. The North Gallery is particularly well adapted for drawings.

A dozen designs for the Cathedral at Cork, out of those which were in the recent competition, fill most of the space in the West Gallery of the Exhibition: but several of them are not displayed in the requisite number of drawings; and as generally happens, however unavoidably in Conduit-street, the proportion of works exhibited to those which were in the competition, is small; whilst the "successful" design is not of the number. The catalogue leaves visitors uninformed on all the objects, stipulations, and "instructions" in the competition; so that we are left to cudgel recollection of the event, to know whether the building proposed was one for the Protestant or the Roman Catholic form of worship. We never had the expectation, that some of the original promoters of the Architectural Exhibition had, of much value in that instance, from a re-assemblage of designs, in testing justice of decisions,—seeing that the display would be a partial one; but there would be advantage in a case such as that of the Cork designs exhibited, in printing a dozen lines prefatory to a section of the catalogue, and setting forth the points which were intended to be observed by all competitors. The information could of course be obtained from the exhibitors. Difference in plans of Protestant and Catholic churches, indeed, as they have been designed during recent years, has not been very remarkable. It has been almost confined to number of altars. Credence-tables, piscinæ, and rood-screens, may be found in one and the other, just as may the arrangements of nave and aisles, long chancels, and transepts. Several of the plans which are exhibited, however, seem to show that the change commenced in many buildings erected for the forms of worship among Dissenters, by diminishing the bulk of obstructing piers, is making way where planning is concerned with the ritual of the Protestant or Catholic Church. Other evidence of the progress could readily be adduced. In the plans that we refer to in the Exhibition, each aisle is reduced in width much below the sometime common proportion, namely half the width of the nave, and is not seated, unless with one line of bench along the wall: it becomes in fact, a passage only,—that down the nave in the centre being still retained. The "well-developed" chancel of the ecclesiologists, without which it was at one time deemed there could be no salvation and no good architecture, has now slight length externally: the screen is generally no higher than the seats; and where stalls are required, and there are bulky piers, as for the support of a central tower, the western portion of the chancel and the lantern-area of the tower are one; and the desks for the reading of the prayers and lessons are, like the pulpit, entirely within the nave. Transepts are marked features only in the upper portion of the building, having no projection or very little, from the aisles, in the ground plan. At length, in these Cork designs, we find the improved arrangements which include the complete utilization of the nave, prevailing in designs for a cathedral church.

The design for the Cork Cathedral, in the Exhibition, shown in the drawings numbered 1 to 5 inclusive, and 245, may be quoted as example of the progression in planning, referred to. The nave is 35 feet in width, whilst each side aisle is but 7 feet. The total length of the interior, in this case is 173 feet; and the eastern division, or choir, is about 73 feet of the whole. An apse, with ambulatory, is the eastern termination of the plan; and an octagonal chapter-house is a feature of the group, as in most of the designs. There is a strong family likeness decoratively, in several of these Cork designs, which are of the very Early quasi-Geometric character that preceded the use of tracery proper, or having window-heads simply pierced with various forms of cusping. The tower in the design mentioned, is terminated with one of those high-pitched and hipped roof-coverings that have been lately run upon, and which however worthy of notice in old Continental churches, scarcely deserve to be often reproduced. Mr. C. H. M. Mileham's design (Nos. 6 to 14) however has broad aisles, and a long choir which terminates westerly, at the eastern arch of the tower,—which last is so much westward of a central position, that the nave appears short. The plan agrees with most of the others by the adoption of the apsidal termination, with an ambulatory. The general character may be called Early English; and there is a slated spire, somewhat too short. Mr. E. W. Godwin's design (26 to 31) is most remarkable externally, for the treatment of its two straight-sided and lantern and spire-capped towers, which are placed with considerable effect, transeptwise in reference to the plans; and internally for the pleasing proportion and decoration of both nave and choir, as shown in the sections. Certain details however would require revision. Thus, the finial to the spire-capping should be more prominent, as also should be the cornice-moulding of the lantern from which the capping springs. Moreover, the cusped ornamentation, or plate-tracery, in one of the windows, is inelegant and not equal to that of Gothic examples. In this design, there are wide aisles. The Chapter-house, octagonal, is placed eastward of the apse, one of the public footways passing obliquely under it. The Chapter-room is reached by a staircase which starts within the "Ambulatory" of the apse of the main building. Mr. J. P. Jones's design is represented only by a perspective view (33), which shows that the plan was cruciform, that there was a central tower with pinnacles, and an octagonal lantern and a spire, and that the style was Geometric Decorated. In a recent review of an important book, we adverted to our position taken some time back, that where language, and appellations of styles, serve to convey a complete idea of the appearance of a building, it must be that the design has not entirely the *art* which should be maintained as ever a requisite in architecture, by those who practise it.

In the design set forth by Nos. 36, 37, and 41 to 43, we again fall in with the narrow aisle,—in this case there is a single bench along the wall,—and with the transepts scarcely noticeable in the ground-plan. The people would look almost entirely in one direction; and there is little obstruction to the view. There is

no ambulatory to the apse, excepting in the wall, which, to allow space, has thickening-out, terminated on the exterior by a deep weathering. The Chapter-house, which exceptionally to most of the designs is oblong in plan, is joined by a passage, not to the choir end of the church, but to the south aisle of the nave, close to its western end. The decorative character of this design is Early English. A square central tower carries a slated spire. The group in the perspective view is sufficiently effective. May it not be questioned whether the distinctive character which we have come to think that of a *cathedral* church, is given by any design in which there is but one tower? Nearly all cathedrals, unless one or two with domes, have had, or seem to have been intended to have, the more than one such feature. Mr. C. H. Driver's external view and internal view (44 and 45), show that the design is Early Decorated in character. A metal rood-screen appears in the interior. The angles of the belfry-stage have an appearance of weakness for the massive spire-capping above them. Mr. W. Lightly's design (53 to 61) has a long nave, and the features of a cruciform plan, but without great width in the aisles, which, however, are appropriated for seats. The piers at the cross, seem more bulky than necessary for strength; and they would be obstructions. The tower is at the south-west angle of the nave; and the chapter-house is placed correspondingly with it, at the north-west. There are aisles to the choir; the apse is semi-hexagonal; a triforium is a feature of the interior; and the design generally is Early English. Small photographs of his drawings, showing a design of "Decorated" Gothic character, are exhibited by Mr. W. A. Carter (63). The design by Mr. C. M. Beazley (73, 74, and 79 to 84), again, has the narrow aisles as passages only, and the eastern arm but slightly projecting externally, whilst internally the choir extends westward under the cross. Mural decoration is substituted for a triforium. The nave piers are each of four shafts, separate but clustered.

In this part of the gallery, is a design for a different building, Masbro' Church, Rotherham, by Mr. W. White (76 to 78), which may be usefully contrasted with some of those of which we have spoken. It is described as having been chosen in a competition. It is an example of retrogression, rather than of any step to the attainment in modern church architecture, of plan adapted to the uses of the structure, and of decorative character which may be something more than mimicry of Mediævalism. The general area including all portions where seats are shown, is nearly a square. There are broad aisles, each with seats on each side of a central passage in the aisle; and there are transepts, the seats in which would be most inconveniently placed with reference to the pulpit, which projects from one of the western piers of the cross. It is clear that such a plan neither has the advantages as sometimes regarded for an auditorium, of a square or octagonal unobstructed area, nor answers to the demands as otherwise regarded, for the house of prayer, of arrangement of seats facing in one direction, where the oblong plan might well serve the different objects, provided only none of the seats were too distant for hearing. For a Catholic church, where the aisles, we might say, *must* be kept free for moving crowds and for confessionals, if not for subordinate services, and where the transepts would have altars and be as separate chapels, such a plan as this proposed for Masbro' Church, if seats were removed from the aisles and transepts, might be a defensible one, at least from the Mediæval point of view; but, as an entirely seated area, and for Protestant ritual,—where hearing (whatever they may say of the decline of preaching in the Church) is of importance,—surely the plan is ill adapted to the objects in view. The enduring opacity of the clergy in the matter of the purposes of a church, and on the logical course for answering the purposes through building and decoration, is the most deadening of the influences under which our art rests. The preliminary question to church-building having never been raised, and work having proceeded as though there were no such question,—fear possibly having been felt at entering upon it,—imitation has been the almost necessary leaning of the clergy, and the excusable course of those architects who *must please, to live*. Our duty is greater; and we do not hesitate to say that if good church-architecture of the future is to be, and is to owe anything to the Gothic, as it will, the channel that we have evidence in *some* of the Cork competition designs, is being just opened out, is the right stream on which to sail.

Before dismissing this subject of plan, and noting any points in other designs that were sent to Cork, we should say that mixed up with the question of aisles is that of galleries. None of the authors of the Cork designs have attempted these latter features,—unless triforia are to be taken as the same thing; and they would probably denounce any attempt to introduce them. Yet most practising architects of churches have had to manage such features; and some have three-parts come to the conclusion that if galleries increase accommodation, introduction of them cannot be opposed. We have often referred to the attempts that have been made,—mostly by architects of Dissenters' chapels,—to arrange galleries with due regard to general effect, as to the non-interference of either arch-spandrils, or columns, with the view of the pulpit. Scarcely any of these attempts have been successful; but they have been suggestive; and were we quite settled on terms of the statement of the problem, the solution might ultimately come out of the attempts. Curious it is, but it is the fact, that the pioneers, if such they be, in this path, and the recognized ecclesiastical architects, are neither one nor the other, endowed with more than half the requisites for the solution. The first-named may be open to receive new lights, but they so lack the knowledge of precedents, that their work is always in danger of being compared to its disadvantage with old work: the others have the precedents, but dare not, or do not (scarcely even "bit by bit"), go away from them. We trust however that the different signs which rise above the Conduit-street horizon, are evidence of an ulterior advance.

We have remarked that question not only has been raised as to galleries, but that there are some persons who conclude that they should be features in our churches. It is evident however that the features could be produced advantageously, only with areas under them equal or nearly equal to the widths which we have spoken of as abandoned by many competitors in the Cork competition. In the case of the greater width, the area below, wider than necessary for a mere passage, would be too valuable to lose. But some would say, with galleries, people sit facing one another, instead of all facing the east. If the clergy, not the mere Mediæval-architecture-loving section of them, would only show logically that there are objections to galleries, and say plainly that they ought not to exist for increase of sittings, there would be plain sailing. In the early *triforia*, which were very important features, and which seem to be reproduced by Mr. Cuypers, in his church at Eilendort, Rhenish Prussia (19 to 25) there must have been all the objections that are brought against the modern gallery, so far as seeing and hearing are concerned.

Certainly we have yet to see a design having iron columns not obstructing the view, where the effect, both from apparent weight of the arches and other reasons, is not vastly inferior to that of the interior of a stone-built church, say one with narrow aisles. Mr. Digby Wyatt, in conjunction with Mr. T. H. Wyatt, has made one effort or more to produce an effective interior with galleries and slender columns, using bracket-capitals; but his works in the present Exhibition do not include any of that character. There is however a design, No. 206 in the collection, wherein there is an effort in the direction referred to. The arch-springing there, though not ill-combined with the shaft, however would neither have the strength nor conduce to the propriety of effect comprised in the bracket-capital arrangement; whilst the question of effect with consistent use of galleries at all, would in any case be left still to be settled. The drawing No. 206 represents the interior of St. Mark's Church, Notting Hill, and is by Mr. E. B. Keeling. The shafts are decorated spirally in colour, and consistently. The voussoirs of the arches are in red and black bricks, which are much too glaring, in the drawing at least. The gallery-fronts are peculiar, as being filled in with open-work of tracery, an arrangement well adapted to the boxes of a theatre, but which would tend to fortify the arguments used against galleries. There is an external view of this church (213), but the grouping of the features is not very satisfactory.

Amongst the designs for the Cork Cathedral, we may name one by Mr. F. Wallen (86, 87, 90, and 91). The plan has great length, and there are two apses—one of them at the west, serving for a baptistery. The style is Early Decorated; and the details are elaborate, rather studied. The alternate ridges of the roof-hipping, east, rise from points borne by those of arches of the windows, and the tracery seems to be curved on the plan. This arrangement giving an effect of weakness, would be objectionable. Messrs. Vaughan & George contribute three external perspective views, and an internal view of the baptistery (numbered 94, 95, and 97), of their design for the same building, but nothing in the way of plan or other illustration. The character is Geometric Decorated, like that of Lincoln Cathedral. The drawings, in brown ink, are effective. Mr. W. M. Fawcett's design (98 and 99), is remarkable rather as to plan than decorative character, which latter is a species of Romanesque Early English. Besides the aisles without seats, there is a large area at the cross, surmounted by a lantern, the principle of the plan of St. Paul's Cathedral. An apse, western towers with slated capping, and transepts which are features only externally, complete a very plain design.

Effort to accommodate large congregations, already referred to as made by many sects of Dissenters, is exemplified in one of the designs for rebuilding St. James's Chapel, Westminster, which is by Mr. R. R. Bayne (106 to 108). The plan is the shape of the letter L, excepting that the lines make an acute angle. At this angle the pulpit is placed. It must be impossible with such an arrangement, to make the building more than a preaching-room. Indeed, where a preacher or lecturer has to turn much to right and left, the plan is as unfavourable considering him alone, as looking into one another's faces is deemed objectionable in the house of prayer. The decorative part of the design externally, in a sort of Gothic,—Italian Gothic of course, like most of the bad work that is done,—and showing two stories, would not justify criticism. Messrs. Lander & Bedells, who show no plan, have adopted for the exterior of their design for the same building, one of those modern arrangements of the portico that have brought discredit upon the feature, which is so valuable and effective properly treated. Their portico obstructs light to windows; it is wedged between towers, so that wet would apparently run against walls rather than off the roof, and the ridge does not continue backwards either any great distance, or as the crowning line of the building. The design required a porch or arcaded cloister to the doors: why then try for more, to a disadvantage in other respects entailed? In a third design (101) by another hand, there are as many as four stories above the ground.

We must continue our notice next week.

ODD WORDS.

FROM ugly surnames, about which so much has been said lately—the impropriety of changing them, notwithstanding the precedents among the upper ten thousand for doing so, as in the case of the Percies late Smithsons, the desirability of making such unfortunate cognomens honourably distinguished above better-sounding names as in the case of the numerous Bacons and Jones's—the transition to stringing odd words in common use is irresistible. We have many words in every-day wear that appear to have no connexion, either by derivation or association, with the objects they represent. Some of these have been formed from derivations that are forgotten; others from associations of idea that are now unknown. Before running over a few odd words used especially in relation to architectural subjects we will mention others of a general nature to illustrate our meaning in a wider range. We have all dealings with an individual represented by the word *cordwainer*. How can we connect this name with his trade of boot-making? It might apply satisfactorily to a rope-maker (from the French root *cordon*); but how comes it to represent a bootmaker? This is a word sprung from a remote association of ideas. Boots or shoes were once most esteemed when made of goat-skins from Cordova, in Andalusia, in Spain. Cordovan leather is the source from which the term Cordwainer has come into use. In the Stuart period this leather was used for gloves, and discarded as a material for boots; the word must, therefore, have been formed at a still earlier date. *Grocer* is another eccentric word. The French term for the same trade is *épicier*. This we can understand, because the goods dealt in are spices: but whence grocer? It appears this was the name given in early English times to all wholesale merchants, that is, all dealers in vendable merchandise in the *gross*; but as commerce developed, the term was assigned to one of the twelve chief companies of London. Whence, too, the term *hawkers*? This has a most far-fetched significance. Hawkers are supposed from the earliest times to have been deceitful dealers, ever ready, like the birds of that name, to prey upon their fellows, going to and fro for this purpose. It is

almost like framing a conundrum to ask by what transmutation of terms a necktie has come to be called a cravat. The answer comes laden with the dignity of antiquity: cravats were a kind of neckcloth worn by the *Croats*. The word *gooseberry* is another of the hundreds that require explanation to make them comprehensible to the etymologist. This fruit was in old times used as a sauce to *green geese*. At the beginning of last century it was as well known among country people by the words *feahs* and *fea-berries*.

The names of localities are sometimes far fetched: to give one example only,—What stood upon the site of Crooked or Crutched Friars? Doubtless a Friary; and then we recollect the connexion between crouch and cross, so antiquaries will say the name comes from the word *crucifieri* (cross-bearers).

Referring to words used in the building trades, we know *mason* to be of French derivation (*maçon*); *plumber*, of Latin derivation (*plumbum*); *glazier*, of Saxon derivation (*glæs*); *smith*, of Saxon derivation; *painter*, of French derivation (*peindre*); but whence *slates* and *slaters*, to say nothing of their curious names for different sized slates—ladies, countesses, duchesses? Why *éclater* is French for "to split," so here we get near it. *Carvers* (from *ceorfan*) and *gilders* (from *gildan*), are of Saxon origin; *carpenters* are of French connexion (*charpentier*); and *bricklayers* are of Dutch nomenclature. *Painters* (*peindre*) and their brushes (*brosse*) are both of French derivation. Building operations being of antediluvian antiquity, we would naturally look into the very early languages for their names; but we should look in vain. To *build* takes us to the source of to establish and make firm; to bore (*borian*), and to dig (*dic*), have Saxon parentage. The names of tools in every-day use are derived from many languages:—tool (*tol*), hammer (*hamer*), awl (*ale*), axe (*acse*), file (*feol*), are Saxon; saw comes from the Danish *sawe*; plane from the French; but whence bradawl and gimlet? The Saxons named our streets (*straet*), lanes (*lana*), and lands. Alleys, roads, places, terraces, entries, and passages are French introductions. Rotten-row is thought to be a corruption of *Route au roi*, the king's road; and it may not be difficult to guess how we got Amen-corner, near St. Paul's.

Other words, again, are most oddly prolific in their sorts and elastic in their adaptation. Take two words in constant use—circle and cross. There are at least a dozen distinct circles and at least a dozen different crosses. We speak of a wedding-ring as of a magic circle. Then there is the geometrical circle. Besides these there are circles of declination (on the globe), on which the declination or distance from the equator of any planet or star is counted; circles of longitude, which pass through the star and the pole of the ecliptic where they determine the star's longitude; circles of position, where the horizon and meridian bisect one another; the circle of inclination, a great circle about the sun in the sphere of the fixed stars; the circle of the equant, described on the centre of the equant, the use of which is to find the variation of the first inequality; then further varieties of astronomical circles—the circle of perpetual apparition, the circle of perpetual occultation, circles of altitude, and the circles of the empire, being the ten provinces into which Germany is divided.

The perplexities of crosses arise principally from their heraldic differences. These are of the greatest importance in reality, and therefore not to be confused with one another. There are, besides the plain cross, the cross avellane, the ends of which are like the husk of a filbert; the cross fitchee, so called from being, as it were, fixed in the coat with a sharp end; the cross fleury, having a fleur-de-lys at each end; the cross fourchet, forked; the cross milrine, the ends being treated like the milrine of a mill-stone; the cross patee, whose ends are broad and open; and the cross potent, the ends of which are like a crutch. Of compound crosses there is scarcely any end—cross batteries, cross bar shot, crossbills, crossbites, only leading the count-up to cross marriages and a long vista of other crosses too numerous to mention. Box, for another example, suggests dozens of things, from a coat to a cuff on the ear.

Referring again to names, though this time to Christian names, we have certainly cause for congratulation, and scope for augury in the baptismal names of the Prince of Wales. The first, Albert, England will evermore associate with every virtue; and the second, Edward, has been already borne by nine English kings, most of whom have been worthy of the title. It signifies "happy keeper."

"ON ARCHITECTURAL ART."

MR. HOPE'S ADDRESS: ARCHITECTURAL MUSEUM.

AN address was delivered on Tuesday evening last, at the theatre of the South Kensington Museum, on "The Condition and Prosperity of Architectural Art," by Mr. A. J. B. Beresford Hope, M.A., D.C.L., president of the society. He said, that it had heretofore been the practice to commence the session of the Architectural Museum by an evening devoted to conversation and to the distribution of prizes. On that occasion they would deviate from that custom, without, however, ceasing to uphold architectural art in the various forms in which the Museum existed to promote it. They were met at a time of considerable interest to the architectural world. Last year was a kind of saturnalia of art, with its Great Exhibition held in that neighbourhood and its little exhibition held in the building in which they were assembled. They had had an autumn to collect their senses, and were now, he hoped, wiser and better instructed than before. The present was a year of unusual interest, but there was nothing like a crisis in art to be apprehended. They were long warned against the prophet who cried, "Peace! peace!" where there was no peace; and they should be also on their guard against the equally false prophets who cried, "Crisis! crisis!" when there was no crisis. Everything with respect to the Museum and to architectural art was going on as heretofore, but with the great impulsion which it had received. He selected the term "architectural art" not without due consideration, but with a special view to the functions of the Architectural Museum. Architectural art was not architecture. Architecture might be an art, it might be a science, or it might be a business. It was a business in many senses; it was a science so far as it dealt with obscure and naked rules of mechanics. To set things on end so that they would not tumble down was the first and simple function of architecture; but it became an art when it dealt with the consideration of how to make things so set up on end beautiful without the elaboration of their beauty interfering with their stability. If it did so interfere, it might be art, but it was not architecture. The Museum did not deal with architecture as an art,—it dealt with architectural art. The difference between architecture as an art and architectural art was very simple. The former dealt with the mass—the outline, the skyline, the vista, the relation of one apartment to another; it dealt with proportion; in fact, with the building as a whole; and for the development of architecture as an art many societies were in existence. Architectural art, however,—of which the Museum took special charge,—consisted in the fringing, the flouncing if he might so say, of architecture as an art; it dealt with delicate details, with the manipulation of form,—the carvings, the colourings, and all the other accessories which are to architecture what the glazing, which painters apply as a finishing to their works, is to the picture. That was the special work of the Museum, and it was right that such a body should exist in order to supplement that which might be forgotten in the grand scramble for big effect. They existed, as he had specially defined it, for architectural art, which was something more minute than architecture itself as an art. How did they exist for that? There had been of late years a great movement in this country, in respect to what were called "Schools of Design,"—schools that should teach people the art of drawing, and of elementary forms. Was the Museum a school of design? No, for they had no systematic teaching. What, then, were its functions? He would give them a very practical answer. Such of them as had mixed in public life knew that there were no such useful people as those who filled offices to which no assignable line of duty could be allotted, for it was universally found that there were a great many things which fell out of the category of cut-and-dried official duties, but which must be done, and of course required somebody to do them, and these duties were fulfilled by the people to whom he alluded. The persons who filled those offices were the odd men of the administration. There was a deal of odd work to be done, and somebody must do it, and odd men were found to do it. The Architectural Museum was the odd man of the architectural and artistic world, and did a great deal more than was a return in money's worth for the money invested. If their income reckoned by thousands as it reckoned by hundreds—if they had a grand palace of their own, and had a subsidy guaranteed by Parliament, they might effect a good deal more than the odd man's work; but with their limited income their exertions were also limited, but they had a very hearty zeal, and a determination to do their best within their own limits. Under other circumstances they might do more; but, standing in the position they occupied, they fulfilled a very useful function in the artistic movement of the day. In the first place, they had collected a museum of specimens, which, to say the least, exemplified many phases of Gothic art of the thirteenth, fourteenth, and fifteenth centuries; these they distributed, of which he would say more hereafter; and they gave a course of lectures, of which they commenced the session that evening. These lectures were not and could not be intended as a systematic teaching. The idea of systematic teaching by lectures was a fallacy. The lecturer might generalize truths, and might set folks a-thinking; and in that way lectures possessed a marked value; but beyond this they did not pretend to go. The Society then provided a museum for people to study in; for the art-workman to copy the best models that could be provided; for the architect quietly to work out those details which he had already conceived, but to complete which it was necessary for him to resort to ancient models. Those whom he addressed had not attended that evening to support the Government institution in which they were assembled, and to which they owed a great debt of gratitude. They were not assembled to support one of those many excellent schools of design which now existed in various parts of the country; but they were come to take part in an association which existed for itself and by itself, and with a view to supplement certain great elements that were found to be wanting, and which, until they were supplied, would leave the machinery of art defective. Before he came to speak of architectural art he would dwell for a moment on architecture as an art. Without being exclusively or bigotedly, they had been always consistently, supporters of the Gothic, rather than the Classical side of the architectural movement. Had they been worshippers of a past antiquity—had they been archæologists purely and simply—had they been looking to the thirteenth century as an Elysian age, as a kind of millennium, which began and ended in that century? Far from it. They, of course, respected antiquity, for without it they would remain perpetual children in art; but he appealed to all who had taken an intelligent part in the operations of the society to testify whether they had not, with one united and strong voice, declared that they had taken up the Gothic movement because it was the movement most practical for the material and the social and the political and the religious needs of this progressive and agitated century. He did not speak of what architecture might be in 1963; but this he did say, that whatever it might be, it would have drawn more of its life from the principles which they upheld than from those of the antagonistic school of classicists. The architecture of which they claimed to be advocates had been triumphant. It was called, to be sure, Gothic; and they adopted the term. Was it because they had any special respect for the Goths or the Vandals, or for the Huns either? Was it because they looked upon the Pointed Arch as the only line of beauty, as if they did not see any beauty at all in the semi-circular line, or in the horizontal beam of the Greeks? No. But it was because Gothic was a term of reproach that they had adopted it. He had stated that their principles were triumphant; and it needed but a morning's stroll through the metropolis to prove that they were so. Look at the improvement in street architecture. Look at the points that had been gained since the Exhibition of 1851. Formerly the ideas that existed in the mind of the London builder were cement mouldings run, and capitals cast. Now, however, materials were changed. Colouring was introduced, not only into public buildings, but into private dwellings. Carved stone was used for shop-fronts, sometimes grotesquely, more often beautifully. He could point, as an instance of the great advance that had been made, to the Renaissance house in Upper Brook-street, in the occupation of the well-known jeweller, Mr. Emanuel; to the Grosvenor Hotel; to the London Bridge Hotel; to the gigantic structure of a similar class about to be erected in Langham-place; and to many others. Not that these were Gothic buildings, but they were equal evidences of their victory in the reality of the materials, the carefulness of the carving, and above all in the sky-line. What they had always insisted on was the pre-eminent necessity of the sky-line not being forgotten. That was a point which the London architect ten years ago did not care about—did not understand, or if he did, repudiated. There

was no design, no taste; but now the necessity for attending to the sky-line had been recognized, the pyramidising of the sky-line now formed a constant element of artistic conception. That showed the growth of educated feeling in architectural art. He would avoid speaking on that occasion of ecclesiastical architecture, although in that, also, there were triumphs to be recorded—triumphs of composition—of materials—of form—on which he might dilate, but the field was too wide; he should content himself with pointing to the advances which had been made, and the victories that had been achieved in secular architecture, as a proof of the success of the principles for which they had contended. What was now the special function of architectural art in the sense in which the Museum applied it—he meant the art specially of the stone-carver, the wood-carver, the decorative painter, and the manufacturer of indestructible coloured material in tiles? The Museum started some ten years ago, when the condition and position of the workman had begun to excite the attention of those who had emancipated themselves from the trammels of pedantic architecture. Up to that time the workman was looked upon as little better than an intelligent machine. Certain forms were put before him for the purpose of following. Those he had to hew out, but there was no invention developed in what he did. The carefulness of his works was very little considered. There was a certain rough conventionality which was required of him, and which he had to comply with, but more was not expected. Invention was nowhere. It was not necessary for him to have a knowledge of art; of the play of the human figure; of the expression of the human face, and of those various forms into which animal and vegetable nature throw themselves, and that are producible by a plastic art. These were beyond his scope. They were not thought of much by any one, but with the development of free art the necessity of a wider field of decoration came to be recognised on all sides. The architect had seldom time to compare, and still less time to superintend the elaboration of his designs, and so the responsibility fell upon the operative class,—the art-workmen,—to whom the details of the structure were confided. This was a wholesome thing; it taught these people the dignity of their own vocation, that they were not merely executives of certain pre-existing diagrams, but ministers of beauty and gracefulness,—active contributors to the whole artistic effect of the structure on which they were engaged. It was only by bringing this home to them that anything like a real artistic movement in the people could be consummated, and accordingly the Architectural Museum was established. It was not, however, set up to teach men anything, but for the purpose of furnishing examples in the shape of models and casts, to which those who had been elsewhere taught might resort with a view to carry out the spirit of their teaching. For that reason the Museum had been brought together; but it had not been so without forethought; for, true and wholesome as the doctrine he had stated was, the art-workman ought not to be enslaved by example, but encouraged to cultivate originality; to take the flower of the field as it grows; the human face as he found it; the passing animal as he saw it, and to draw his inspiration from them. True and wholesome as the doctrine to which he had alluded was, as to giving the workman an idea of the dignity of his position, and that he was not a mere machine, incapable of thought, yet, like all other doctrines, it had its vicious side: and the greater the success that was attained, the more that was seen of the good fruits which it produced, the more they ought to avoid that vicious development which would lead to the springing up of a crop of weeds around the goodly plants. The whole system of mere bookwork, mere imitation of a model without feeling thrown into the details, without originality evidenced in the lines and curves, was deadening, and might lead to a rapid recoil from free invention on the part of the art-workman. But, on the other hand, was it true that mere instinct was sufficient to develope the principle of free invention? Was it sufficient to set before the art-workman a group of animals or a bouquet of wild flowers, and to tell him to imitate them, and take them as his model? Could a man, in short, imitate without education? He could not. In art, as in politics and religion, the doctrine of the perfectibility of the human animal was at fault. There must be training and education. There might be the germs of the beautiful in human nature; but he did not believe in its instructive existence, for any practical purpose, without training. It was one thing to feel, it was a totally different thing to reproduce. The principle of putting the art-workman in possession of ability to copy nature as it is should be adopted only on the condition that that workman had received such instruction as made it possible for him to analyze beforehand, to follow out and to combine those elements of beauty which lay veiled in the material forms before him. They should not run wild after originality, with the idea that the human animal is capable of unknown degrees of perfection. The principle of turning the art-workman loose, and giving him full scope at his work, was good, but if carried too far it was dangerous. Originality should be kept within due bounds. First-rate imitation was far better than second-rate originality. The Architectural Museum held up examples to be copied, and it also distributed prizes. How far had these prizes carried out its principles? It might be said that they gave the rein too much to invention, and led to a sort of feeble originality. He did not think there was any ground for such apprehension. In last year's exhibition, the wood carvings were of a high order of merit. Carvings in stone came next. The other work, he was sorry to say, disappointed them all. This year they had thrown their strength upon wood-carving. They had offered few prizes, but these were of considerable value, and a long year had been given for the completion of the works intended for competition. They did so thanking those who co-operated with them in other branches, and acknowledging great merits in the works sent in; but they thought that a higher degree of merit was now required. They wanted, in short, to abolish the art-workman, and to create instead the working artist. He might be a man who only carved foliage or mouldings; but he might rise higher, and carve the human form. He should, however, work in the spirit of an entire conception of the work on which he was engaged as an artist. Much might be taken out of books; for the scholarly work of a working artist would involve more or less of originality, and more or less of copying. There was another branch of architectural art of which he should say a word. He alluded to the movement in the matter of colouring. It was in a state of transition; but it should go on and become much more extensively developed. The craving of the eye for beauty of colour in our buildings was increasing. True they had to contend against an adverse and malignant climate,—an atmosphere overcharged with smoke and with gases which greatly deteriorated and interfered with the effect of colouring. What was required was something that would give outlines of beauty in colours, and which would at the same time resist the atmosphere and the smoke. And had they not that in the vitreous materials which retained the colours which were imprinted on them, under any circumstances of fog or haze, in March winds and November clouds, and whose surface only required the pelting shower to cleanse it again and restore its beauty. They should make use of the opportunity thus afforded, and grasp at the growing appreciation of the truth, that colour, no less than form, was one of God's good gifts. The world of colour was co-extensive with the world of form. Great study should be devoted to the working out of detail. The day was going when strips of colour stuck up and down at hap-hazard were considered sufficient. Something bolder—something bigger—something more constructional, was now required. Architecture in burnt earth should be as completely architectural art, as architecture in carved stone. Here also originality and copying should go hand-in-hand. The materials might be original, but the principles of design were old and immutable. So it was, also, with architecture in iron, in which there was great scope for the exercise of invention and originality, but in which much might be acquired by existing precedents. It might be thought that he had spoken more against than for the purposes of the Museum, for, as he had stated, the Museum had no systematic teaching of its own; it had no classes; it had merely its collection of casts and models; but it was in the consciousness that these materials would work together for good that they had adopted that line of action. They held strong convictions—prejudices, some might consider them,—but they proclaimed what they believed to be the truth in art, leaving all others to fight their own way, and knowing that truth was great and would prevail. They believed in reality of materials, playing with the sky-line, attention to symmetry of form, and infinite variety in dealing with wood and stone, and now with pottery and iron. They believed that architecture had produced its most glorious development in the Gothic of the thirteenth and fourteenth centuries. Much had been light and beautiful in the centuries since. Many mechanical inventions had been produced; many new forms of beauty and infinite resources in design had been developed; a new world with its flora and fauna had been thrown in; the revival of Classical art, which seemed to deal a death-blow to the Gothic, but which, if properly handled, would have been the font of its regeneration; all these were consistent with the free architecture of Europe. We have everything the thirteenth and fourteenth centuries could give to us, together with all that is our own and all that the invention of printing and the spread of literature have opened up. Art is in a transitional state; the minds of men are in a transitional state; politics are in a transitional state; we live in a century that some years since we used glibly to say was an uneventful age, but it has, on the contrary, proved to be a century of revolutions—of which even the sixteenth or seventeenth century produced no similitude. Empires are crashing, new worlds are forming—the strong are being made weak, and the weak are becoming unexpectedly strong. And in the midst of all this zeal and turmoil, there is the grand figure of Christian, progressive, European, and especially English art, rising higher and higher from the dark and surging waves of the ocean; and we shall in the future be noted with a good or bad mark according as we perform well or ill our sworn service to that good, majestic mistress of ours.

A vote of thanks to the president, moved by Earl Powis, seconded by Lord John Manners, terminated the proceedings.

STUDIO ETIQUETTE.

THE present wide-spread fashion to have a taste for the Fine Arts, and to express a lively interest in painters and sculptors, is of so comparatively recent and rapid growth in England, that the public may very fairly be forgiven some unintentional uncouthness of manners towards artists; manners which, nevertheless, should be corrected. We therefore propose to render the public and the artist a service by exposing the "gaucheries" which offend the somewhat sensitive nature of the profession, and by directing the uninitiated in studio etiquette to practise those amenities which may lead to a more cordial fraternisation of the *atelier* with the outer world. These observations may be the more opportune as the days are close at hand on which a portion of the inquisitive art-public is permitted to enter the mysterious painting-room, wherein it is to be hoped that it will never hereafter forget that it has been invited to the "private view" of certain works previously to their being exhibited, and not to launch into general topics of conversation, nor to pry into nooks and corners uninvited.

The public often offends against good taste and good manners, in the studio of, in entertaining, and criticising, the artist. First, then, of its want of politeness in the painting-room. It is, perhaps, scarcely necessary to premise that it is not complimentary to the artist if gentlemen wear their hats or if ladies remain veiled during their inspection of works of art, however rough and of workshop appearance the artist's study may happen to be, for the amount of skill required to produce a very inferior picture is such as to entitle it to very great respect; but it does not appear to be so generally known that pointing with the foot to a lower portion of a picture is discourteous, nor that touching a picture with the finger or glove is not only irritating to its producer, but often positively injurious to the picture; nor that it is an impertinence to turn canvasses which have been purposely faced to the wall, or to pry into portfolios unbidden. It is not considerate to the artist, when inspecting the pictures he has invited you to see, to describe in florid terms the merits and beauties of others you have just seen, before remarking upon or commending his own, for in this case he supposes them to be so eclipsed by those described that his own fail to produce any agreeable effect upon you. It is particularly offensive to remark, when you do commence your observations, that his style resembles that of some other painter, ancient or modern, or that his pictures have qualities which the art sect to which he belongs professes most studiously to avoid. But it is the very poignancy of torture, if, superadded to these inflictions, you inquire if the picture be sold. The frequenter of the studio should never ask the price of a picture unless he be a known purchaser, for he may rest assured that if the picture is sold, the artist will not forget to inform him of the

fact; and if it is not, that the artist is too painfully conscious of the circumstance to desire to repeat the same. If you know nothing about the principles of art, praise those portions which you honestly feel are well done. The most grateful praise which an artist can receive is a recognition of those qualities in his works of which former efforts have been accounted deficient; but this requires considerable knowledge of art and artists. Fault-finding, unless the finder is able to suggest a remedy, is useless; but if fault must be found, pick out those, if you have the capacity, of which the artist is not aware; for the most offensive form of fault-finding in the studio, as in other phases of life, is to point out those of which men are perfectly conscious.

When the artist is thoroughly absorbed in some favourite work he dreads being disturbed. His whole vital energies stream, as it were, to his work. Any sudden intrusion checks this current, ruffles his temper, and perhaps spoils his day's work. It therefore exhibits a good feeling and politeness, which the artist will thoroughly appreciate, if, in calling upon him, you show yourself acquainted with this peculiarity, and hesitate to enter his study till you are thoroughly assured that so doing will not be an interruption: having the slightest suspicion to the contrary, good humouredly defer broaching the subject of your call until some fitter moment.

In the entertainment of artists, it is a common fault to address them in reference to their art; to ask them if they have been to such and such an exhibition; and what they think of such and such pictures of their contemporaries? This is always annoying to artists of high feeling, who, however strong may be their rivalries and partizanship, are reluctant to disclose them before non-professionals. As there is no class of men better informed on general subjects, there is no excuse for this frequent piece of ill-manners. If the artist's attention is called to his profession in mixed company, it should be for some information, or for his judgment in respect to some general art question of the day. The grossest form of ill-manners towards the artist is to engage with him in some argument on the principles of art with a manifest consciousness of equality, forgetful of all that deference which would be paid to the members of any other profession in conversing with them upon those topics which have been their life's study. Artists are perhaps themselves to blame for very much of this, as it was formerly of very common occurrence, when two or three were gathered together in the same company, to fall to upon art, and carry sharp and flaming tongues into their own camp, to the confusion of the entire host, and of a deeper respect which otherwise might have been won for the profession.

The third class of bad taste and ill-manners manifests itself in printed criticism. It too frequently happens that the men who are inducted into the office of art critics, from their facile use of the pen, "cram" for this particular calling without having any real taste for or deep study of the subject. They take up art for a season or two, make and mar reputations, and then drop the subject, perhaps for ever. An exhibition of pictures presents to these worthies a herd of competitors, some of whom are to be decorated, many maimed, and more slaughtered. They, for the most part, know nothing of the antecedent works of the painters they criticise, or of their aspirations or aims. All pictures are huddled together in their minds, to be commented upon on one plan, to be judged of as they exhibit success or failure in the imitation of objects. The historical painter and the painter of still life are tried by the same standard. This sort of critic will cruelly refer to some veteran painter as incapacitated from age, and anatomize every sign of failing powers in his works. He compares with and disparages one contemporary reputation to exalt another, or deduces the style of a picture from the personal peculiarities and weaknesses of the painter, which he describes with evident relish. It is not gracious to assume, as is often done, that the tendencies of the style and the faults of a picture were seen in the same light, to be heinous offences, by the painter as well as the critic. The artist, as a role, either tries to do what he believes to be right, or the best that he is able. If he err, it is not with the spirit to awaken or defy the malignity of critics. Another form of offensive criticism is to pronounce the style of art of this or that work "not wanted," when it does not fall in with the popular and limited taste for familiar subjects;—to decide that historical and imaginative art ought not to be, because it never hitherto has been wanted in this country. Imagine the comfort which the remorseless critic carries to the heart of the painter who has been devoting his life to high art, when, prompted by the overbearing voice of the low-art devotees, he declares that historical paintings are not and should not be required. Neither does the critic confine his prejudices and ill-manners to his reviews of the works of his own countrymen, but speaks and writes lightly of all foreign art, making use of this tone of depreciation of foreigners as a foil or background to throw out some flagrant, fulsome laudation of his English favourites.

W. CAVE THOMAS.

GEOMETRICAL PROBLEM IN GOTHIC ARCHITECTURE.

LET ABC be an equilateral arch, and the springing, AB, divided into three equal portions, AE, EF, FB.

Take EX and FY, each equal to AB, and with centres X and Y draw the arcs EH and FG.

It is required to find the centre of the circle which shall touch the four arcs AC, BC, EH, and FG.

Of course, this centre must be on the centre-line CD. Take EK, equal to one-sixth of EA, and, with centre B and radius BK, draw an arc, cutting the perpendicular CD in O, then O is the required centre; and by drawing the radius AON, we get ON, the radius of the circle required.

I inclose a demonstration of the above problem, but before publishing it I should like some of your student readers to attempt a solution, as it requires a very moderate knowledge of geometry.

E. WYNDHAM TARN, M.A.

RAILWAY SCHEMES FOR THE METROPOLIS AND SUBURBS.

COLONEL YOLLAND, R.E., at the request of the Board of Trade, has just issued his report on the railway schemes of the present session proposed for the metropolis and its suburbs. After referring to the report of 1846, he describes the present condition of things, and the various schemes now before Parliament. The report goes on to say (and this is the gist of it), that in many instances the schemes brought before Parliament were prepared in a very hurried manner; and as regarded the metropolis lying north of the Thames especially, the plans did not generally show the position of the sewers, nor give any information respecting the drainage, which was so important in examining the merits of any scheme, or in judging of its feasibility. The construction of many new lines of railway in so limited an area as that of the metropolis by a considerable number of independent companies would probably fail to afford the public all the advantages which would result from the construction of thoroughly considered schemes in the hands of a limited number of companies—the fewer the better,—with proper facilities to each other for the interchange of traffic at the various junctions. This interchange would not be possible if the termini of any two lines placed in close proximity to each other were in one case on a viaduct and in another in a subway or tunnel, or on such different heights above the same datum plane that a junction could not be effected between them. A large number of the schemes affecting the metropolis had already fallen through, from failing to pass the standing orders, or been rejected or withdrawn. Possibly some of the best schemes might thus be shut out from view; and he thought it seemed well deserving of consideration whether the true interests of the public and those of the railway companies would not be best consulted by postponing the consideration of all railway schemes which proposed to establish new lines, entering, approaching within narrow limits of, or passing across the metropolis proper, until a future session, when all the schemes to be then brought forward might be considered together, and those of them sanctioned which should appear to best meet the public requirements.

The public have already arrived at that opinion, and we hope it will be acted on. Mischief enough has been done by bit-by-bit legislation. The report, it will be seen, contains little that we have not already said.

Touching the Ludgate Station and Junction Railway, the report says the bridge over Ludgate-hill is 40 feet span and 10 feet in height.* The line descends from Ludgate-hill to Skinner-street by a steep incline of 1 in 40. No open space is interfered with, except a small portion of Smithfield. Provision should probably be made, says Colonel Yolland, for a bridge of such dimensions as would provide for any future widening of the main thoroughfare along Ludgate-hill; and the nature of the bridge, in an architectural point of view, should be subject to the approval of some public Board.

We must reiterate our own opinion that the bridge should not be permitted there at all. Fortunately the House have it in their power to prevent it. A memorial has been presented to the Court of Common Council, begging them to take such steps as they may consider most advisable to prevent the construction of it. The powers granted by Act of Parliament to the London, Chatham, and Dover Railway Company for works northward of Earl-street, Blackfriars, expire in August next, and a Bill is now before Parliament to extend the time, and to transfer these powers to the Ludgate Station and Junction Railway Company. The memorialists therefore think an opportunity is thus afforded of making arrangements with the new company to carry out the proposed railway without constructing the obnoxious viaduct. It is to be hoped every effort will be used to prevent the threatened nuisance.

THE BANE AND THE ANTIDOTE.

AMID the host of varied opinions which are expressed by men who have studied the important question of punishments, the public is fairly bewildered. It is, however, clear that the present management of convicts is faulty, and does not act as a check to crime in the case of hardened criminals.

The opinions of men like Sir Joshua Jebb, Mr. Hill of Birmingham, and others who have written on the subject, deserve the most careful consideration; and however much these authorities may differ as regards the means of punishment, all agree on the point that *prevention* is better than any means of *cure* at present at our disposal. The Bishop of London spoke very impressively on this point at the opening of the new Islington Ragged School and Refuge.

In connexion with both great and smaller evils, it is a valuable aid towards improvement to have exact particulars of their nature and extent. Unluckily as regards our criminal statistics, we seem to be in a vague and uncertain condition. On this point Mr. John Frederick Stanford, a justice of the peace for Middlesex, who seems to have bestowed much care on this matter, says, "There is still great difficulty in obtaining data on crime and criminals. The judicial returns are, instead of being prepared under one system for the United Kingdom, only for England and Wales; those for Ireland and Scotland being very meagre, and differently tabulated. The English judicial statistics, though of late years (the last five) much improved on the old system, are still very deficient; for the list of the dangerous classes at large known to the police throughout England and Wales, or of persons following crime habitually, is so evidently incorrect that I felt it a duty to

* The secretary of the company says 18 feet.

make a representation to the Home Office on the subject, as it is upon this return that Sir Joshua Jebb materially grounds his defence of 'the penal servitude and ticket-of-leave system.'" According to the report referred to, there were in 1859, 135,763 known depredators at large; in 1860, 131,024; in 1861, 123,045.

"This return," says Mr. Stanford, "would lead us to conclude that crime is steadily decreasing each year, there being a diminution of more than 12,000 of the criminal class in the short period of two years, or a decrease in the number of known depredators at large of nearly ten per cent. in the two years. There is scarcely any reliance whatever to be placed on these returns. It is self-evident, that while from 135,000 to 140,000 convicted criminals of one kind or another are annually discharged from our gaols and prisons, the number of known depredators at large, *i.e.*, of persons following crime as a trade, cannot decrease or even remain stationary, but clearly must be augmented—and very largely so—unless you assume that every one of those 140,000 discharged convicts follows, after his discharge, an honest life; a supposition in which Sir J. Jebb does not himself indulge, for he gives a proportion of 1,000 out of 1,400 who have not returned to crime, leaving more than a fourth as falling back into the class of known depredators at large, or rather of those who ought to be known by the police under that head. Now if the same per-centage applies to the discharged prisoners from county and borough gaols as from the convict prisons, we should have to take, instead of 400 out of the 1,400 for the year 1861, as the proportion added to the existing known depredators by a single year's discharge, 4-10ths of 131,869, or 52,744. This is, of course, also an evidently erroneous calculation; for if the above proportion of the discharged criminals returned to crime, the re-committals would show a much higher average, and the number of depredators at large would soon swell to gigantic and fearful numbers. The fact is," continues Mr. Stanford, "the judicial statistics fail here altogether." This is a serious matter, which is well worthy of inquiry. It is, moreover, stated that in one year—the year 1861—479,723 crimes and offences were committed in the United Kingdom, out of which followed 308,115 convictions.* These figures indicate an immense amount of evil, against which it is necessary to contend. In order to show more clearly the extent of the cost of our pauper and criminal population, we give the following numbers as they have been marked out by Mr. Stanford. The population of the United Kingdom in 1861 was 29,036,508, and the number of paupers relieved in 1861 was 945,269, at a cost of 5,778,943*l.* for England and Wales; 164,000 paupers, Ireland, at a cost of 584,348*l.*; and the number for Scotland, 97,000, at a cost of 618,000*l.* The numbers and cost, according to these figures, would be as under:—

Paupers.		Cost.
945,269	England and Wales	£5,778,943
164,000	Ireland	584,348
97,000	Scotland	618,000
1,206,269		£6 980,291

In England and Wales, in 1861, there were committed 50,809, indictable offences: persons apprehended numbered 27,174; persons tried, 18,326; persons convicted, 13,879; offences determined summarily, 394,717; convictions, 263,200. The number of charges and convictions in Ireland and Scotland being the grand total of crimes in Great Britain to the immense numbers above given; viz., crimes and offences, 479,723; convictions, 308,115.

In England and Wales—1861—there were 10,876 convicts in prison; 3,753 convicts discharged; 1,645 convicts discharged on tickets-of-leave; 1,350 convicts discharged, expirees; 610 convicts discharged, sent to W. Australia [we should like to have particular account of these]; 147,971 prisoners in county and borough gaols; 130,571 prisoners discharged; 5,414 prisoners in reformatories, schools of industry, &c.; 1,298 prisoners in reformatories, schools of industry, &c., discharged; 28,649 prisoners in confinement; and 123,000 known depredators at large (according to the Home Office statistics).

In 1861, for the suppression of crime there was an army of 20,760 police; and the cost of the police alone, in this year, was 1,579,200*l.*; and of gaols, prisons, prosecutions, &c., 2,768,500*l.*: altogether, 4,347,700*l.* for the suppression of crime; and this, added to the cost of pauperism, would amount to 11,327,991*l.*

* It should be noted that these figures include committals for debt, drunkenness, and various trifling offences.

When we think of this enormous outlay for one year, only for pauperism and crime, and that as regards the latter (if we may except the industrial and reformatory schools to which the younger class of offenders are sent), how little actual permanent good has been done, we look with anxiety to means for the prevention of crime which are far less expensive, and more sure in their good effect than those to which we have referred. Amongst those which in many instances need it, there are no institutions more worthy of support than those into which so many poor children are gathered from the streets, and the Homes where forlorn boys, on the verge of vice and crime, are sheltered and put in the way of earning an honest livelihood; and our object in directing attention to the cost of pauperism and crime is to induce the comparison of this with the far cheaper and more satisfactory institutions which are working, to a considerable extent, in the prevention of crime. We fear that during the present session of Parliament an attempt will be made to withdraw the very small grant which is made by the Government in aid of some of those Homes and schools, and on which, in several instances, the continued existence of the national and some other schools depends. Our public expenditure has grown to such a vast extent, that naturally a general wish has been expressed for its reduction, and there will in the House of Commons be much scraping and paring at comparatively small items, while larger ones will be likely to escape without attention; but in all attempts at saving, it should be carefully considered—if the grants for assisting destitute children and those establishments for the advancement of general national education, and the increased progress of artistic taste, be not money well invested and which will eventually return a rare amount of interest.

The good results of Ragged Schools and Industrial Homes, which are branch establishments connected with them, have been proved beyond a doubt, and we feel certain that a large extension of the system in the metropolis and other chief towns would check a great amount of crime.

The good effect of these institutions is evident to all who will take the trouble to look. Go to those dens to which we have often referred, where vice is bred, and then pass into one of the schools that, amid struggles and difficulties, have been opened in the midst. Go, for example, through some of those courts to the south of the Clerkenwell Sessions House, and after seeing the state of the children in their homes and gutters, which cannot be described, pass into Lamb-and-Flag Court, to the well-known Ragged School there, recently rebuilt, and within the walls of which all is order and peace. In the large school-room under the care of the master, Mr. Sayer, we found more than 100 boys in attendance, and it is satisfactory to learn that the numbers are greatly increasing. The master, who seems to be devoted to his business, tells us that many of the boys who are here so decent-looking and well-conducted, obtain their living in part or entirely in the streets, by selling watercress, radishes, lettuces, and fruit, according to the season, and are thus deprived of the benefit of proper instruction, excepting at broken intervals. There are other causes and difficulties which prevent regular attendance; still much good has been effected. There is an idea held by some that in such schools as this the children receive a degree of education beyond that required by their station, and that a class of children attend here for whom such schools were never intended. These fears are groundless. The children are of the lowest class. In the greatest poverty, often hunger,—it is an extraordinary sight to witness the anxiety of many to learn, and the ready answers which they give to questions. Many boys come to school without having food to eat, and often, to satisfy the cravings of hunger, they are fed with bread and treacle, for which they are very thankful. Many instances might be related of the kindly nature of those boys who are of the class of City Arabs. On one occasion the master sent for half-a-quartern loaf and some treacle to feed three boys. In the afternoon Mr. Sayer asked them if they would finish the food before they went home. "No, thank you, teacher, we will save it till to-morrow," was the reply, although neither of them, the master believed, had the prospect of anything to eat till he came to school next morning.

Above are the girls' school and infant school; the former managed by Miss Morris, and the latter attended to by Miss Ryder. We are tempted to go into detail in connexion with these excellent schools, but forbear. Still we would say that no lesson could possibly be more valuable to those members of the legislature and other persons of influence who reason from theories than a visit to such a neighbourhood as this, and then to the schools. "Look on this picture and on that." See the evident advantage of the schools, and compare the small cost of this and other kinds of teaching with that of crime.

VENTILATION AT THE ARCHITECTURAL ASSOCIATION.

THE usual meeting of members was held on Friday evening (the 20th inst.), at the House in Conduit-street. The chair was taken by Mr. Blashill, the president.

The following gentlemen were, on ballot, elected members of the Association:—Mr. J. H. Birch, Haleford-street, Islington; Mr. Frederick Judge, Grafton-street, Somers Town; Mr. William Cooper, jun., Bickley, Kent; and Mr. B. Wilkinson, of 17, Store-street, Bedford-square.

The President announced that the first meeting of the class for voluntary architectural examination had been held on the previous Tuesday, and that more than twenty gentlemen were present. This, in his opinion, was a very encouraging commencement, and he hoped that so good an attendance would be maintained.

The Hon. Secretary read a communication which had been received from Mr. T. R. Smith, accompanied by specimens of Chadwick's patent Archimedian Ventilator and Smoke Conductor. The invention consisted of lifting-vanes, acting as a screw, suspended within a circular tube or shaft upon an imperishable substance, moving without noise, and surrounded by a diagonally-formed wind-vane, hung so as to rotate by the slightest action of the air. They were constructed for chimneys, from 10 to 13 inches in diameter, and for buildings from 14 to 30 inches.

The President observed that, at the meeting before the last, a discussion had taken place on the subject of ventilation, and that as it was felt that it had not been exhausted, it was proposed to resume the debate that evening: Mr. Harris, who had promised a paper on Gothic Woodwork, had not been able to furnish it.

Mr. Atkins then called attention to the great desirability of architects, engineers, and others making themselves acquainted with the elementary laws and first principles which governed the air and its component parts, and without which all theories and mechanical details were, in his opinion, useless. He suggested the foundation of a college, to be built upon true principles of construction; and explained, by means of a drawing, the manner in which he proposed that the building should be supplied with air. He also exhibited the drawing of a chimney, or shaft, "from 1,000 to 1,500 feet high," which he said would be a magnificent method of furnishing an inexhaustible supply of pure air to a crowded city like London! When asked how he proposed to get the foundation for such a structure, and when reminded that the highest factory chimney in England was only 400 feet, Mr. Atkins said it could be easily done in iron if not in brick.

Mr. Fowler observed that it was matter of regret that the discussion on the subject of ventilation in the Royal Institute of British Architects had led to no practical result. In his opinion the questions raised by Mr. Atkins were altogether of too theoretical a character for a practical age like that in which we had the privilege to live. On the last evening of meeting the question had been put as to whether the stove invented by Mr. Batty was such as they as architects could recommend. It seemed to him that the theory of combustion, as laid down by Mr. Batty, was, in the main, correct. By his principle the air for combustion was brought in at the back of the grate. In existing houses the supply could be brought by a pipe carried behind the skirting-board, while another division would convey it into a box at the back of the flue. He had tried the principle, not only in large hotels containing hundreds of rooms, but in small dwellings for the poor, and it had given the utmost satisfaction.

Mr. Pierce, of Jermyn-street, took issue with Mr. Fowler as to the merits of the system alluded to, which he contended was false in principle *ab initio*, and at variance with the known and admitted truths of science. He contended that the only true principle of ventilation was realized in the fresh-air fire-lump stove-grates which he himself had adopted after a protracted series of experiments before the Board of Health. The grate of Mr. Batty was in fact a furnace, and not a stove, adapted to ordinary use. By his (Mr. Pierce's)

principle he kept the air always changing, so that no impure air could possibly be breathed in the room. It was important that every fresh-air grate should have a separate air-shaft brought directly from the external source, and having no communication with other shafts. The air being thus brought to the back or side of the chimney, for which the grate is intended, and below the back hearth of the chimney-piece, it would be discharged into the warm chamber at the back of the grate. The effect of building good solid work close up to the projecting ribs of fire-lump would be that the fresh air entering at the back of the grate would rise and be stopped by the first detaining rib of clay. Passing round this rib it would enter the second chamber and be detained by the rib above, and thus traversing in a serpentine form the various ribs of hot clay the air would be quite warm as it reached the top of the chamber. The air which entered the room would thus be slightly warmed, and it would keep constantly traversing the apartment and always pure.

Mr. Langstaff then explained Mr. Boyd's process of ventilating houses by a series of divided flues, and also explained the properties of Mr. Boyd's stove, which admitted the air by an exterior opening, and subsequently warmed it in a chamber behind the stove, bringing it into the room through an ornamental valve carried along the front of the stove over the arched opening, and which could be opened or closed at pleasure.

Mr. Pierce, in somewhat excited language, declared that this invention was pirated from him. He was called to order by the chairman.

Mr. R. P. Spiers explained a mode of ventilation which, he said, had been found to answer. It consisted of an aperture over the chandelier, communicating with a flue carried into an old chimney, in which, at some elevation, a gas-burner was turned on when necessary. The air was admitted to the room from the staircase, through an opening over the door, into the wall, and the latter was warmed with a gas stove.

Mr. Adams pointed out the defects which in his opinion existed in all the modern systems of ventilation. With regard to Mr. Batty's plan, of which Mr. Fowler had spoken, it seemed to him that it could not be introduced into existing buildings without violating the Building Act, and that no district-surveyor would allow it.

Mr. Fowler said he had put up several, and in no case had a district-surveyor objected.

After some further observations from one or two speakers, the President, in closing the debate, observed that the Association was indebted to the gentlemen who had attended to explain their inventions.

The illustrations for the next class of design will consist of "Chalice, Flagons, and Paten." In consequence of Good Friday falling on the 3rd of April there will not be any meeting that evening; but on the following Friday evening the class of design will meet (subject, "Market Buildings for a small Town"); and on the 17th proximo the annual *conversazione* will be held, when the prizes offered by Mr. Tite, M.P., and others, will be awarded.

THE "HALLES CENTRALES," PARIS.

THE works of the new pavilion of the Halles Centrales, undertaken immediately after the demolition of the Marché des Prouvaires, suffered, during the time of the excavations, a considerable drawback from the presence of subterranean springs, which it was necessary to stanch: now, these difficulties having been overcome, the foundations have been raised on a solid bed of concrete, for the outer walls of the cellars, and the walls carried up as high as the ground-floor. The surrounding wall of these cellars is provided with six flights of stairs, two on each of the three faces: as to the fourth side of the quadrilateral, it consists of galleries formed under the transept which separates the new pavilion from that of the "boucherie."

These underground portions of the Halles constitute not the least interesting part of the establishment: each of the cellars, equal in extent to the market above it, is divided into compartments by iron treillage, on which are placed numbers corresponding with the stalls under which they are situate. Of these cells, called *cabines*, all thoroughly ventilated, there are no less than 1,200 for the six eastern pavilions. Under some of these pavilions they are devoted to a special purpose: one is an abattoir for poultry: another contains all appliances for washing and preparing butter: farther on is a reservoir of fresh running water for the preservation of fresh-water fish: opposite there is a cellar for the inspection of eggs, which takes place every morning by the aid of artificial light: in fact, the whole of these depositories merit the attention of the observer.

These cellars of the Halles have been carried out with the prevision of the establishment of a railway which at some future period will place them in communication with the "Ceinture" railway, by means of the great subterranean thoroughfare of the Boulevard de Sebastopol: three lines of way, two for arrival and one for returning, will communicate directly with the terminus of the "Est."

The eastern body of the Halles Centrales, composed of six pavilions, was commenced in 1854 and terminated in 1857: that of the West, although only consisting of four pavilions, was less rapidly executed; for, since the first pavilion of this second group has been commenced, almost as long a period has elapsed as was necessary for the completion of the six of the opposite group. Moreover, this western pavilion is not even yet completed: in fact, only one-half of it is occupied.

BIRKDALE DRAINAGE.

THE works connected with the construction of a main outlet drain at Birkdale, near Southport, have just been brought to a completion.

Considerable difficulty has been experienced in draining this locality; two previous schemes having been carried out which have failed entirely; principally (as is stated) from want of judgment in the selection of the site of the outfall, and the system of construction being ill adapted to sandy soil, in places 15 and 20 feet deep. The present outfall drain is situate about the centre of Birkdale, and carried in a direct line from Weld-road to a point below high-water mark. The foundation of the drain is formed of invert blocks laid upon a bed of puddle 6 inches thick, to keep out the running sand, and having a 3-inch socket around the bottom and sides, connecting them in a continuous substructure. The work has been kept free from water by drainage through the cells of the blocks into a sand-pit 4 feet below the bottom of the drain, kept constantly pumped out; the water during the time of working never rising higher than the bottom of the invert block. By the adoption of this plan the contractor has been enabled to get the whole of the brickwork in perfectly dry.

From the end of the brick sewer cast-iron pipes are laid, discharging on to an apron constructed with a kerb of sheet piling driven into the beach, filled in with concrete, and paved with 6-inch setts, laid herring-bone fashion.

The contractors for the work are Messrs. J. & G. Boyson; the iron pipes being supplied by Messrs. J. & J. Cliff, of Bradford; and the invert blocks by Messrs. J. Cliff & Sons, Wortley, near Leeds. The whole has been carried out under the superintendence of Mr. Alfred Taylor, C.E., of Liverpool.

CRINOLINE AND COMBUSTIBLE DRESSES.

A GUERNSEY correspondent, "H. D. M.," addressing us on this subject, on the ground that "the *Builder* has often, in various ways, been the means of greatly benefiting England; and that only lately the adulteration of oil was in part suppressed through the exposure of its frauds in our columns," asks us if nothing further can be done to put an end to the fearful sacrifices of life arising from the often unsightly as well as most perilous distension of women's inflammable dresses by crinoline.

In respect to "English Suttee," as it has been significantly called,—only it is not widows alone who sacrifice themselves, nor is it to a deceased husband's manes, but to a senseless variety of fashion, after which they flock like sheep, whatever ditch or pit of destruction it may lead them into,—all we can say is, that not only the *Builder*, but many other members of the press have done their best, over and over again, to mitigate at least, if not to put an end to it, so far as the substitution of uninflammable for inflammable materials on the "funeral *pile*" are concerned; but hitherto apparently without the least avail. Her Majesty referred the matter to eminent chemical authority; and the result was that several methods of rendering combustible dresses at least uninflammable though not incombustible were pointed out; but it would appear that neither laundresses, manufacturers, nor ladies themselves, have taken much advantage of the results of her Majesty's thoughtfulness and good feeling in this matter; and that dresses are worn just as inflammable as ever; and not a week, scarcely a day or two, indeed, passes without a record of some new case of burning to death from the use of crinoline with inflammable dresses.

We would suggest to the weekly press an addendum to their lists of births, marriages, and deaths, under the head of "Deaths from Crinoline," in which a cumulative record of all such cases might be briefly given; only we fear that at the end of each year the accumulations would be far too great for longer continuance or further publication.

The chief difficulty in rendering muslins and cottons uninflammable, we presume, is that they must be frequently washed; and even though manufacturers were to render them uninflammable at the outset, washing would, in all probability, remove that which rendered them uninflammable. Could some process uninjurious to the material be discovered which washing would not counteract or undo, the difficulty might thus be obviated; but there is not much hope of this, we fear, with such materials to work upon. Ladies ought to dispense with muslins and cottons as long as their crinolinian mania lasts; but what they *should* do is not exactly what they *will* do.

The process for rendering ladies' dresses uninflammable, the result of which is exhibited by Professor Pepper at the Polytechnic, and to which we have already drawn attention, appears to be one of the most effectual yet tried; and it is to be hoped the ladies who witness the exhibition, at all events, will benefit by it.

TO CALCULATE STRENGTH OF WROUGHT IRON GIRDERS.

OUR correspondent, Mr. Robinson (p. 192), appears to have quoted Fairbairn in a hurry, and so fell into a mistake. The formula runs:—Multiply the area of the bottom flange, the depth of the web, and constant, 75 or 80, as the case may be, and divide by the distance in inches between the supports. Or:—$W = \frac{a\,d\,c}{l}$, where W, is the breaking weight in tons; a, area of *bottom* flange; d, depth of girder; c, constant = 75, for plate girders, or 80 for box girders; l, length. All dimensions in inches. The sectional area of the top flange should be to that of the bottom flange, as 12 to 11.

PREVENTION OF FRAUD ON BANKS.

SOME time ago, a fraud was perpetrated upon the British Linen Company's Bank, Glasgow, by altering the value of a letter of credit from 22*l.* to 72*l.* Mr. Robert Climie, C.E., suggests to us a plan to prevent this: it is on the same principle as perforating the paper used for postage and receipt stamps. The banks, by using small punching machines, could mark in perforated figures the amount of the cheques and orders: the figures marked in ink and the perforated figures always agreeing. The simplicity of the invention should recommend it.

THE GRAMMAR-SCHOOL, NEWCASTLE.

THIS institution dates from the reign of Queen Elizabeth, and has experienced vicissitudes. Now, however, a new building is to be erected. The designs are by Messrs. Johnston Hogg & Son, of that town. The building will be erected on ground to the west of the almshouses of the Virgin Mary Hospital. It will form a rectangle, 134 feet 9 inches by 122 feet, and include the residences of the principal or head-master, and his assistants, besides accommodation for a certain number of resident pupils. There are six school-rooms, all on the ground-floor, occupying two whole sides of the building. Three of the school-rooms, by a removal of the partitions, can be thrown into one, when it is desirable to have all the pupils together, as at the annual examination. The three largest school-rooms will be 38 feet 6 inches by 25 feet; the other three not quite so large. The boys' refectory will be 27 feet 9 inches by 20 feet. The sleeping apartments form the upper story. There is a vacant space in the centre, suitable for a playground, with conveniences adjoining, and a covered corridor traverses the building, and communicates with all the apartments on the ground-floor. The new building will accommodate 500 boys. It is proposed to lay the foundation-stone in the month of August. A more appropriate event could not signalise the second meeting of the British Association in Newcastle.

"EMIGRATION INTELLIGENCE SOCIETIES."

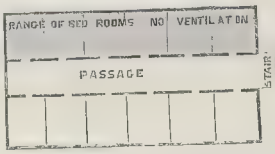
MR. BARUGH ALMACK suggests in a published paper (Dorrell & Son, Charing-cross) the establishment of societies under this title, to collect and afford reliable information with respect to emigration. It is a good idea.

"If," says Mr. Almack, "a great 'Emigration Intelligence Society' were thus established in each county of England, one of the first results would be the general knowledge of the fact that (instead of there being merely the limited acreage of England, for which the tenant-farmers of England are competing with each other, to the great injury of their own class and of the public, without any permanent benefit to landlords as a class) there are thousands and ten-thousands of 'land estates' in each of several different colonies, to be purchased at mere nominal prices; and that in those colonies large families have decided advantages over small ones. As such new estates or farms in the colonies would be their own freeholds, there would be no difficulties in arranging with others as to their 'modes of cropping,' &c. They would have to bear in mind that, if they improved their new farms, they or their own families would enjoy such improvements; and if they injured the land, they or their own families would as certainly suffer the loss or damage thus caused. Thus the equitable covenants so necessary for tenants in England would be unnecessary for them as yeomen or owners of the land they cultivated in the colonies."

We quite agree with Mr. Almack in believing that with really good arrangements and good agreements between landlords and tenants, England might (with the present knowledge of agriculture possessed by many of the best tenants) produce at least half as much more, in corn and stock, as England produces at present. It is scarcely necessary to point out any of the many beneficial effects which this great increase of agricultural produce would have on other classes of the population of England, but it may be as well to state that such increase would greatly exceed all the importations which have yet been received from foreign countries. We are inclined to think that the societies suggested might greatly promote the general welfare of England and her colonies.

BAD ACCOMMODATION FOR HUMBLE TRAVELLERS.

WITH reference to the very poorest class of wayfarers enactments have been made for the safety of their health and for their general comfort. Unless the drainage be efficient, cleanliness attended to, and a sufficient amount of breathing space and accommodation provided for each poor traveller, no house is licensed for their reception. There are, however, a very large number of persons whose means are not great, and who, in these railway times, are driven from home by business and other occasions. These persons would not for a moment think of going amongst strange bedfellows in the common lodging-houses; and it is to be regretted that in many large towns there is not to be found equal accommodation for them at four or five times the cost of those places.



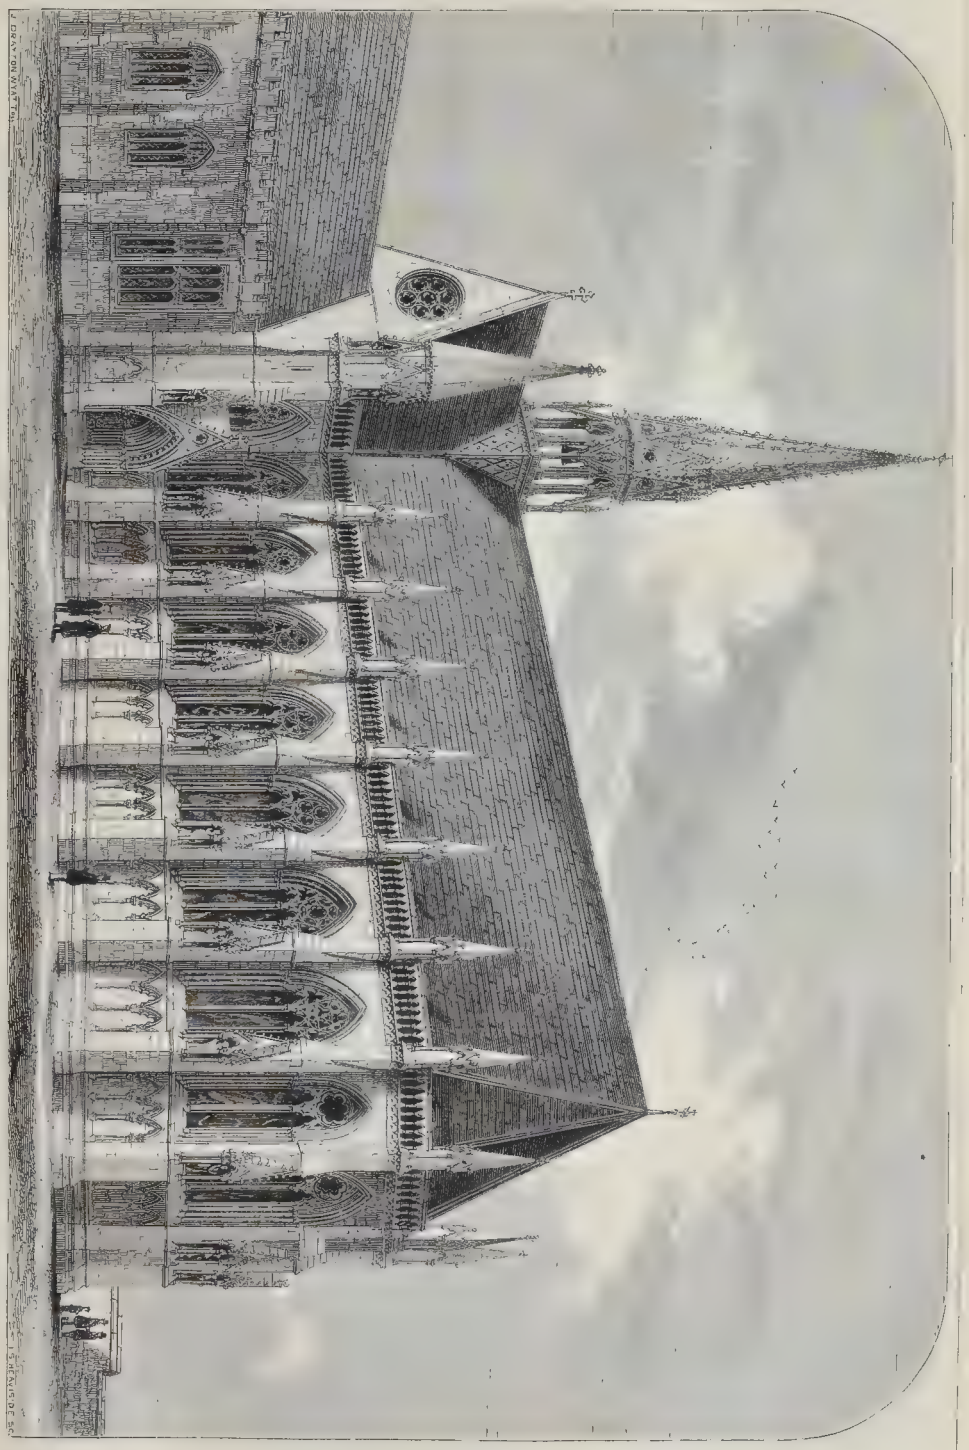
In most of the large towns there are modern hotels, which are fitted with every convenience after a fashion; but the cost and arrangements of these establishments put them out of the thought of most second and third class travellers, to whom we are referring. In many of the old-fashioned towns, particularly in the north of England, there are inns which have now become of a second and even lower rate, which are execrable in their sanitary arrangements, but which, for miserable accommodation, charge what is really an exorbitant price. For instance, a traveller whose means compel him to be economical may, at the end of his railway journey, call at an inn whose glory seems to have declined, but whose somewhat snug exterior appearance induces him to think he may be able there to take his ease, without being charged more than he can conveniently pay. He finds, however, in the morning, that although the attendance has been of the worst, his bedroom most unwholesome, the hangings of the old-fashioned four-post bedstead and the paper of the wall faded with time and mildew, the whole interior fittings falling into "the scar and yellow leaf,"—the bill next morning is:—

	s.	d.
Supper	2	0
Bed	2	6
Breakfast	2	0
Attendance	1	0
	7	6

The writer had been more fortunate than some other travellers staying in this hostelry in the selection of a bedroom, and was asked to inspect the "dog-holes" in which some of the travellers who had come later had been placed. One of these opened from a passage in which there was no light except from a window at the further end. There was a dark narrow staircase, which led to this passage. In the bedrooms on the right-hand side, there were no fireplaces or means of ventilation at the back, and the only opening in the front was a door with a small window which was lighted by the passage-window: on the opposite side were other bedrooms which, although small, were better circumstanced, for they had windows which looked into the street in front of the premises; although unfortunately, in most instances, the windows were not allowed to open properly. We made a sketch of the place, removing a partition to show the inside of one of the rooms, and here it is, with a plan:—

PACKING AND POISONING.

The rooms are very small; and, without taking into account the impurities which usually exist in the parts surrounding buildings of this description, it is very clear that travellers are worse off for accommodation in places like these than the poorest person is who seeks for shelter in the licensed common lodging-houses. In such situations as this, in buildings chiefly of wood, persons may be fearful of a sudden outbreak of fire. On mentioning this to an elderly lady who kept an inn in Lancashire, constructed somewhat in this way, she candidly confessed that she had been more than once in actual danger. "One night," she said, "I slept in a room which had no window outward, but looked into a passage. When I awoke I smelt fire, and was nearly suffocated with smoke. With difficulty I came down-stairs, and found in the kitchen that two maidens had been left in front of a blazing fire, and by some chance one of them had fallen into it and was completely in flames. The other was also partly on fire. As quickly as possible, I took the clothes off and pushed them up the chimney; and fortunately this was all the damage which was done." We wondered at the slight manner in which the burning of a *maiden* was mentioned, and it was a relief to learn that in this district the wooden stands—which in other parts of England are called "horses"—used for airing or drying linen, are in Lancashire called "maidens."



Believing that there is a very great necessity in many provincial towns for accommodation for second and third class travellers, we have taken some trouble, from time to time, to examine the rooms which are provided for their use. In some very large towns—Manchester, for instance; and the same will be found to be the case in many other places—a stranger who requires to stop for a few days at limited expense might wander long before he met with a place suitable for his purpose. There are but few coffee-houses with sufficient bed accommodation; and in the centre of Manchester and in other towns you might go over long distances without seeing respectable places, with cards in the windows, labelled, "Furnished Lodgings to be let." There are, however, publichouses—still called *inns*—in which a bedroom can be had for 1s. a night; but the arrangement of these establishments is most unsatisfactory. In one part of the ground-floor is a tap-room, into which rough people are admitted, who drink, sing, and quarrel until a late hour of the night,—often until early morning. There are other rooms in which better men assemble, and these parties are not silent; and from all, the fumes of tobacco ascend to the upper floors: for hours the basement part, and perhaps a large club-room above, are densely crowded with people, and there is no thought of ventilation below and but little provision for it above. In some of these places it is not unusual to make up upwards of fifteen beds each night: this would give a revenue, independently of other profit, of more than 270*l.* a year.

In some instances, near railway stations, large houses have been taken, and, although unfit in their internal arrangements, have been extemporized into coffee-rooms, dining and sleeping places. In these every morsel of space, regardless of health, has been turned to account. Beds are placed in closets and small rooms barely sufficient for one person, divided by thin partitions into two or three sleeping apartments, in which there is scarcely room to move or breathe. These rooms, bad as they are, are eagerly sought for by persons coming by the late trains, or who may require to start early in the morning. The profits of some of these houses must be enormous.

There is certainly need of interference in connexion with many of the establishments where second and third class travellers are forced to stop, and we see no reason why such places should not be inspected and made wholesome before they are let in this manner; or if this is not to be done, it is worth the consideration of speculative persons if it might be the means not only of doing good to others, but of benefiting themselves, to erect wholesome buildings near railway stations. They need not be costly, but should be neat and respectable in their external appearance, thoroughly ventilated, and comfortably fitted within, furnished with plenty of water and light, and where beds could be had at the rate of 1s. a night, and a good breakfast at a moderate price. There seems little doubt that if places of this description were opened and well managed, and their merits sufficiently known, they would be well appreciated by the classes of travellers for whose benefit we have put together these tap-room notes.

THE NEW CHAPEL, ST. JOHN'S COLLEGE, CAMBRIDGE.

THE new building which is about to supersede the present chapel of St. John's College, Cambridge, and of which our illustration presents the approved design, by Mr. G. G. Scott, will be on an unusually important scale, both as regards dimensions and proportions generally; and this, with the advantage of an excellent site, will render the structure a noteworthy addition to the public edifices of the town. It will form the northern side of the quadrangle nearest the street, having its apsidal east end brought forward in that direction to within a suitable distance of the college boundary. At the west end it will communicate through a spacious ante-chapel with the present venerable hall, which it is proposed to extend one bay, we believe, so as better to suit the conveniences of arrangement. Leading out from the ante-chapel, and close to the end of the hall is the entrance doorway seen in the view, with its shallow groined porch and crocketed gable. The plan of the chapel itself is a parallelogram, terminated by a polygonal apse, the total internal length being about 138 feet, and its breadth 34 feet. The several bays are divided externally by massive buttresses and pinnacles enriched with niches and sculpture, while, within the divisions are marked by groining shafts, which carry a ribbed and vaulted ceiling of oak, portions of which it is proposed additionally to enrich by means of inlay, &c. The side windows are of three lights each: those to the apse are of two; and a continuous arcade encircles the exterior below the window string, and also the whole of the interior of the apse. In the north wall two of the bays are pierced into arches, behind which is placed the organ chamber. The seats are all ranged longitudinally, those against the north and south walls being divided into stalls. Tenders for the erection of the building (which is a part only of the work contemplated at this college) have not as yet been received, but there is every probability of the undertaking being commenced forthwith, the preliminaries being very nearly completed.

PROPOSED CHAPEL, ST. JOHN'S COLLEGE, CAMBRIDGE.—MR. G. G. SCOTT, R.A., ARCHITECT.

MEDALS OF ARCHITECTURAL INSTITUTE OF SCOTLAND.

THE council have awarded the following premiums for the drawings sent in competition:—

I. *Geometrical Drawings.*

1st. Medal.—Andrew Dewar, apprentice to Mr. Robert Paterson, architect, Edinburgh.

Honourable Mention.—Thomas M'Mahon, apprentice to Mr. John Lessels, architect, Edinburgh; Andrew Scobie, apprentice to Mr. Robert Hay, architect, Dunfermline.

II. *Perspective Drawings.*

1st. Book.—Hip. John Blanc, apprentice to Mr. David Rhind, architect, Edinburgh.

III. *Drawings for Ecclesiastical Buildings.*

1st. Medal.—James Rhind, apprentice to Messrs. A. & W. Reid, architects, Elgin.

2nd. Book.—Edward F. C. Clarke, apprentice to Mr. David M'Gibbon, architect, Edinburgh.

IV. *Original Design.*

1st. Medal.—Edward F. C. Clarke.

2nd. Book.—William Dothie Dobson, apprentice to Mr. Patrick Wilson, architect, Edinburgh.

PREMIUM FOR WOOD CARVING.

THE prize (7*l*.) offered by the Society of Wood Carvers, Newman-street, London, for the most meritorious carving in wood contributed by any of its members to the Exhibition of Sculpture in the Conduit-street galleries, has been awarded to the bas-relief described as "The Nymphs of Immortality, attended by the Loves, crowning the bust of his late Royal Highness the Prince Consort." The executant is George Bridge, in the employ of Messrs. Wright & Mansfield, cabinet-makers. The bas-relief was worked without any model, in the hours of the morning and evening, before and after workshop hours. The judges appointed by the Society were Mr. Bayliss, of Judd-street; Mr. Anstey, successor of Mr. John Thomas, sculptor; and Mr. George Lock.

THE DRAINAGE OF TOWNS.

INSTITUTION OF CIVIL ENGINEERS.

AT a meeting on February 17th, the discussion upon the two papers, "On the Drainage of Dundee," by Mr. J. Fulton, and "On the Sewerage of Newport, Monmouthshire," by Mr. A. Williams, reported in our pages, occupied the whole of the evening. It was remarked that, although the author of the first paper had stated, that no ventilation whatever had been applied to the sewers in Dundee; yet, with apparent inconsistency, he spoke of the gases of the sewers being prevented from escaping into the streets and houses by trapped gullies. It was urged that it was dangerous to lay down a system of sewers over an entire town, without in the first place providing, as part of the scheme, for the fullest and freest ventilation, particularly at the higher levels; and that care was specially necessary in towns presenting naturally steep gradients. Disease had broken out in well-sewered districts, which was traced to the connexion of the house-drains with unventilated sewers; the highest portions of the towns suffering most severely. If the sewers of Dundee were sweet, it would lead to the inference that they must have been badly constructed, and that there were joints and crevices which let out the gases; for with a perfectly tight sewer, the gases must rise to the upper extremity, and escape into the houses through the house-drains.

It was thought that the sections of the Newport sewers were of the most approved forms, and that the bricks employed there were admirably adapted for the construction of such sewers with economy. But it was contended that there was no advantage in building brick sewers sufficiently large for a man to pass through, unless those dimensions were required to discharge the sewage flowing into them. In every instance where there were two rings of brickwork in the invert, there should be two rows of "headers" at or about the springing, so as to bond and tie the work together where the arch commenced.

In a hilly town the whole system of sewers should not be so connected together as to allow of the accumulation of the sewage gases in the higher parts of the district. Where the gradient was steeper than 1 in 200, and a sewer was one mile in length, it should be divided by steps or falls, and there should be a flap valve upon the upper or discharging end of the sewer, and at least two street grates at this point, so as to insure thorough ventilation. Where the sewage was discharged into a river, having a low summer level and a high flood level, it was not always practicable, or desirable, to carry the whole of the sewage in flood down below the summer level. In such cases the arrangement adopted at Windsor Castle might be followed. Formerly a large brick sewer discharged itself into the Thames, close to the Queen's private walk, and was a source of nuisance. By fixing a cast-iron pipe at the bottom of the sewer, and putting a slight dam in front of the junction, all the ordinary sewage was discharged by the iron pipe below the summer level. The brick sewer took away all the storm waters, which could be passed into the river with impunity, as they would be in extreme dilution, and the river itself would be in flood.

It was stated that the invert of the main outlet sewer at West Ham, which was 4 feet 6 inches in height by 4 feet in width, was laid for about half a mile at the level of low-water of spring tides, and then for 2½ miles with a fall of 3 feet per mile. The surface of the ground was from 10 feet to 12 feet below high-water in the Thames, and the subsoil was so porous, that when the trench was excavated, the water could not be pumped below a certain level. A cast-iron invert was therefore devised, and upon it cement blocks were laid to above the water line, the other portions of the sewer being built in the ordinary way. About three miles of that sewer had been in use for nearly two years, and no difficulty was found in keeping it clean, although the velocity of discharge was mainly that due to the surface gradient, or head.

As the question of town sewerage was of daily increasing importance, the principles which should be adopted might be briefly stated. Every sewer should be straight from point to point, and at every change either in the line or the gradient, there should be a manhole or a lamphole, affording means of access to the sewer, as well as providing ventilation. A cesspit should be formed at the side of each of these ventilating shafts, to catch the detritus from the roads; and the gully grate and entrance should be over it, and not directly above the crown of the sewer, as was the case in some parts of the metropolis. Between the side chamber and the shaft charcoal filters should be fixed, so as to deodorise the foul gases before passing into the streets. Sewers of unequal dimensions should never be level at the inverts: it was safer, as a rule, that they should meet at the crown. In the former case the larger sewer would dam back the sewage in the smaller tributary, and prevent its being flushed out. At Carlisle the main sewer had a fall of 1 in 700 for a mile and a quarter. It was frequently liable to be flooded, and at times the water-line was from 18 feet to 20 feet above the level of the invert. That sewer had been in operation for six or seven years without requiring any outlay for cleansing. At every manhole there was a groove in the brickwork to receive a stop-plank, by which the sewers could be flushed out in sections, either by accumulated sewage, or by the admission of water from the Water-works.

The fouling of rivers, by allowing undiluted sewage to pass into the nearest available watercourses, was a question of serious importance. It was believed that the cheapest element to remove soil refuse was water, and that the readiest method was by a proper system of sewers. If it was not worth while commercially to pump the fluids and solids, for the purpose of appropriating them to agricultural uses, then the solids should be removed by deposition and filtration, and the liquids be deodorised, before entering the rivers and water-courses. The land was the proper place to which the soil refuse should go; and if the authorities of a town could not dispose of it at a profit, they ought to be compelled to incur the necessary expenditure for carrying it to some place where it could be beneficially applied, without creating a nuisance.

It was remarked that the sewers on the south side of the River Thames were all provided with ventilators, having side catch-pits which prevented stones and mud from entering the sewers. In confirmation of the statements, as to the advantage of a supplementary pipe outlet to discharge at low water, it was mentioned that a similar arrangement had been carried out at Battersea eight or ten years ago, and subsequently at four or five other outlets of the main sewers on the south side of the River Thames. With reference to the question of cleansing sewers, it was thought that the method adopted at Dundee was complicated and expensive; and that if a greater fall had been given to the sewers, and a supply of water had been obtained occasionally, as required, from the Water Company, both the first cost of the works, and the working expenses, would have been reduced. The plan pursued in the metropolis was simpler and cheaper. In the pipe or sewer a flap valve was fixed, which could be kept closed until a head of water accumulated: when this valve was opened, the rush of water cleared away any deposit, including macadamised matter and stones.

It was contended that no system was perfect which permitted accumulations in the sewers; for if the velocity of the flowing sewage was insufficient to prevent the deposit of sand, grit, or other insoluble substances, such matter ought not to be allowed to enter the sewers; and by suitable gully traps this could be easily prevented. Street gullies should be so constructed as to prevent the entering of road detritus into the sewers, and to arrest the escape of noxious effluvia, while at the same time they should provide for the admission of a downward current of air, to aid in the ventilation of the sewer. With reference to the direction of the air passing through sewers, experiments showed, that it was sometimes with and sometimes against the sewage flow, and that it was not governed either by the velocity, or the temperature, or the direction of the sewage, but appeared to be determined by the various points of ingress and egress, and by the number of gullies and ventilating shafts.

There was still a diversity of opinion as to the proper size of sewers; but it was believed that, in ordinary town districts, calculating upon a maximum fall of rain of 1 inch in half an hour, and that it all passed directly into the sewers, the following proportions would prevent silting, if the district was thickly populated, and the house-drains were connected with the sewers:—

Diameter of Sewer.	Inclination.	Drainage Area.
6 inches.	1 in 50	240 square feet.
9 ,,	1 in 100	400 ,,
12 ,,	1 in 150	650 ,,
15 ,,	1 in 200	1,000 ,,
18 ,,	1 in 250	1,400 ,,
21 ,,	1 in 300	1,800 ,,

To this it was replied that no specific rules could be laid down which would apply to every town in the United Kingdom, each of which must be dealt with according to the local circumstances and peculiarities of the case. The character of the outlet, the rate of inclination and the nature of the surface of the ground, the rate and amount of the rainfall, the number of houses draining into the sewers, the extent of the population, and other things, all required consideration.

In reply upon the discussion it was remarked that, at Newport, the cost of a brick sewer 14 inches diameter, at a depth of 10 feet, was only 7s. 7d. per lineal yard, including junction-pipes for house-drains; and that, in the same locality, the cost of a pipe sewer 12 inches diameter would have been as much, if not more. Brick sewers sufficiently large for a man to pass through had also been built there for 11s. per lineal yard; whilst, at Dundee the average prices were stated to have been for tubular drains, 13s., and for brick sewers 33s. per lineal yard.

In conclusion, the necessity for the thorough ventilation of sewers was insisted on; and, as the only way to render sewer gases innocuous was by a large admixture of atmospheric air, there should be frequent inlets for the admission of air, as well as numerous outlets for the escape of the foul gases. With regard to the fouling of rivers, no doubt, by vastly increasing the local burdens upon trade and manufacture, means might be provided for depositing the heavy matters, and for deodorizing and disinfecting the fluid portions of sewage; but such nuisances were, to some extent, the penalty incurred for concentrating the population in dense masses; and it was hopeless to expect that the rivers in the neighbourhood of large manufacturing towns could ever be restored to the former clearness.

ARCHITECTURAL PHOTOGRAPHIC ASSOCIATION.

ILLUSTATIONS OF WELLS CATHEDRAL AND PRECINCTS.

THE object of the Architectural Photographic Association, under its present rules, is to procure and issue to subscribers photographs of subjects strictly illustrative of architecture, or of its subsidiary arts. A certain number of negatives from selected subjects are taken each year; and prints from these arranged in sets or groups, on mounts of a uniform size, inclosed in a wrapper, are issued to the subscribers, each subscription of one guinea entitling the member to one set of photographs. The subscriber may select whichever he pleases of the sets issued; or, by increasing his subscription, may take all or any number of them; but the sets cannot be divided.

Thirty-six negatives of sculpture in the west front of Wells Cathedral have been taken for the association by Messrs. Cundall & Downes, of New Bond-street; and the subscription for 1862 entitles each member to eleven prints from these negatives, mounted, and done up in a wrapper; and a descriptive account extracted from Mr. Cockerell's work on the west front of the cathedral. The two extra sets may be obtained by subscribers by extra payment.

The set before us, as issued to a subscriber, consists of a view of the west front and ten of the quatrefoils containing sculpture which occur above the lowest tier of canopies. The latter include "The Creation of Woman," the "Temptation," "St. John" (fine), "Christ amidst the Doctors," and the "Last Supper," in which the texture of the stone work is rendered in a very remarkable manner. Looked at through the hand or a roll of paper, the effect of the last is marvellous.

Subscribers for 1863, we learn, will have the right of selecting from several sets, two at least of which will contain each ten subjects from the churches of the South of France. Names should be sent in early, as the quantity of matter issued is regulated by the number of subscribers. The photographs may be seen at the Architectural Exhibition.

We have also before us a Supernumerary Publication by Messrs. Cundall & Downes, consisting of forty photographs from the same cathedral and precincts, purchasable by members of the Architectural Photographic Association at a less price than that charged to the public. It includes details from the Vicar's Close and the Deanery. An aspect of sameness at first sight is given to this collection by the fact that sixteen of the plates are devoted to the triforium and clerestory of the cathedral, and are alike in the general lines. Examination, however, shows that the details (the capitals and terminations of the vaulting shafts, and the foliage in the spandrils and the heads of the clerestory arches) differ in every plate, and form a magazine of Early English ornament.

The best plates as photographs in the particular volume before us are details of sculpture in north porch; sculptured figures from east side of north tower; some of the carvings from *misereres*; south view of entrance gateway to Close and Vicar's Hall over; and the oriel window of deanery.

These collections taken together constitute the most complete attempt yet made to illustrate the details of a building by means of photography, and deserve attention.

WORKING MEN'S CLUBS.

IN the notes which we gave on the social and sanitary condition of Manchester, as well as previously, mention was made of a working men's club which had been most successfully established in one of the Salford districts; and we have often advocated the necessity which exists for resorts in the metropolis where working men and youths connected with this class might have an opportunity of meeting for the purpose of mutual instruction and innocent amusement.

We suggested that places of meeting might be arranged in connexion with the national schools of districts, and in some instances attempts have been made in this way, but generally without any great amount of success. There are many difficulties in London. One of the chief is that want of mutual acquaintance which exists to a considerable extent in provincial towns. But the failure may also be attributed to want of fitness of the national school-rooms for this particular purpose. At Salford a permanent and constantly-increasing library is formed: there are comfortable rooms for readers, supplied with newspapers and periodicals; lectures and classes; and even the top of the premises has been made convenient for those who have been in the practice of smoking a pipe while reading their book.

There can be no doubt that the general establishment of places of this kind throughout the metropolis would be attended with great advantages; and we are glad that the experiment is being tried in various directions. Something of the kind has for some time been in existence at the Colonnade, Clare Market; and in Duck-lane, Westminster, there is a club supported by working men. Institutions of this description will always need assistance in the first instance; and in order to advance the movement, the Working Men's Club and Institute Union, as our readers know, has been formed. It has recently held one of its meetings at the Beaumont Institute, Mile-end, to promote the formation of working men's clubs and institutes in the eastern part of London. Mr. Ayrton, M.P., who took the chair, looked upon the present movement as designed to take the working classes forward; and, after the Rev. H. Solly had explained the object and plans of these institutions, the Rev. Thomas Scott, chaplain of the London Hospital, moved—"That, in the opinion of this meeting, the establishment of Working Men's Clubs and Institutes in the Tower Hamlets, on the principles of the Working Men's Club and Institute Union, is highly desirable as a powerful means of promoting the social, moral, and intellectual welfare of the working classes of the district." The resolution was seconded by the Rev. H. Rylance, and carried; and an influential committee was appointed to collect information as to suitable premises, and to report at a future meeting.

Other clergymen announced their intention to found clubs in their respective districts,—Whitechapel and elsewhere,—and expressed themselves willing to render every assistance to the provisional committee.

"OF MORALITY IN ART."

THE International Association for the Promotion of Social Science offer a medal in gold, value 300 francs, for the best essay on this subject: and M. Wiertz offers to paint the portrait of the author gratuitously. The subject is thus stated:—

"By what signs does moral decline manifest itself in literary productions?

What are the causes of this decline, and what are the results of it?

By what means can this mental deviation be corrected? The causes stated are to apply to art in general, but to literature more particularly."

METROPOLITAN BOARD OF WORKS.

AT a meeting of the Board on the 20th instant addresses of congratulation to the Queen and to the Prince of Wales, moved by Mr. Tite, were determined on. The latter says:—

"Entrusted with the external improvement of this great city we are nevertheless profoundly impressed with the high value of moral influence in effecting material ameliorations: we therefore hail with peculiar satisfaction the bright prospect of a continued display of those domestic virtues which lend additional lustre to the majesty of England by your Royal Highness's union with a lady so richly endowed as the fair Princess whom you have brought from the cradle of our race to reside among us. May your Royal Highness for long years enjoy Heaven's choicest gifts; and may you transmit to a remote posterity the teachings and example of your parents. The adornment of the chief city in Her Majesty's dominions, and the moral and physical welfare of its inhabitants, were ever subjects of deep and increasing interest to your illustrious father; and may your Royal Highness continue the development of his wise and beneficial efforts, and may you occupy and enlarge those fair realms of science and art which it was his princely ambition to promote and advance by any measure at his command. Finally, may you, like him, by the practice of every noble quality, found for yourself a deep root in the hearts of the people."

The Subway in Southwark-street.—Tenders for constructing the subway, &c., along Southwark-street, between Great Guildford-street and Blackfriars-road, were opened, and were as follow:—Pearce & Porter, 28,010*l.*; William Downes, 26,474*l.*; Hill, Fennell, & Robinson, 27,400*l.*; W. H. Roe, 25,879*l.*; W. Dethick, 26,850*l.*; Joseph Diggle, 30,000*l.*; J. W. Sawyer, 26,950*l.*; W. Moxon & Co., 27,235*l.*; Edward Thirsk, 26,669*l.*; W. Laver, 30,500*l.*; Thomas Pearson, 24,950*l.*; and Hickerston & Bailey, 26,960*l.* Mr. Thomas Pearson's tender was accepted, subject to the usual securities.

District Surveyor for St. George-in-the-East.—The board then proceeded to elect a district surveyor for the district of St. George-in-the-East, St. Botolph Without, Aldgate, and St. Paul, Shadwell. There were eleven candidates, besides three whose names were struck out of the list in consequence of their non-attendance. The choice ultimately fell upon Mr. Markham.

CHURCH-BUILDING NEWS.

East Ham (Essex).—The consecration of the church of St. John the Baptist, East Ham, took place on the 19th inst. The church is cruciform in plan, consisting of nave, transepts, chancel, and central tower, with vestry at side of chancel. It is built of Hassock, with facings of Kentish rag, and Bath stone quoins. The roofs are covered with slate, and internally plastered below the rafters, showing only the principals and chamfered ribs. The sittings are open, and fixed 2 ft. 10 in. from back to back, except those under the tower and some in the transepts, which are 3 feet. These and the other fittings are of stained deal, excepting those within the altar-rails, which are of oak. The character of the church is massive and plain throughout. The accommodation is for 486 persons, including children, and the total cost, with warming, was about 2,760*l.* The builders were Messrs. Turner & Sons, of White-street, Little Moorfields. The architect was Mr. Blomfield.

Worcester.—The great east Window of Worcester Cathedral, by Hardman, of Birmingham, which was shown at the International Exhibition, is now being inserted in its place. The whole of the ten lights are now completed, the artists having done so at their own risk, the fund not being as yet sufficient to pay them. The scraping of the Lady Chapel is nearly finished, and an effort is to be made to open the choir for divine service by Easter. The nave will now take its turn, and be overhauled completely, and the whole is to be ready by the Musical Festival of the Three Choirs, which will be held this year in Worcester.

Bolton.—The Wesleyan Chapel in Park-street, Chorley-road, has been opened for divine service. The buildings comprise the chapel and school-room, large vestry, ministers' and choir vestry, also four class-rooms in the second story over the vestries; the whole of these being grouped together; the side wall of the vestries and the north gable of the school forming a continuous line with the transept gables. Detached from these and standing at the north-west corner of the plot, will be a residence for the chapel-keeper. The total length of the principal group of buildings is 141 feet 4 inches, and the greatest breadth externally, 80 feet 4 inches. The chapel is calculated to accommodate 950 persons, and the school 260 scholars. The style adopted is Decorated Gothic, of the later period of the thirteenth and the beginning of the fourteenth centuries. Externally, the walls are faced with Yorkshire pierpoints, and the dressings of Wrexham stone. The plan of the chapel is cruciform, and comprises nave, with north and south transepts, and a chancel, in which the organ is placed. The roof of the nave is separated from those of the chancel, front of gallery, and transepts, by pointed arches, springing from carved Caen stone corbels, supported by polished pillars, those to the front gallery being granite, and the others Devonshire marble. The internal dimensions of the nave are 84 feet long and 42 feet wide, each transept 17 feet by 28 feet, and the chancel 13 feet by 26½ feet. The height from floor line to top of ridge in the nave is 56 feet 9 inches, and in the transepts and orchestra 46 feet 2 inches; the height to the wall-plate in all being 23 feet 6 inches, and the spring of roof inside about 2 feet higher. The whole of the roofs are supported by trusses springing from carved Caen stone corbels, and are open, with the exception of the upper portion of that to the nave, which has a flat ceiling at the level of the ridge to transept roofs. There is a gallery over the front vestibule. The central portion of the nave in front is separated from the south porch and staircase on the north by buttresses, those to the latter surmounted by an octagonal turret, pierced by arches on each side, supported by pillars with carved capitals, having carved cornice over, from which springs a spirelet, divided into two stages. A lightning conductor of patent copper coil, ¾-inch diameter, descends from the platina point. The height from the ground to the top of the cross is 93 feet. The large vestry is 23 feet by 16 feet, on the north side of the chancel. The ministers' vestry, 18 feet by 12 feet, with lavatory and closet attached; and the choir vestry, 11 feet by 10 feet, are on the south side of the chancel. The school-room is on the west side of the meeting vestry and chancel, 52 feet by 53 feet wide inside, with a recess 27 feet by 5 feet against the end of the latter, in which will be placed the library, with a small gallery over for a school choir. The height from floor to wall-plate is 12 feet, and to the top of ridge of roof 36 feet. The roof is open, supported by trusses springing from stone corbels. The contractor for the stonework was Mr. A. Pilling; joiner and carpenter's work, Messrs. J. B. Statham & Sons, Pendleton; plastering, painting, and varnishing, Mr. W. H. Lomas, Manchester; glazing, Mr. Edmondson, Manchester; carving, Messrs. William & S. Green, Manchester; gas-fittings and wrought-iron work, Mr. Skidmore, of Coventry. The tiles for the front vestibule, from Messrs. Minton's, have been supplied through Mr. T. Oakden, of Manchester, who also procured the granite and marble pillars. The gas-fittings and ornamental metal-work were furnished through the same agency. The heating apparatus has been

set up by Messrs. Redfern. The clerk to the works was Mr. Jepson; but Mr. George Woodhouse, the architect, has exercised a general supervision over all the works. The total outlay for the whole, exclusive of land, is about 9,500*l.*

Pendleton.—The Bethesda Chapel, Pendleton, lately re-erected by the Methodist New Connexion, on the site of an older one, has been opened. The chapel has been erected from designs by Mr. Scrivener, Hanley, and executed by Messrs. Metcalf & Waterson, Manchester. The style is Italian; the material, red bricks, with Hollington dressings and Yorkshire parpoints. In front is a portico of Hollington stone, raised some 4 feet from the road level upon a landing inlaid with encaustic tiles, approached by York steps; the capitals of the columns being Corinthian in outline, with natural foliage, supporting an entablature with cornice and balustrade, pedestals and vases. Above this are two double windows with circular heads and enriched keystones, supported by carved brackets; the spandrils being filled in with ornamented cast iron on glass. There are also single windows on each side, with keystones and scrolls, and a stone cornice, with carved cantilevers and panels run round the building, rising into a pediment in front, with carved acroteria. On each side are vestries projecting 6 or 7 feet, in the same style as the portico. The total cost has been 2,500*l.*

Stockport.—Steps have been taken to enlarge the capabilities of St. Thomas's Church—Lord Egerton of Tatton (the owner of the land required) having acceded to the proposition, and forwarded a cheque for 100*l.* towards the expense of carrying out the arrangements. These arrangements embrace a new stone chancel, one gentleman having promised to furnish it with a stained-glass window, at a cost of 500*l.*

Hollingworth (*Manchester*).—The foundation-stone of St. Mary's Church, Hollingworth, has been laid. It originated in a circular headed "A Shilling for a Church." This is the sole and simple means by which Mrs. Page (wife of the Rev. J. A. Page, incumbent of Tintwistle, in which parish the new church is situate) has already raised 1,000*l.* The church, when complete, will have cost 1,500*l.* The architects are Messrs. Clegg & Knowles, of Manchester. The church, which is in the Early English style, will consist of a nave, chancel, vestry, and porch, with a turret at the north-west angle. Accommodation is provided for 405 persons. It is hoped that the 10,000 shillings required to complete the work will soon be on their way to the lady, who has persevered in the enterprise for the last four years.

Bungay, Suffolk.—The memorial window set up in this church, and mentioned previously (p. 192), was executed by Messrs. Cox & Son, of London.

PROVINCIAL NEWS.

Shanklin.—This place, says the *Hampshire Independent*, has made another move in the way of sanitary reform. For some years past this little village has been sadly neglected in the matter of cleanliness; and as, during the last few years, the nuisances have rapidly increased, the necessary steps have been taken to remedy the evil, by first obtaining from the proper quarter a definite boundary for the district; and the villagers have also decided to adopt the Local Government Act of 1858.

Faversham.—The new almshouses are approaching completion. The chapel, which intersects the building in the centre, has already been pewed. The carving is the work of Messrs. Nettle & Sansom, architectural sculptors, Lambeth.

Leeds.—In the design first proposed for the laying out of the ground-plan of the new infirmary, says the *Intelligencer*, the building would stand with its front in the very oblique line to that of Great George's-street, turning partially towards the closely approaching row of houses in St. George's-place. A second method was proposed, by which the front of the building would be brought more nearly to a full southern aspect, and so far less oblique to Great George's-street, and the inclosure surrounding it would be a parallelogram, with rounded corners, instead of the irregular form at first assumed. This plan was opposed in public vestry on the ground of certain slight diversions of streets; and upon this the surveyor, Mr. Fox, designed a third scheme, which, while it avoids any increase of distances between different streets, appears to secure many important advantages. It places the building with its front due south, in a line with St. George's Church, and parallel with Great George's-street, leaving a space between it and the south side of the latter as deep as that in front of the Townhall, and about 100 feet longer. The whole inclosure assumes a regular elliptical form, containing about 17,000 square yards, of which the area of the building, with its internal courts, according to the architect's designs, occupies 11,000 square yards.

Carlisle.—The new workhouse plans have now arrived, says last week's *Journal*, and will be on view at the Board-room.

COMPETITIONS.

Carlisle Bridge, Dublin.—Inquiries reach us as to this competition, but we have nothing satisfactory to state in reply. The committee seem to disregard public opinion. One correspondent says:—

"I am told there is a civil engineers' college in Dublin, where everything they can lay their hands upon is copied by the pupils. Now it has occurred to me that possibly the drawings sent in for this bridge may have found their way there, and have met with the same treatment."

Plymouth Wesleyan Chapel.—After what was said on this matter, correspondents are asking how many designs were sent in?

SCHOOL-BUILDING NEWS.

Yarmouth.—The new grammar-school, now in course of erection on the Trafalgar-road, is nearly completed. It is a simple building in the Tudor style. It is built of red brick, with white brick quoins at angles, stone dressings to windows and entrance-door, projecting eaves, moulded bargeboards and finials, and with bell-turret on roof. The slating is in courses alternately plain and ornamental, finished with crested ridge. The school-room is 40 feet in length by 20 feet in width, with open timber roof stained and varnished. The building also contains entrance-porch, class-room, and the necessary offices.

Darlington.—The foundation-stone of a new school, in connexion with the Wesleyans, has been laid in the North-road, which is a rapidly-increasing part of the town. The estimated cost of the school, including land for a chapel, is 500*l.*, towards which subscriptions have been received and promised to the amount of 470*l.*

CHICHESTER CROSS, ILLUMINATED.

AMONG the illuminations in celebration of the marriage of their Royal Highnesses the Prince and Princess of Wales, none could have possibly been more effective for delicacy and magical appearance than the illumination of the interesting old Market Cross of Chichester, one of the rarest specimens of its kind in the country. On the night of the 10th of March the building presented the most enchanting appearance; indeed, it looked like a design delicately cut in the purest glass as a specimen for a building to be erected on some fairy land.

On the four faces fronting the principal streets the architectural details were minutely marked out, each being terminated by a star. The intermediate sides were less elaborated. Each pinnacle was surmounted by a fleur-de-lis. The flying buttresses were lighted with coloured lamps, and also the main pillar in the interior, the lanthorn being surmounted by a plain cross. The illumination required 15,000 jets of gas, and 2,000 feet of pipe were called into requisition. The design to represent in light the outline as well as the tracery of the principal fronts of this building, was carried out, and in a good style, by Mr. Charles Dixon, whose services for the delicate undertaking were secured by the committee of management. The Market Cross is a venerable ornament of the city, and is now one of the very few which have resisted the ravages of time and injury, or have been preserved from the demands of the modern spirit for improvement. This description of Gothic building is not frequent in England prior to the close of the fourteenth century. They answered the double purpose of piety and convenience to the inferior tradespeople, and to those who brought provisions from the farms in the neighbourhood for the supply of the city. For this benevolent purpose Bishop Edward Storey purchased of the dean and chapter and the corporation the vacant area in the centre of the city which was formed by the intersection of the four principal streets. It appears from a deed still extant that the cross was finished in about 1500. It is an octagon, with an open arcade, and buttresses with finials at the angles; and above the centre of each arch was placed a niche, which contained an effigy,—effigies of the founder and other bishops, and St. George, the patron saint of the city guild. When the Parliament army gained possession of the city, the effigies were torn down from the niches, but the escutcheon bearing the arms of Henry VII. and the founder were left undefaced. At the restoration a beautiful bronze bust of Charles I. was placed in the niche once occupied by the figure of Bishop Storey; and a clock was given by Dame Farrington, as the inscription expresses, "as an hourly memento of her good will to the city," in 1724.

The total height of the building is 50 feet. In the years 1562 and 1574, we are told, this interesting structure required repair. In 1724 the Duke of Richmond defrayed the expense of a complete restoration. It was disused as a market cross on the erection of a new market house in North-street, about sixty years ago. F. W.

THE BRIDGE OVER LUDGATE HILL.

SIR,—As the public are becoming at last aware of the intended perpetration of a bridge *over* Ludgate-hill, may I be permitted at this, the eleventh hour, to draw your attention to the fact that one of the designs recently submitted to the Corporation committee for a new bridge at Blackfriars provided against this contingency by taking the railway by tunnel *under* that thoroughfare.

There can be no question that not the slightest necessity exists for a bridge *over* it. I would add that other important features in the same design were, that it rendered the proposed new street from Blackfriars to the Mansion House totally unnecessary: it saved the bridge now to be built in close contiguity to Blackfriars Bridge for railway traffic only: it saved the ascent of Ludgate-hill to all traffic passing over the new bridge to the City: it provided against the ascents of Fleet-street, Holborn-hill, and Snow-hill, at an early or future date, as might be deemed desirable; and, in short, it combined the interests of the railway shareholder, the Thames navigation, and the public.

Then why, you will ask, is it not adopted? The reply is—Because those most interested, *i.e.*, the shareholders and the public, are entirely unacquainted both with the simple merits of the design and with the comparatively very trifling reason assigned for not carrying it into execution. METROPOLIS.

PATENTS CONNECTED WITH BUILDING.*

SHADES OR BLINDS FOR WINDOWS.—*Rev. G Scratton.*—This invention relates to improvements in shades or blinds for keeping the sun's direct rays off windows; the object being the obtainment of an improvement in the appearance of such blinds; whilst they admit a great amount of light through the windows, and permit of an agreeable prospect outwards. The improved shade or blind is composed of a series of narrow frames, covered with any suitable blind or shade material, each frame being disposed vertically, and at a shorter distance asunder, somewhat less than the width of the frame, the set forming a row in front of the window to be shaded.

IMPROVEMENTS IN APPARATUS FOR INSPECTING SMALL SEWERS AND DRAINS, AND FOR FACILITATING THE REMOVAL OF OBSTRUCTIONS THEREIN.—*J. Lovegrove.* Dated 9th June, 1862. For these purposes, in constructing, ventilating, inspection, or flushing shafts at intervals over small drains and sewers, they are constructed from the top of the sewer to the surface of the ground partly vertical and partly curved, and also in two divisions for a double shaft, so as to admit of the passing of a bamboo cane (screwed together in short lengths) down one division of the shaft, turning into and along the sewer towards the outlet for any distance, and thus to effect the removal of any obstruction that may have formed between the shaft and the distance reached; also down the second division of the shaft turning into and along the drain towards its terminal end for any distance, and thus remove any obstruction that may have formed in this portion of the sewer. In the construction of ventilating and inspection shafts over house drain-traps, they are constructed partly vertical and partly curved, and also in three divisions, so as to admit of the passing of a bamboo cane down one division of the shaft towards the outlet of the drain, or down the second division towards the terminal end of the drain, and down the third division forming a triple shaft (into the syphon dip-trap), and thus in each of the places reached to remove any obstruction that may have formed. A dip-trap and box-valve seal the foul air from the sewer.

APPARATUS FOR BURNING AMERICAN ROCK OIL, PARAFFINE OIL, &c., &c.—*J. Crisp & J. W. Elliott*, South Shields. Dated 2nd July, 1862.—The object of these improvements is to obtain security in the burning of American rock oil, paraffine oil, oil of petroleum, and other inflammable oils, spirits, or essences. The material to

* Selected from the lists in the *Engineer*, &c.

be burned is placed in a cistern or reservoir through a feed-hole, which may be closed by a screw or other plug, having an air-hole in it, which, when required, may be protected internally or externally by wire gauze. From this reservoir a pipe conveys the fluid to another tube or chamber, which is closed partially at its lower end by wire gauze, perforated lead, or other suitable substance, and is of size sufficient to receive the wick and burner. For convenience of cleaning the parts of the tubes the patentees connect them together by screw connexion. The passage at the connexion of the lower tube with the wick tube (any part of the lower tube will do) is by preference partially closed by having only a very fine perforation or perforations through it of some length, or by the application of a coil of fine wire gauze, or a bundle of wires or otherwise, through which the oil is regulated or filtered in its passage to the wick. The part of the tube occupied by the filtering media may be considerably varied to the form or construction of the apparatus. That part of the tube which holds the wick and burner is partially closed at its lower end by some perforated substance, and is made of such a depth as to allow of only a portion of the oil contained in the tubing or apparatus being consumed. By these means the interposition of a column of oil between the flame of the burning oil and the explosive vapour of the reservoir is secured.

MANUFACTURE OF GAS FOR LIGHTING AND HEATING—*F. M. Parkes*, Plumstead, Kent. Dated 14th July, 1862.—This invention consists in the manufacture of gas by the combination of the gas obtained from petroleum or rock oil (which is also known by various other names) with the gas commonly termed hydrocarbon gas, or water gas; and further in the peculiar apparatus or retort represented in the drawings.

APPARATUS FOR VAPOURIZING AND AERATING A LIQUID HYDROCARBON TO BE BURNT FOR ILLUMINATION, &c.—*O. P. Drake*, Massachusetts. This invention cannot be described without reference to the drawings.

VENTILATING AND HEATING ROOMS, TURKISH BATHS, HOTHOUSES, &c. — *J. Walton* and *J. Moore*. Dated 28th July, 1862.—This invention consists of two parts, which may be used separately or together, for ventilating and heating rooms, carriages, huts, and buildings of all kinds. When required to heat buildings, the patentees generally combine the heating arrangements with the arrangements for ventilation. The apparatus for carrying off vitiated air from a room or other building is placed at the ceiling or upper part of the room or building, and is composed of a conical tube, the larger and lower end of which opens into the room, and the smaller end either opens directly into the outer atmosphere, or communicates with it by a pipe. Through this conical tube the vitiated air escapes from the room or building. Around the conical pipe is a cylindrical pipe of larger diameter than the bottom of the conical pipe, so that there is an annular space between the bottom of the conical pipe and the bottom of the cylindrical pipe. The upper end of the cylindrical pipe also communicates with the outer atmosphere, and as vitiated air passes away from the room through the conical pipe, fresh air enters the room through the space between the bottom of the conical pipe and the bottom of the cylindrical pipe.

IMPROVEMENTS IN CEMENTS.—*C. M. Westmacott*. Dated August 12th, 1862.—For the purposes of this invention, lime is combined with unburnt limestone or chalk suitably ground or reduced to powder. The proportions may be varied; but when using very good lime, it is preferred to use at the rate of two measures of unburnt chalk or limestone to one measure of lime. This compound may be employed alone or combined with sand, plaster of Paris, clay, or other materials, according to the circumstances under which it is to be used.

BRICKS.—*R. Bell*.—A communication.—Dated 23rd July, 1862. This invention consists in certain improvements in the manufacture of bricks, by means of which they are enabled to register with each other in the process of building, and to bind the work in such manner that it shall form a mass incapable of being riven asunder or cracked. The bricks are to be formed with projections or tongues across or along one surface, and with grooves or recesses of corresponding size on the opposite side, whereby they may be laid down one on the other, with the aid of a small quantity of mortar or Portland cement, in such order as to fit or bind together, the upper layer with the lower layer, and to tie each other longitudinally and crosswise, so as to prevent any lateral or transverse deviation or fissure occurring in the work. With regard to bricks for arches, a similar system of construction is adopted, by means of which centres will not be required in the construction of arches and vaults, for as soon as one single layer of bricks has been thrown across the arch, the series may be continued by inserting the second layer into the first, into which it will register and be self-supporting, and so on with the entire length of arch or tunnel or vault.

Books Received.

Heat considered as a Mode of Motion; being a Course of Twelve Lectures delivered at the Royal Institution of Great Britain, in the Season of 1862. By JOHN TYNDALL, F.R.S., &c. With Illustrations. London: Longman & Co. 1863.

NOTWITHSTANDING the general merit of this volume, we cannot help stumbling at the threshold, over the author's definition of heat, as "a mode of *motion*." Heat, we would with diffidence submit, is more correctly definable as a mode *of force*, productive of repulsive and other forms of motion. Let us take the force of steam for example. How can the heat which actuates the steam, which fills to bursting a hermetically sealed glass tube, be, with strict propriety, called "a mode of motion," at all events till it do issue forth in actual motion? It is a kind of repulsive force which tends on certain occasions to burst out into various modes of motion; and so soon as it becomes more strictly entitled to be called a mode of motion, it at that very moment, in fact, begins to cease to be entitled to be called a mode of force; being on the way to expenditure and exhaustion as a force. Heat is an active power, force, or energy, productive of motion; and even latent heat, though a latent force, cannot very properly be merely regarded as a mode of motion till it be expelled from its latency, and made salient and exhaustive. Professor Tyndall himself, in the body of his work, not unfrequently calls heat a force, a power, &c., and connected with the ultimate particles of matter; and in doing so we think he is more correct than he is in his title-page, which ought to be indicative of what his subject most strictly speaking is. Moreover, such a title, we think, scarcely does justice to Professor Tyndall's ingenious exposition and experimental proof, that heat is not only a mode of force—repulsive force,—but is *producible by* other modes of mere force, on the one hand, and *productive of* other modes of force on the other: nor does it do justice, on the whole, to the theory on which the entire work is based,—a theory much of the credit of which the author ascribes to Mr. Mayer, a German, of whose ideas, as rendered by Professor Tyndall, we gave an abstract at the time one of the Professor's lectures on the subject was delivered. But whether heat be regarded as a mode of motion or a mode of force or energy, its real natnre cannot be thoroughly understood until we ascertain its precise relationship to the interior organism of matter. Since it is a repulsive force connected with the minuter and more substructural forms of matter, and not a mere material fluid as it was once regarded; and since men of science find that to a satisfactory explanation of chemical, crystallographic, and other natural phenomena, they must necessarily admit the existence of a series of correlated and interdependent regions interior to masses, such as they call atoms, molecules, crystlets, particles, &c.; an interesting and momentous question immediately presents itself, so far as regards heat as *one* form of repulsive force interior to the masses composed of such particles, crystlets, molecules, or atoms: that question is,—does heat, as a repulsive force, belong more especially to the atomal form, to the molecular form composed of these atoms, to the crystletular form composed of these molecules; or in fact, *is* heat the repulsive force of atoms in molecules? is it the repulsive force of molecules in crystlets? or is it the repulsive force of crystlets in the grosser particles subject, also, to the attractive force of cohesion? It is useless to object that the repulsive force of molecules in crystlets is just another form of the repulsive force of atoms in molecules: so is it with light, heat, and actinic force: the one may be said, and has been said, to be just a form or mode of the other; but here we have hold of precisely those very reasons which, we do believe, afford us the true explanation of the correlation of powers or forces: that correlation is so associated with the correlation of substructural and superstructural forms in nature, that the one is dependent on the other; so that some have maintained, like Leslie, that light and heat were one and the same thing; but if one and the same thing, that is, radiative or repulsive force, why are they so different in manifestation? Simply because the one is radiative or repulsive force manifesting itself in one substructural region of matter, and the other is repulsive or radiative force manifesting itself in an adjoining and interdependent region of matter.

The forms and the powers of nature are mutually correlated, just as the forms *per se* mutually are, and just as the powers *per se* mutually are. We cannot here enter farther into this highly important and interesting question; but we may refer our readers to an article in the *Builder* of 11th November, 1854, on Electricity, in which the writer's ideas will be found to be already more fully developed. Meantime, we would wish here to add, that until the precise relationship of heat to the atomal, molecular, and other interior forms of matter *be* ascertained, the precise laws of its action, and its equivalents in mechanical or other force, are not likely to be very satisfactorily worked out.

Apart from any profound theoretical or philosophical discussion of the question "What is heat?" Professor Tyndall's new volume is a most valuable one, in which a vast array of facts, old and new, in regard to heat, are experimentally and popularly illustrated, in such a way as to be not only clear and easily understandable, but highly instructive.

Miscellanea.

MR. JAMES CRAIGG, an Englishman, has been appointed civil engineer in the service of the Sultan of Morocco, with a salary of 800*l.* a year.

THE FINE ARTS IN BRISTOL.—The private view of the Academy of Fine Arts and the Graphic Conversazione are reported in last week's Bristol papers. The *Mirror* says,—This year the exhibition has exceeded in every respect any of its predecessors. The works of great painters are numerous and important, and our local artists have contributed a collection which establishes, if such were necessary, their claim to consideration and regard. We will, however, allude first to the graphic room, which was the main attraction on Tuesday evening's conversazione. The vestibule leading to the rooms, as also the entrance-hall, were adorned with a choice collection of plants, kindly lent by Mr. W. Tothill, of Stoke, other persons contributing. The visitors to the graphic room had their attention arrested by some remarkable paintings, which were placed in the vestibule. One was the celebrated work of Noel Paton, entitled "Hesperus." There are many works by local artists which indicate great skill and ability. The conversazione was most successful, and attended by a large and fashionable company.

THE FRESCOES IN THE HOUSES OF PARLIAMENT. In reply to Mr. C. Bentinck, in the Commons, recently, Mr. Cowper explained that the fine arts committee having been intrusted last year with an inquiry into the decay and unaccountable deterioration in the frescoes in the house, and more particularly those in the upper waiting-hall; the commission had committed the inquiry to eminent connoisseurs, who united a practical acquaintance with fresco painting with the general cultivation of the arts; Mr. Ruskin, Mr. L'Estrange, Mr. Gambier Parry, and Mr. Hoffman, being on this committee. These gentlemen had examined very minutely into the state of the wall-paintings in the building, and also examined the artists who painted them. Many causes for the decay were suggested to them, such as the influence of the gas on the paintings, and the possibility of the artists having painted on the lime after it was dryer than it ought to have been to receive the paint. But the committee were unable to arrive at any satisfactory conclusion. The fine arts committee had brought their labours to an end, and had made their final report, which would be submitted shortly to the House, and therefore they would not be able to assist further in the solution of the difficult problem. He might say, however, the money voted for fresco painting would not, in future, be spent upon the same method of painting as that in which the decay had hitherto occurred. It would be employed in painting according to the water-glass method, which had been found to lead to no deterioration.

PROPOSED WET DOCK AT WHITEHAVEN.—The trustees of the town and harbour of Whitehaven have received a report from Mr. A. M. Rendal, C.E., in reference to their projected wet dock. Mr. Rendal calculates that the various items of the cost of the plan, which he describes, will amount to a sum total of 154,000*l*. From this has to be deducted the value of old materials, estimated at 5,000*l*., still leaving 149,000*l*. to be raised to carry out the provisions of his scheme. This is for dock space of six acres.

THE HOLBORN-VALLEY NUISANCE.—A correspondent says,—"In your journal of October 18th, 1851, 'Architecturus' writes, alluding to the Holborn valley, 'How much longer is this gigantic nuisance to disgrace the metropolis of the greatest city in the world? A tenth-rate railway company would have solved the question twenty times over.' Twelve years have elapsed since this was written, and the gigantic nuisance not only exists, but increases year by year with the increase of traffic; and the question which a tenth-rate railway company would have solved twenty times over still defies the combined powers of the Board of Works and the corporation of the city of London."

THAMES EMBANKMENT, SOUTH SIDE.—The bill defines the works authorised as follows;—An embankment from Gunhouse-alley, near the London Gas-works, to Bishop's-walk, with an enlargement of the bed of the river by excavation of the land and removal of the wharf walls from Gunhouse-alley to Broad-street; a new street from the embankment to Vauxhall-row; a viaduct from Bishop's-walk to Westminster Bridge; a new street from Bishop's-walk to Palace-new-road. A clause authorises the construction of barge beds and basins, with entrances from the Thames under the embankment, for the purpose of diminishing the inconvenience that may be caused to wharfingers.

IMPROVEMENTS IN THE REGENT'S PARK.—By direction of the Chief Commissioner of Works floral decorations and garden walks are being introduced in the smaller or inner park, running between the road from the Welsh Lodge to the Park-crescent and Portland-place. On either side of the continuation of the broad walk in this (the lesser) park there existed four rows or avenues of trees. The two centre avenues have now been removed, and between the outer rows there is in course of construction, on the western side of the broad walk, an arrangement of flower beds and walks. In the centre of this floral avenue, which from its extreme points south and north is upwards of a quarter of mile in length, is erected a vase, supported upon the shoulders of griffins. Throughout the whole line, at intervals, other vases and flower-beds are introduced.

FAILURE OF A DOCK WALL IN LIVERPOOL.—Last week, the workmen engaged in the arrangements to complete the communication between the Canada Dock and the one immediately to the north of it were alarmed by observing that a considerable fissure had taken place along the line of the east wall of the dock named. They immediately communicated the fact to Mr. Lyster, the engineer to the Dock Board, who attended to see what was the cause of the fissure referred to, and to take means, as far as possible, for counteracting its extension. The stonework which had been put up to effect the separation between the dock and basin had been removed, and the stones—large masses of masonry—piled along the east quay—of the Canada Dock. Either owing to the superincumbent weight thus placed on the quay, or through the withdrawal of the counter-balancing weight of the water in front of the breast wall, the wall began to bulge towards the west: portions of the earth immediately behind the wall began to crack, crumble, and fall down; and to meet the emergency water was at once let into the dock, and steps were taken to lighten the superincumbent weight on the quay. Investigation showed that a sewer which ran along the dock wall, which, in fact, was made a springer for the sewer arch, had given way, the crown of the arch having fallen in in several places. A cesspool connected with the sewer was found to be torn and distorted, and large cracks, as well as a sinking of a quay wall, were evident in the centre, extending for a length of 100 feet. Further investigation showed that the falling portion of the wall was built originally on a treacherous foundation of clay, it is said, on shifting sand, and that on a previous occasion indications of failure in the wall had been manifested. Measures are now being adopted to remedy the defect.

GAS IN PORTUGAL.—The contract for lighting the city of Lisbon with gas will terminate in 1866, and the municipal authorities wish to open a competition for the public lighting, in order to have the service performed at a lower rate than at present. By the existing contract the city pays 28 dollars per annum for each of the three thousand two hundred lamps. This price they hope to reduce at least 20 per cent.

SOCIETY FOR THE ENCOURAGEMENT OF THE FINE ARTS.—At a meeting of this society, held on Monday evening last, Mr. Henry Ottley read a lecture upon "The Present Position of the Royal Academy." The appointment of the Royal Commission to inquire into that institution, he said, was a great fact, whatever might be its results; but whatever those results were to eventuate in, the promotion of the welfare of the arts and of its professors solely depended on the artists themselves, who must take the lead if the public were to take up the question.

FATAL FALL OF MACHINERY AT MILLWALL.—A man has been killed at the Millwall Iron Ship Building Company's Works, Ferry-road, on Monday last, under the following circumstances:—He was raising an iron caisson for the abutment of a bridge by means of large shears. The shears had three legs, two of which were of iron and the third of wood. When the great weight came on the shears, the wooden leg, which proved to have been decayed, gave way, and the whole machine fell over upon a building behind it, and crushed in the roof. When the iron fragments were removed, part of it was found resting on deceased's face. Deceased was a smith. He died in the hospital to which he was removed. The inquest has been adjourned in order to have the machinery and premises in question examined by a competent civil engineer.

INTERESTING DISCOVERY IN THE CASTLE OF NORTHAMPTON.—In the course of the excavations going on within the area of the castle, at the east end of the inner ballium, inclining northwards, the excavators have come upon the remains of a very early Norman building. A circular pier, 3 feet 10 inches diameter and 4 feet 6 inches in height, has been cleared. It is in excellent preservation, and is wrought of the red native ironstone. The shaft is in parts of a bright red, as if it had been subjected to the action of violent heat. Heaps of stones, some of which were evidently the voussoirs of an arch, were turned up in the immediate neighbourhood, red also with fire. Great quantities of stones, wrought and unwrought, are unearthed in these excavations, and the evidence is strong that large buildings on the site were destroyed by fire and by violence. When the survey of the castle was made in 1323, the commissioners appear to have found it in a generally dilapidated condition. The local *Mercury* thinks that it can scarcely be doubted that these excavations open again to daylight the scene of the identical destruction by Richard de Lemesey, described upwards of five hundred years ago.

SCHOOL STOVES.—A correspondent of the *Dumfries Courier* calls attention to a brick stove for equably and economically heating a schoolroom or country church or mansion. It is the same in material and principle as a German stove. Being constructed of brick, and no iron required excepting for the furnace bars and doors, it is not expensive. For a good sized schoolroom the dimensions may be about as follows:—Length, 4 feet 8 inches; breadth, 3 feet 8 inches; height, 3 feet 8 inches. The principle of it is by sending the flame and hot air from the furnace through a continuation of small flues to arrest the heat before it escapes by the chimney; and, being so arrested and detained in the brickwork, it is given off gradually to the air that comes in contact with the heated material, and continues to be given off long after the fuel is consumed. There are three flues in the length of it, the first crossing, the second recrossing, the third crossing again. The flue current then ascends to an upper set of flues of similar construction; and by repeating a similar course of crossings, terminates in the sixth flue which is above the first, and from which sixth one it escapes into the chimney by an opening in the brickwork by which the fireplace is built up. The stove stands clear of the wall, also of the floor, being set on brick feet; and there are, as far as can be, vertical vacant spaces between the three double sets of flues in order to admit the air as much as possible to contact with the heated brick. The side walls are built of common fire-bricks; the tops and bottoms of the flues of fire-brick flags. The whole cost for the above size, he says, may be from 6*l*. to 8*l*.

INACCURACY OF THE ORDNANCE MAPS.—Half a dozen correspondents confirm the assertion of this in our last. One says: "I have procured dry impressions from the plates, to obviate the shrinking from the damping of the ordinary impressions, and in the large scale, *sixty inches*, the sheets will not correspond by many feet."

JOINT-STOCK ENTERPRISE.—A return just issued shows that in 1862 no less than 465 new companies were formed in the three kingdoms under the Act 18 and 19 Victoria, c. 133, and the Companies Act 1862, with a total nominal capital of 27,306,200*l*. Except in one or two instances, however, there is no return of the paid-up capital of these companies. Of this total of 465, ten were dissolved or otherwise ceased to be in operation during the year.

VISIT TO THE MIDDLE LEVEL MAIN SEWER.—On Wednesday, the vestrymen and other gentlemen connected with the parish of St. Leonard, Shoreditch, were afforded the opportunity of inspecting the Middle Level main sewer, by the courtesy of Messrs. Brassey, Ogilvie, and Harrison, the contractors, with the sanction of the Metropolitan Board of Works. This sewer forms part of the works now being carried on by the Metropolitan Board of Works for the main drainage of the metropolis, and extends from Kensal-green, through Norland Town, and along the Uxbridge-road, Oxford-street, King's-road, and Liquorpond-street, near which it intercepts the Fleet, and thence proceeds through Clerkenwell to Old-street, St. Luke's, and through Shoreditch and Bethnal-green to Old Ford, and thence to the Thames at Barking Creek, receiving in its course the sewage of an area of 17 square miles.

NEW ADELPHI THEATRE.—The arrangement of "Aurora Floyd, the Banker's Daughter," made by Mr. B. Webster, jun., and produced here under the direction of his father, is much more in keeping with the novel than the version of it produced at the Princess's. Miss Avonia Jones, notwithstanding her unhappy mouthing, presents the self-willed, energetic *Aurora* of the authoress; and Mr. Billington is really the rough, honest, hearty *John Mellish* described, which cannot be said in respect of the very clever actress and actor at the other house. The great part of the piece here, as elsewhere, is that of "The Softy," made up and played by Mr. Webster in a very remarkable manner, and as more knave than fool. The assumption is perfect. Mrs. Billington plays the crafty and malevolent housekeeper remarkably well. Some of the scenery is effective and clever, particularly the Wood by Moonlight, showing also the interior of the Trainer's Lodge. It is to be wished, however, that the scenic artist here would sometimes paint with less than a "pound brush." A little more refinement is greatly to be desired. The piece as a whole is very successful, and will fill the house for some time to come.

LONDON GENERAL OMNIBUS COMPANY.—The directors of this company state in their report that the debts and liabilities of the company on the 31st of December, 1861, were 96,070*l*., and at the close of the year 1862 they were 64,025*l*., showing a decrease of 32,045*l*. The amount of borrowed money on the 31st of December, 1861, was 38,131*l*., and during the year the sum of 18,981*l*. was paid off, leaving a balance of 19,150*l*. The number of horses possessed by the company on the 31st of December was 6,630, or 239 in excess of the stock at the close of the previous year. During the time of the Exhibition traffic the service employed about 600 horses more than were required for the ordinary business of the company. The cost of the maintenance of horse stock amounted to 38,806*l*., whereas, in 1861, the cost was 39,767*l*., showing, notwithstanding the heavy work of the Exhibition season, a reduction of 960*l*. The revenue account shows that the gross receipts from all sources during 1862 were 681,553*l*.; and in 1861, 597,013*l*., showing an increase of 84,540*l*. The gross expenditure of the company in 1862 was 609,050*l*.; and in 1861, 583,789*l*., showing an increase of 25,261*l*., leaving a difference in favour of the year 1862 of 59,278*l*., and a net profit for the year 1862 of 72,503*l*. The number of passengers carried last year was 42,768,248, and miles run 12,331,715. The average number of omnibuses working daily was 602, and the number of horses 6,680. The receipt per mile run was 1s. 1d. against 11¾d. in 1861, and the fare per passenger 4d. against 3¼d. The gross earnings per omnibus per day were 3*l*. 2s. 1d. against 2*l*. 15s. 5d. in 1861. The directors propose to declare a dividend of 3s. per share free of income-tax, amounting to 22,279*l*., and leaving 606*l*.

"HINDERANCE."—With reference to the spelling of this word an esteemed correspondent writes,—"Is not *hindrance* now spelt *minus* the central *e*? and yet you retain it, see page" so and so. It certainly is now often spelt without the central *e*, but it is wrong to do so for all that, and the sooner the vulgarism is abandoned the better. *Hindrance* may have something to do with hind, or hindmost, but certainly does not spell hin-derance, a good Saxon word of three syllables, which ought not to be maimed.

THE GERMAN HOSPITAL, DALSTON.—A meeting of the governors of the German Hospital has been held at the London Tavern, the Duke of Cambridge presiding, to consider a plan for the building of a new hospital, drawn up by Professor Donaldson, the architect appointed to erect the new building. Professor Donaldson explained the plan of the proposed new building, which would accommodate some 100 patients, and would probably cost 14,000*l*. The plan was unanimously accepted, and a resolution was passed empowering the committee to carry it out without delay, the meeting pledging themselves to use their utmost exertions to collect the sum still wanting (less than one-half the sum), to avoid the necessity of encroaching upon the funded property.

DRINKING-FOUNTAIN MOVEMENT.—At Leamington, on the 10th inst., the foundation-stone of a drinking-fountain, to be erected by public subscription, was laid by Dr. Jephson, in commemoration of the marriage of their Royal Highnesses the Prince and Princess of Wales, and to be called the "Prince's Fountain." It will be for the supply of both fresh and spa water, being placed against the abutment of the London and North-Western Railway Viaduct, which crosses one of the principal streets in the town, beneath which there is a saline spring. The erection will be of polished granite, black marble, and different coloured stones from Derbyshire. The design was presented by Mr. A. Morgan, C.E., under whose superintendence the work is being carried out.

TELEGRAPHING WITHOUT WIRES.—It is said that a "Mr. H., of Kensington Park-gardens East," has tried the experiment between Brighton and his town house, and between Limerick and London; and that Messrs. Masterman & Uppill, the solicitors of the patentees, declare they have accomplished the same feat. Whether the method be the same with that some years since successfully tried across Portsmouth Harbour, and at Dundee across the Tay, we do not know; but, at all events, the *Court Journal*, which speaks of these new experiments, is not quite correct in the boast that *it* was the first to startle the world with an intimation of the alleged discovery. There is this difference, however, between the Dundee and Portsmouth experiments on the one hand, and the *Court Journal's* announcement on the other, that in the former case the *modus operandi* was known, and not limited to mysterious paragraphs which explain nothing.

THE WALNUT TREE.—There is no tree grown in this country so valuable, and I am sorry to say so neglected, as the common walnut. Before the introduction of mahogany the walnut was the cabinet-maker's tree in Britain, and no tree was better adapted for his purpose, being tough and strong in proportion to its weight, beautifully variegated, admitting of a fine polish, durable, and obtained of sizes sufficiently large to be used solid or cut into veneers: in fact, there is no introduced tree that bears the climate so well that is so valuable to the manufacturer of fine furniture. It is grown in immense quantities in the east of France and the south of Germany, and in Switzerland. There is hardly any other timber tree in the plains of Bergstrasse, which run parallel to the Rhine between the Nekar and Mayn; and notwithstanding its abundance, it is so prized by cabinet-makers and manufacturers of firearms for gun and pistol stocks, for which it is preferred to all other woods, that it fetches in our markets a much higher price than mahogany. In sheltered situations and in good land it grows rapidly, and is, under ordinary circumstances, of a fit size for felling when from sixty to seventy years, just about the age when other deciduous trees are fit for use. I had four trees blown down by a storm a few years ago, for which I received 100*l*., being at the rate of 25*l*. each. At the same time I sold forty larch and twenty spruce of the same age as the walnut for 105*l*., being only a shade above 1s. per foot for the larch, and a little more than 6d. per foot for the spruce. I have planted 700 walnuts within these three years.—*A correspondent of the Scottish Farmer.*

THE COPPER TRADE.—It appears that, with copper at its present price, a large number of mines which were paying cost have been compelled to resume their position in the list of calling mines; and from the appearance of the market, and the continually increasing supply of copper, that materially higher rates than those at present ruling cannot reasonably be looked forward to for some time. Extraordinary discoveries of copper in sandstone, it is said, have recently been made at New Jersey.

ATLANTIC TELEGRAPH COMPANY.—The annual report just issued states that the directors have advanced from their private resources such sums as have been necessary in order to keep intact the privileges and concessions of the company, and provide for other expenses incidental towards the subscription of a new capital. The latter consists of a maximum nominal amount of 600,000*l*., divided into shares of 5*l*. each. It is guaranteed 8 per cent. per annum by the British Government on the completion and during the working of the cable. The board believe that the 600,000*l*. guaranteed by the Government will be in excess of the sum actually needed to make and lay a suitable cable. When the subscriptions reach 300,000*l*. an allotment will be made. The capital account shows that 474,226*l*. have been expended, leaving a balance in hand of 615*l*.

BRICK-KILNS A NUISANCE.—At York a case, Shaw *v.* Underwood, has been tried on the Northern Circuit before Mr. Baron Martin, in which the declaration alleged that the defendant caused to issue from a brick-kiln on his land smoke and noxious fumes, which occasioned damage to adjoining land of the plaintiff's. According to the plaintiff's account the fumes from the kiln destroyed the grass in the field, stripped his hedges, and turned his white cows black. On cross-examination the plaintiff admitted that he had a brick-kiln of his own about 500 yards from the spot in question, and that there were eight or nine brick-kilns belonging to other persons in the immediate neighbourhood. He had been obliged on some occasions to pay compensation for injuries done by the fumes of his own brick-kilns. The Judge told the jury that a recent decision in the Exchequer Chamber had made it quite plain that the existence of other brick-kilns in the neighbourhood did not justify the defendant in creating a nuisance. The main question for them to consider was, the amount of compensation to which the plaintiff was entitled. Verdict for the plaintiff.—Damages 3*l*., in addition to 3*l*. paid into court.

MONUMENTAL.—A bust of the Prince of Wales, in plaster, has recently been executed by Mr. Marshall Wood. It is proposed that four copies shall be made in marble, to be supplied to the Guildhall of London, and the Town-halls of Manchester, Liverpool, and Montreal respectively. The bust stands about 3 feet 3 inches in height. It has been executed from sittings given by the Prince, and is, we believe, the only bust for which his Royal Highness has sat in this country.——Mr. Earle has just finished a seated statue of her Majesty in Sicilian marble, which is to be placed in the People's Park, at Hull.——A full-length statuette in wood of Mr. John Clayton, town clerk of Newcastle, has been executed by Mr. Gerrard Robinson, and has been on view in the Central Exchange News-room. Mr. Clayton is represented standing clad in his official robes, with the right arm raised and extended, and the head thrown back as if in the act of addressing an assemblage.——The King of Prussia has laid the foundation stone of a monument to Frederic William III. The site chosen is on the Lustgarten. The Princess Royal of England was present.——The Berlin architect Diebitsch, according to the *Parthenon*, has received an order, from Said Pasha's successor on the throne of Egypt, to execute a most splendid mausoleum for the late Viceroy.——Fraucis Joseph of Austria is going to erect a statue to Maria Theresa in Vienna, and its site is to be the outer Burgthor. The sketch, already finished, shows the Empress sitting in a carriage drawn by four horses.——We hear with regret that the proposition to erect in London a counterpart of the equestrian statue of Lord Hardinge by Mr. Foley, R.A., sent to India, has been given up, the subscription not proceeding favourably.

TENDERS.

For additions to house, Wray Park, Reigate. Mr. Reddall, architect.

Holdsworth	£727 10 0
Macers	698 0 0
Thornton	695 0 0
Scott	695 0 0

For St. Bees' Catholic Church, Whitehaven, for the Very Rev. E. G. Lynas. Mr. E. Welby Pugin, architect:—

Nelson	£7,144 0 0
Simpson	6,582 5 6
Cousins	5,300 0 0
Glaister	5,250 0 0
Davies	5,130 0 0

For the addition of a north wing to the St. Pancras Almshouses. Mr. H. Baker, architect. Quantities supplied by Messrs. J. C. & G. Lansdown.—

Nutt & Co.	£3,543 0 0
I'Anson	3,137 0 0
Conder	3,078 0 0
Dove, Brothers	3,075 0 0
Baugh & Bryant	2,819 0 0
Tracey & Co.	2,798 0 0
Scrivener & White	2,590 0 0
Walton	2,487 0 0
Rowe (accepted)	2,400 0 0

For warehouse, Milk-street, Cheapside, for Messrs. Charles & Thomas. Mr. Herbert Ford, architect. Quantities not supplied:—

Masey	£1,693 0 0
Fish	1,524 0 0
Henshaw	1,498 0 0
Anley	1,442 0 0
Brass	1,438 0 0
Coleman	1,289 0 0
Simms	1,247 0 0
Lark	1,187 0 0
Rawlings	1,037 0 0

For Model Lodging-houses, Golden-lane, St. Luke's. Mr. J. Taylor, architect:—

Anley	£1,325 0 0
Parkiss	1,277 0 0
Perry	1,250 0 0
Henshaw	1,228 0 0
Richardson	1,190 0 0
Green	1,140 0 0
Meers	1,083 0 0

For Spring Hill New Schools, Birmingham. Mr. F. D. Johnson, architect:—

Hardwick & Son	£480 0 0
Showell	471 0 0
Heywood	459 0 0
Barnsley & Son	449 10 0
Partridge	435 0 0
W. & B. N. Smith	398 0 0
Bennett	398 0 0

For alterations and repairs for Lieut.-Col. Wheatley, at 16, Wilton-street, Eaton-square. Mr. H. Lester, architect.—

Hardiman & Sandon (accepted)	£690 0 0

For pulling down and rebuilding 38 and 39, Eastcheap, Messrs. Young & Son, architects:—

Meyers & Son	£5,123 0 0
Mansfield	5,059 0 0
Little	4,867 0 0
Lawrence & Son	4,840 0 0
Lark	4,829 0 0
Ashby & Son	4,757 0 0
Carter & Son	4,687 0 0
Conder	4,645 0 0
Coleman	4,549 0 0
Hardiman & Sandon	4,464 0 0
Axford	4,356 0 0
Piper & Wheeler	4,319 0 0

For cabinet show-rooms, for Messrs. Goodehams, of Tonbridge Wells. Mr. W. Bond, architect:—

Perigoe	£842 0 0
Pink	815 13 0
Noakes	787 11 0
Mercer & Camfield	780 0 0
Elliott	773 10 0
Edwards	765 0 0
Jeffery	716 0 0
Strange (accepted)	692 16 3

For three houses at King-street, Covent Garden. Mr. John Wimbeard, architect. Quantities supplied by Messrs. Jarvis & Barrett:—

Axford	£3,975 0 0
Turner	3,887 0 0
Foster	3,758 0 0
Macey	3,749 0 0
Colls & Co.	3,733 0 0
Browne & Robinson	3,695 0 0
Simms	3,694 0 0
Jackson & Shaw	3,665 0 0
Thompson	3,375 0 0

For the erection of new buildings at Chelmsford, Essex, for Messrs. W. & J. Beach. Mr. George Elkington, architect:—

Thorn	£3,344 0 0
Moss	2,676 0 0
Roper	2,510 0 0
Wood & Munn	2,530 0 0
Wells	2,520 0 0
Brown (accepted)	2,490 0 0

For alterations and additions to house, Market-place, Reading, for Mr. J. T. Stransom. Mr. Wm. Brown, architect:—

Sheppard	£229 0 0
Dunn	227 15 0
Woodroffe	225 0 0
Matthews (accepted)	220 0 0

TO CORRESPONDENTS.

We are compelled to decline pointing out books, and giving addresses.

All statements of facts, lists of tenders, &c., must be accompanied by the name and address of the sender; not necessarily for publication.

NOTE.—*The responsibility of signed articles, and papers read at public meetings, rests, of course, with the authors.*

Advertisements cannot be received for the current week's issue later than **FIVE o'clock, p.m.,** *on Thursday.*

☞ *NOTICE. — All Communications respecting Advertisements, Subscriptions, &c., should be addressed to "The Publisher of the Builder," No. 1, York-street, Covent Garden. All other Communications should be addressed to the "Editor," and* NOT *to the "Publisher."*

The "*Daily News*" of May 29th, in its description of Benson's Great Clock, says: "The entire finish is of the highest cast." Benson's new Show Rooms contain clocks designed by the first artists of the day, and include clocks for the drawing-room, dining-room, bedroom, library, hall, staircase, bracket, carriage, church, turret, railways, warehouse, counting-house, with musical, astronomical, and every description of clock, from the plainest to the highest quality of which the art is at present capable. Church and turret clocks specially estimated for. Benson's illustrated pamphlet on clocks and watches (free by post for two stamps), contains a short history of clock and watchmaking, with descriptions and prices; it acts as a guide in the purchase of a clock or watch, and enables those who live in Scotland, Ireland, Wales, the Colonies, India, or any part of the world to select a clock. J. W. Benson received a Prize Medal and honourable mention. 33 and 34, Ludgate Hill, London. Established 1749.—[Advt.]

ADVERTISEMENTS.

CAUTION.—To BANKERS, BILL BROKERS, and OTHERS.—Whereas Bills of Exchange or Promissory Notes have been and may be put in circulation by Mr. Daniel Pearson, purporting to be accepted or made by Messrs. "Lloyd, Pearson, & Lloyds," or "The Madeley Coal and Iron Company," of Madeley, in Staffordshire. And whereas the Partnership between Messrs. Lloyds and Mr. Daniel Pearson has been duly dissolved, and an injunction has been granted by the Court of Chancery to restrain the said Daniel Pearson from drawing, accepting, endorsing, giving, or negotiating any Bill of Exchange or Promissory Note in the name of "The Madeley Coal and Iron Company," or in the name of "Lloyd, Pearson, & Lloyds," or in any other name whereby the Messrs. Lloyds might be rendered liable. All persons are therefore cautioned against dealing with any such Bills of Exchange or Promissory Notes; and it is requested that any attempts to negotiate the same may be immediately given to Messrs. R. & S. MULLENS, Solicitors, No. 7, Poultry, London, E.C.; or to Messrs. S. F. MILLER & SON, Solicitors, 10, Duke-street, St. James's, S.W.
London, 18th March, 1863.

ARTISTIC COLOURIST and LITHOGRAPHER,
No. 21, MONTAGUE-STREET, RUSSELL-SQUARE, W.C.
Competition and every description of Architectural, Working, and Detail Drawings prepared.

JOINT-STOCK COMPANIES.—CONFIDENTIAL ADVICE and (if required) PROFESSIONAL ASSISTANCE given to any bonâ fide undertaking, by Mr. LEE STEVENS, 36, Cannon-street, E.C.

TO MASTER PAINTERS, DECORATORS, &c.
PARTNERSHIP.—WANTED, by a Young Man, as JUNIOR WORKING PARTNER, having a small capital at command, and thoroughly acquainted with the general business.—For further particulars, address, ARTISAN King's Head Inn, Grendon, Atherstone, Warwick.

AN energetic BUILDER'S CLERK WANTED. One who can measure and value work, and can keep the books in a Builder's Office.—Apply first by letter, stating where last engaged, age, and salary required, to A. T. M. Post-office, 98, Jermyn street, S.W.

CLERK of WORKS.—WANTED, by the Guardians of the Poor of the Parish of Saint Leonard, Shoreditch, Middlesex, a Thoroughly-practical and Experienced CLERK of WORKS, to superintend, under the direction of the Architect and Surveyor, Mr. WM. LEE, the erection of the new Workhouse for the said Parish. Salary, £1 per week. Candidates must attend personally, with written applications, stating their age and the works they have been engaged on, and also testimonials as to ability and character, at the Workhouse, Kingsland-road, London, N.E, on WEDNESDAY, the 8th of APRIL, 1863, at SIX o'clock in the evening precisely.
By order of the Board, WM. NIGHTINGALE, Clerk.
Clerk's Offices, Workhouse, 26th March, 1863.

FARRINGDON UNION, BERKS.—To ARCHITECTS and SURVEYORS.—The Board of Guardians of the above Union having decided to make rather extensive alterations in their Workhouse, desire the SERVICES of a competent ARCHITECT to advise them on the best mode of effecting such alterations. Architects willing to inspect the workhouse, and furnish the Board with a plan and estimate, are invited to apply for information to the Clerk to the Board. The Architect whose plan is selected will be paid the usual commission; but no remuneration will be allowed to unsuccessful competitors, nor do the Guardians pledge themselves to the acceptance of either of the plans submitted. The plan and estimate to be sent, under seal, to the Clerk, on or before the 14th of APRIL next.—By order of the Board,
Farringdon, 17th March, 1863. GEO. J. HAINES, Clerk.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

By Her Majesty's Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at where great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for underslates at the Royal Agricultural Society's House in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and in lengths best suited to their roofs. The original works were the above roofing is made are F. McNEILL & CO'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

1851. **TERRA-COTTA WORKS,** 1862.

BLACKFRIARS ROAD,
LONDON, S.

MARK H. BLANCHARD & CO.
SUCCESSORS TO COADES.

Original Works established 1769. Terra cotta Manufacturers to Her Majesty, the Commissioners of 1851, the Board of Works, the Trinity House, the Admiralty, the Royal Horticultural Society, and the Departments of Science and Art, South Kensington, and the Recipient of the Prize Medal at the 1851 Exhibition for MATERIAL and WORKMANSHIP in TERRA-COTTA, and the only Recipient of Two Prize Medals at the 1862 Exhibition for TERRA-COTTA and POTTERY, have the honour to inform the Nobility, Gentry, Architects, and others, that they can be SUPPLIED from the above Works with every article in this imperishable and invaluable Material in Sculptural and Architectural Embellishments, suitable to the Palace, Mansion, or Cottage, which will be found to be unequalled in price, quality, and durability; and the Works of this Establishment have stood the test of time.

A beautiful variety of Statues, Statuettes, Vases, Panels, Fountains, Flower-pots, Balustrade Terminals, and other Adornments, suitable for the Conservatory, Flower Garden, and Grounds, at prices unprecedented. Estimates furnished.

An Illustrated Priced Catalogue will be forwarded upon the receipt of eight postage stamps.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent which they sell under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for the finest work.

CHEAPNESS. Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASE IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

BUILDING LAND.—Some valuable FRONTAGES to high roads can be had on most advantageous terms, offering unusual opportunities for persons of energy and small capital to quickly realize large profits.—Apply to Mr. PEACHEY, Surveyor, 4, Pall-mall. Advances will be made.

PREMISES WANTED, on Lease, with spacious Yard, suitable for a Builder and Mason. In the neighbourhood of West Smithfield preferred, or a PIECE of GROUND on building lease.—Address stating lowest terms, and all other particulars, to Messrs. MALLCOTT, BROTHERS, Masons, Builders, &c. 51, West-street, West Smithfield.

TO ARCHITECTS and SURVEYORS.—OFFICES in the House of a Solicitor, near the British Museum, are OFFERED. Mutual business arrangements might be effected, particularly with a gentleman acquainted with benefit building, or similar societies.—Apply to C. D. or personally, 6, Caroline-street, Bedford-square, W.C.

LAND TO BE LET for BUILDING, seven miles from London, on high ground, within ten minutes' walk of the Ealing Station of the Great Western Railway.—For particulars apply to GEO. LESLIE, Upper Mall, Hammersmith, W.

A SUBURBAN RESIDENCE WANTED, within ten miles of Charing cross, possessing easy railway communication with the Victoria, Waterloo, or Charing-cross stations. It is necessary that the house should stand upon a gravelly soil, that the front should face the north, and that it should be provided with a piece of ground at the back. Seven or eight rooms are required, and the rent should range between 50l. and 80l. per annum.—Address, stating all particulars, to J. W. O. 6, Charing-cross.

BUILDING LAND, Wimbledon.—TO BE LET, on 99 years' lease, a Plot of FREEHOLD BUILDING LAND, situate on the Ridgway, the high road to Kingston, commanding extensive and magnificent views of the Surrey Hills, Worcester Park, and the Valley of the Wandle. It is about one mile from the station, and near a church.—Apply to Mr. W. M. OGDEN, Land Agent and Surveyor, Wimbledon, S.W.

BUILDING GROUND, near the Crystal Palace.—SITES for TWO VILLAS TO BE LET, within five minutes' walk of the Crystal Palace and Railway-station, commanding very extensive views. The above will be let on advantageous terms, and money advanced, if required, to a builder of respectability. For particulars apply to Mr. COLMAN, Surveyor, Portland Lodge, Canterbury-road, Brixton-road, S.

LAND TO BE LET, on Building Leases, at Woodgreen, fronting the high road from London to Southgate, near Woodgreen Station, Great Northern Railway.—Apply to Mr. DAVIS, Builder, Woodgreen; or S. HEWITT, Architect, 101, Great Russell street, Bloomsbury, W.C.

FREEHOLD SITES for BUILDING, and FREEHOLD HOUSES, can be obtained in the best part of Prince Albert's-road, near Kensington Gore, in front of the Royal Horticultural Gardens.—Apply to C. J. RICHARDSON, Architect, 47, Prince Albert's-road, W.

TO BUILDERS and OTHERS.—Valuable BUILDING LAND TO BE LET at Putney, on the main road, near the Railway Station. Term, 99 years; subsoil gravel. Advances will be made to respectable parties.—For plans and particulars apply to J. H. ROWLEY, Esq. Architect, 17, St Helen's-place, E.C.

FREEHOLD or LEASEHOLD LAND WANTED.—The Vestry of the Parish of St. Mary Abbotts, Kensington, in the County of Middlesex, require a DEPOT, situated in the said Parish, for STONE and other materials; the land to be from a quarter to half an acre in extent. All further information on the subject can be obtained on application to Mr. JAMES BROADBRIDGE, the Vestry's Surveyor, Vestry Hall, High street, Kensington. Proposals containing full particulars, and endorsed, "Tender for Depot," to be addressed to the Clerk, and delivered at his Office, by or before TEN o'clock, on FRIDAY morning, the 10th day of APRIL next.—By order, REUBEN GREEN, Clerk of the Vestry.
Vestry Hall, Kensington, 20th March, 1863.

WATERSIDE PREMISES WANTED, to Rent or Purchase.—The Vestry of the Parish of St. Mary Abbotts, Kensington, in the County of Middlesex, require Waterside Premises at the nearest point possible to the said Parish, having a River Frontage of not less than 80 feet, for the purpose of unloading road and other materials. All further information on the subject can be obtained on application to Mr. JAMES BROADBRIDGE, the Vestry's Surveyor, High-street, Kensington. Proposals containing full particulars, and endorsed "Tender for Waterside Premises," to be addressed to the Clerk, and delivered at his Office by or before TEN o'clock on FRIDAY morning, the 10th day of APRIL next.—By order REUBEN GREEN, Clerk of the Vestry.
Vestry Hall, Kensington, 20th March, 1863.

WATERSIDE PREMISES, on the Lea Canal near Bow, comprising two newly built Warehouses, of a total area of about 22,600 feet, with large yard, shaft, foreman's dwelling, stabling, &c TO BE LET, together or separately, with immediate possession.—Apply to Messrs. DEBENHAM & TEWSON, 80, Cheapside.

Cornelius Paine, jun. esq.	Noel Whiting, esq.

Thomas Tallemach, esq. *Secretary.* Samuel Brown, esq. *Actuary.*

LIFE DEPARTMENT.—Under the provisions of an Act of Parliament, the Company now offers to new Insurers EIGHTY PER CENT. OF THE PROFITS, AT QUINQUENNIAL DIVISIONS, OR A LOW RATE OF PREMIUM without participation of Profits.

Since the establishment of the Company in 1821, the amount of Profits allotted to the Assured has exceeded in Cash value 680,000l. which represents upwards of Reversionary Bonuses of 1,058,000l.

After the Division of Profits at Christmas 1861, the Life Assurances in force, with existing Bonuses thereon, amounted to upwards of 4,730,000l. the Income from the Life Branch 207,000l. per annum, and the Life Assurance Fund, independent of the Capital, exceeded 1,050,000l.

LOCAL MILITIA and VOLUNTEER CORPS.—No extra premium is required for service therein.

LOANS granted on Life Policies to the extent of their values, if such value be not less than 50l.

ASSIGNMENTS of POLICIES.—Written notices of, received and registered.

MEDICAL FEES paid by the Company, and no charge for Policy Stamps.

Notice is hereby given, That Fire Policies which expire at Lady Day must be renewed within fifteen days at this Office, or with Mr. SAMS, No. 1, St. James's-street, corner of Pall-mall; or with the Company's Agents throughout the kingdom; otherwise they become void.

Losses caused by Explosion of Gas are admitted by this Company.

NORWICH UNION FIRE INSURANCE SOCIETY.
Notice. LADY-DAY RENEWALS.
Mercantile and Dock Insurances at the Reduced Rates.
The losses of the Company for the year 1862 were 76,000 less.
The duty paid to Government for the year 1861 was 83,076l. and the amount insured on farming stock 16,480,702
A bonus of three-fifths of the profits periodically made to parties insuring, who have thus from time to time received sums amounting in the aggregate to 491,200l.
The rates of premium are in no case higher than those charged by the other principal offices making no returns to their insurers.
For prospectuses, apply at the Society's Offices, Surrey-street, Norwich, and 6, Crescent, New Bridge-street, Blackfriars, E.C.

THE CITY of MANCHESTER PATENT BRICK & TILE COMPANY, LIMITED (EFFERTZ'S PATENT). Capital, 5,000l. in 10,000 shares of 5l. each. Deposit, 10s. per share on application, and 10s. per share on allotment. Registered under the Companies Act of 1862, with limited liability.
DIRECTORS.
W. NICHOLSON, Esq. Chairman.
(late Managing Director of the London and Manchester Glass Company).
W. Routledge, esq. (Messrs. Routledge & Communey).
F. Hessemer, esq (Messrs. W. F. Higson & Co.).
R. Tomlinson, esq. (Messrs. Tomlinson & Jones)
E. J. Hughes, esq. (Messrs. Hughes & Bloodworth).
W. Weild, esq. C.E. Queen's Chambers, Market street.
Charles M'Cunn, esq. Market-street.
CONSULTING ENGINEER. W. Weild, esq. C.E.
SUPERINTENDING ENGINEER.—Peter Effertz, esq. C.E. (the Patentee).
SOLICITORS.—Messrs. Atkinson, Saunders, & Co.
BANKERS.—Messrs. Cunliffe, Brooks, & Co.

The Directors having now completed their preliminary arrangements, and the Company being duly registered, are prepared to receive and execute orders forthwith, both for the machines (under royalty), bricks, tiles, and drain-pipes.

The Directors very confidently invite application for the remaining shares. A considerable number are already subscribed for, and an allotment will be shortly made.

The Directors reserve to themselves the right to limit the first issue of shares.

With machines made under this patent, bricks can be produced superior to hand-made, at one half the present prices.

The machines may be seen at work on application. Samples of bricks, tiles, and drain pipes, can also be seen at the Company's Offices, where forms of application for shares and further information may be had.

I. J. S. HUGHES, Secretary.
India Buildings, Cross-street, Manchester.

ACCIDENTS
By ROAD, RIVER, or RAILWAY;
Accidents in the Field, the Streets, or at Home,
MAY BE PROVIDED AGAINST by taking a POLICY of the
RAILWAY PASSENGERS' ASSURANCE COMPANY,
64, CORNHILL, LONDON.
£140,000 have been already PAID as COMPENSATION for Accidents of all kinds.
In Seventy-five Fatal Cases, and 6,980 Cases of Personal Injury.
Rates and further Particulars may be obtained at the Railway Stations, of the Local Agents, or of the
HEAD OFFICE, 64, CORNHILL, LONDON, E.C.
WILLIAM J. VIAN, Secretary.
Railway Passengers' Assurance Company, empowered by Special Act of Parliament, 1849.

CLERICAL, MEDICAL, and GENERAL LIFE ASSURANCE SOCIETY,
13, ST. JAMES'S SQUARE, LONDON, S.W.
ESTABLISHED 1824.

Financial Results of the Society's operations.

The Annual Income exceeds	240,000l
The Assurance Fund safely invested is over	1,240,000l
New Annual Premiums for the last year	10,617l.
Bonus added to Policies at the last Division	276,077l.
Total Claims by death paid	1,241,750l.

The following are among the distinctive features of the Society:—
Credit System. On Policies for the whole of life, one half of the Annual Premium during the first five years may remain on credit, and may either continue as a debt on the Policy, or be paid off at any time.
Low Rates of Premium for Young Lives, with early participation in Profits.
Invalid Lives may be assured at Premiums proportioned to the increased risk.
Prompt settlement of Claims.—Claims paid thirty days after proof of death.
The Accounts and Balance Sheets are at all times open to the inspection of the Assured, or of persons proposing to assure.
Tables of Rates and Forms of Proposal can be obtained from any of the Society's Agents, or of
GEORGE CUTCLIFFE, Actuary and Secretary.

The Reversionary Bonus at the Quinquennial Division in 1862 averaged 48 per cent. and the Cash Bonus 28 per cent. on the Premiums paid in the five years.
The next division of Profits will take place in January, 1867.

FOR SALE, a Strong BUILDER'S TRUCK, in good condition, at PERRIAM'S, Dealer, 43, Wells-street, Oxford-street, W.

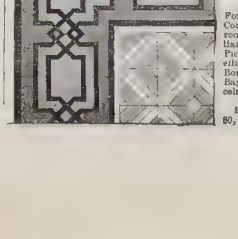
HAY'S PATENT WATERPROOF GLUE and INDIA-RUBBER VARNISH.—To ARCHITECTS, BUILDERS, PAPER-HANGERS, &c. &c.—The WATER-PROOF GLUE is a special anti-damp, and is suitable for contractors, joiners, coffin-makers, &c. &c. The VARNISH for damp walls, previous to papering, coating zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Booth, contractors, Gosport:—



"We have repeatedly used your Waterproof Glue as a preventive against damp, and have found it in every instance in preparing walls to receive paper. In one instance, where the walls were thoroughly saturated with moisture from earth piled against the outside, we used your varnish internally, and papered the surface, within a few hours of its being applied, with complete success. We have also used your preparation for coating a large number of cast-iron piles, at the Gunwharf, Portsea, for her Majesty's War Department."

To be had from all Ironmongers, Oil and Colourmen, &c.
Manufactory, Chandos-street, Portsmouth: Mr. GEORGE WEEKS, Manager. GEORGE C. WARDEN & CO. General Agents, 12, London-street, London, E.C. where specimens of its application can be seen.

LITTLE CASTERTON FREESTONE.
Apply for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn street, W.
This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

TWO PRIZE MEDALS OBTAINED at the INTERNATIONAL EXHIBITION—Architects, Contractors, and Builders, before ordering CHIMNEYPIECES, should inspect the Extensive STOCK of ENAMELLED SLATE CHIMNEYPIECES (which, for beauty of design and moderate prices, defy competition), at the LLANGOLLEN SLAB and SLATE COMPANY'S WHARF, 4, South Wharf road, Praed street, Paddington, W.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand from above or below Bridge, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks, Lime, and Old Bricks. Dry rubbish delivered, per barge, in any quantity alongside the Thames.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building Purposes. Supplies direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 27, Millbank-street, London, S.W.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION
MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts, the Prize Medal at the Great Exhibition, 1851, Two First-class Medals at the Paris Exhibition, and Two Prize Medals at the International Exhibition of 1862.
Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.
Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works 39 and 40, Upper Belgrave-place, Pimlico, S.W.

GUERNSEY GRANITE.—Broken or in Spalls, delivered in London or Outports.—CHARLES M. MANUELLE, Granite and Stone Agent, 3, Railway place, Fenchurch-street, London.

POLONCEAU and LIMMER ASPHALTE.

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving Stables (as shown above), the absence of joints preventing the generation of ammonia. For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish street-hill, London, E.C.
Country Builders supplied with Asphalte in Bulk for covering Foolings, Barn Floors, &c. with instructions to lay it down.

TO CLERGYMEN, CHURCHWARDENS, BUILDERS, and OTHERS.—TO BE DISPOSED OF immediately, the massive CARVED OAK ALTAR-PIECE and WALL PANELLINGS, as at present fixed in the chancel of St. St Nicholas Church, Newbury, Berks, together with about 5½ feet lineal of Oak Altar Railing; the whole in a good state of preservation. The work is of the Corinthian order, and includes four well-proportioned detached fluted columns, with carved capitals, entablature, and pediments. The Decalogue is written on four raised and gilded panels, and there are also two paintings on panels of Moses and Aaron. The width of the altar-piece is about 23 feet, by 15 feet extreme height. For further particulars, apply to Messrs. ADEY & SON, Builders, Newbury.

LARCH FIR TIMBER.—RAILWAY CONTRACTORS and OTHERS.—FOR SALE, about 1,200 Superior Larch Fir Timber Trees, averaging 20 feet meetings, and many trees 2 feet through. Well situated for land and water carriage.—For particulars apply to Messrs. LEANEY & CAREY, Timber Merchants, Tunbridge Wells.

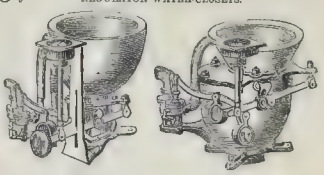
London House, Mr. THOMAS BEGGS



ESKHOLME'S PATENT PNEUMATIC REGULATOR and VALVE CLOSET.

Suitable for first and second class houses, being most efficient and simple, free from all smell, and requires no cisterns, service boxes cranks, wires, or levers, but is complete in itself ready for attachment to any ordinary house service pipes. It is supplied in three qualities, all equally efficient, differing only as to the style of fitting up. A second class quality is also manufactured. The Regulators are usefully applied to the ordinary Pan Closet, alike dispensing with all cisterns, service boxes, levers, cranks, wires, &c. The Regulator is supplied separately, as well as connected to ordinary direct Service Main Cottage Water Closets.

J. TYLOR & SONS' PATENT

REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply pipe. No extra valves, cranks, or wires required. The Valve can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Patentees, J. TYLOR & SONS, Warwick lane, Newgate street, London.

MINTON, HOLLINS, & CO. Stoke-upon-

Trent, beg to inform architects, the gentry, and others, that, in consequence of the increasing demand for their Encaustic and Mosaic Pavements, and with the view of facilitating the execution of orders, they have opened an additional Show-room, at their Establishment, No 39, Cockspur street, London, where experienced draughtsmen will be constantly in attendance, to afford all information required.

DRAWINGS and ESTIMATES, on the receipt of plans, will also be promptly furnished, on application at the Manufactory, Stoke-upon-Trent.

MINTON & CO. take the present opportunity of stating that they have always in stock a large and varied assortment of tiles, suitable for flower boxes, stoves, and other ornamental purposes.

MINTON & CO. further give notice, that they have no special depôt in London for their general productions in china, majolica and earthenware, but the same may be obtained of all the principal dealers.

TERRA COTTA and Fine STONEWARE

POTTERY, warranted to stand Frost.

JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economised the manufacture of TERRA COTTA and FINE STONEWARE FOR ARCHITECTURAL PURPOSES. He is able to make any of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite.

A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."

Moulded Bricks, String Courses, Copings, Cills, Trusses, Pilasters, Capitals, Crosses, Pennnales, Vases, Statues, Brackets, Consoles, Garden Edging, Coloured Six-inch, and twelve inch Paving Tiles, &c. &c.

Also, Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.

London Office, 377, Oxford-street, W.

N.B.—The sale will commence precisely at THREE o'clock.

Darley Hall, near Barnsley, March 2nd, 1863.

ADDISCOMBE, CROYDON.—Excellent Building Materials.

MR. WHITTINGHAM is instructed to SELL by AUCTION, on the PREMISES, close to the town of Croydon, on MONDAY, MARCH 30th, 1863, at TWELVE for ONE o'clock, the fourteenth portion of the sound BUILDING MATERIALS of some of the buildings belonging to the Addiscombe College, consisting of about 100,000 stock bricks, a quantity of bats, stone window sills, &c. doors, windows, joists, beams, flooring and roofing boards, &c. May be viewed, the materials prior and on the day of sale; and catalogues may be obtained of the Foreman, on the Estate; and of the Auctioneer, 14, Moorgate-street, City, E.C.

FREEHOLD GROUND between the Forest Hill and Sydenham Stations TO BE LET on long Building Leases.—For plan and particulars, apply to C. F. REEKS, Esq. Architect, 12, Middle Scotland-yard, S.W.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LENT for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is 400 yards only from the Estate, and the City may be reached in twenty-five minutes The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston; some very eligible SITES in the Grove-road, Mile-end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street.

SUTTON, near the Station. —PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for ninety-nine years —For plans, &c. apply by post, pre-paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

EXTENSIVE MANUFACTURING PREMISES, SOUTHWARK —TO BE LET on LEASE, extensive MANUFACTURING PREMISES, occupying a very large area situate in the Borough-road, Southwark. The buildings, which are very substantially erected, comprise a very large factory of three lofty floors, with basement, a smaller factory of four floors adjoining, a very spacious and lofty ground-floor factory, yard, a capital family residence and offices, two gateway entrances, and three dwelling-houses, fronting the Borough-road, Nos. 77, 78, and 79, which can be readily let off if desired.—For further particulars apply on the Premises; or to Messrs. FULLER & HORSEY, Billiter-street, Fenchurch-street, E.C.

PHILBROKE ESTATE, at Leytonstone, on the Woodford and Loughton Railway, twenty minutes from Fenchurch and Bishopsgate-streets. This valuable FREEHOLD ESTATE (land-tax redeemed), surrounding the Station, healthy locality, gravelly soil, excellent drainage, water and gas laid down, roads made, and can be dug on the estate, it is proposed TO LET in Plots suitable for building detached and semi-detached villas. Repeated applications have been made for houses in this neighbourhood. For terms, apply to Mr. ATHEY, at the Surveyor's Office, Philbroke Estate, Leytonstone, Essex.

TO BUILDERS, &c.—A PLOT of FREEHOLD BUILDING LAND for SALE, near the New Church, Cattenham Park, Wimbledon; also a PLOT adjoining the Dunsford Villas, fronting the Merton-road, Wandsworth, Surrey, containing nearly one acre each —For plans, &c apply to Mr. W. C. POOLE, 11, Great Smith-street, Westminster, S.W.

EXTENSIVE MANUFACTURING PREMISES, Whitechapel —TO BE LET or SOLD, together or separately, the extensive and important range of PREMISES, recently occupied as the Whitechapel Distillery, with land adjoining if required. The buildings, many of which are of great extent, are most substantially erected, principally in 1845, and are very conveniently arranged for almost any manufacturing purpose. There are three distinct gateway entrances, and the out buildings on all sides are surrounded with paved yards. The total area is about three acres, exclusive of six acres of accumulation land, which may be had if required. There is an Artesian well which affords a constant and unlimited supply of pure water —Further particulars, and cards to view, may be had of Messrs. TENNANT & HARLEY, 3, Union, Raymond's-buildings, Gray's inn; and of Messrs. FULLER & HORSEY, Billiter-street, E.C. where plans of the property may be seen.

FREEHOLD GROUND TO BE LET, term ninety-nine years.—A most desirable frontage of about 160 feet, for good shops, in a first class situation, near to the Lark Hall Tavern, Clapham, at a low ground rent —Apply to Mr J. THOMAS, Architect and Surveyor, 10, Denmark-street, Camberwell.

SAINT HELEN'S, LANCASHIRE.—TO BE LET, on Lease, the extensive MANUFACTURING PREMISES known as the Ravenhead Copper Smelting Works, situate at St. Helen's, with a wharf, and a branch of the St. Helen's Railway running through the property. The entire site is about 20 acres, of which about 5 acres are occupied by the works, the remainder being available for future use The buildings comprise a series of very substantially erected, solid, and lofty ground-floor factories, arranged for the purposes of copper and silver smelting works, but they would be suitable for many other large manufacturing establishments, as they possess the advantages of direct communication by rail or water carriage with all parts of the kingdom. Coals can be obtained in this neighbourhood at an almost nominal price, and labour is cheap and abundant —For particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.; and Messrs. HARRISON & FINCH, 2, Gray's inn, London.

LARGE MANSION WANTED, to Rent or Purchase, containing from 30 to 40 rooms, surrounded by a few acres of ground, within 10 miles of London, and near a railway station.—Apply, stating terms, to A. A. care of Davies & Co. Advertising Agents, Finch-lane, Cornhill.

TO BUILDERS and OTHERS.—TO BE LET, several PLOTS of BUILDING LAND, situate in the best part of Stoke Newington, where Leases are in great demand. Bricks supplied on the estate at a low price. Sand may be raised on the ground for building purposes.—Apply to Mr ROBDA, at the Estate Office, Rowsome-road, Church-street, Stoke Newington.

GREENWICH. —TO BE LET, by the Drapers' Company, BUILDING GROUND and HOUSES situate near the Railway Terminus, at Greenwich —Further particulars may be had on application to Mr. at the Clerk's Office, Drapers' Hall, Throgmorton street; or of Mr. HERBERT WILLIAMS, Surveyor, 62, Old Broad-street.

BUILDING LAND TO BE LET, Saville-row, Walworth, Surrey, within five minutes' walk of the Elephant and Castle, contiguous to the Chatham and Dover Railway station, and abutting on the high road leading from London to Camberwell —The Trustees of the late Mr. Saville are prepared to receive PROPOSALS for the whole or any part of their ESTATE, lying between Saville-row and Gloucester-row, for the ERECTION of DWELLING-HOUSES, SHOPS, or other BUILDINGS, on a building lease or leases, for eighty years, land-tax redeemed The estate having been laid out in sewers in the most approved and modern manner, and drained, so that the estate is now ready for immediate building operations —For part plans, in lots of Mr. W. M. TOWLE, Solicitor and Conveyancer, Falmouth-road, London Bridge; and at the Office of Mr. RICHARD SUTER, Architect and Surveyor, 23, Fenchurch street, where plans and conditions may be seen.

ELIGIBLE BUILDING LAND TO LET, on 99 years' Lease; some in Kentish Town, close to intended line of Midland Railway; other close to a railway station seven miles from town, cash Address Apply to THOMAS NUNN & SONS, 21, Lamb's Conduit street, W.C.

LAYHAM, near HADLEIGH, SUFFOLK. BY Order of the Secretary of State for India in Council. Notice is hereby given, that TEN JUNIOR APPOINTMENTS in the Engineer Establishment of the Department of Public Works in India will, in the year 1863, be open to public competition.

A Competitive Examination will, accordingly, be held in this Office in the month of JUNE next. Full printed particulars of the conditions on which candidates will be admitted to the Examination, and also respecting the nature of the appointments to be competed for, may be obtained at this Office, on application, either personally or by letter. (Signed) T. G. BARING.

India Office, 28th June, 1862.

N.B.—All communications to be addressed to the "Under Secretary of State for India."

CAUTION.—To BANKERS, BILL BROKERS, and OTHERS.—Whereas Bills of Exchange or Promissory Notes have been and may be put in circulation by Mr Daniel Pearson, purporting to be accepted or made by Messrs "Lloyd, Pearson, & Lloyds," or "The Madeley Coal and Iron Company," or in the name of Madeley, in Staffordshire And whereas the Partnership between Messrs. Lloyds and Mr. Daniel Pearson has been duly dissolved, and an Injunction has been granted by the Court of Chancery to restrain the said Daniel Pearson from drawing, accepting, endorsing, giving, or negotiating any Bill of Exchange or Promissory Note in the name of "The Madeley Coal and Iron Company," or in the name of "Lloyd, Pearson, & Lloyds," or in any other name whereby the Messrs. Lloyds might be rendered liable All persons are therefore cautioned against dealing with any such Bills of Exchange or Promissory Notes; and it is requested that any attempts to negotiate the same may be immediately given to Messrs. R. & S. MULLENS, Solicitors, No. 7, Poultry, London, E.C.

COMPETITIONS.

TO STONE CARVERS.—Drawing Competitions.—Open to all of the above profession.—The Society of Ornamental Sculptors offer premiums for designs of a Capital in Natural Foliage conventionally treated. The dimensions of such to be on a ten-inch column.—1st prize, 2*l*.; 2nd, 1*l*. 5*s*.; 3rd, 15*s*. To be sent in under motto, accompanied by sealed letters, stating name and address, to No. 9, Bedwell street, corner of Esher street, Westminster, S.W. JAMES GARDNER, Secretary

N.B. No drawing received after the 1st of JUNE.

TO SCULPTORS.—The Executive Committee of the Oastler Monument will be glad to receive DESIGNS and PROPOSALS from sculptors, for a MONUMENT to the late Richard Oastler, and proposes to be erected in Bradford. The statue is to be placed upon a pedestal, in a speaking attitude, and to have, at the base, small figures of flying infants supporting the great philanthropist to receive their gratuities. The cost of the Statue, which is expected to be colossal, is not to exceed 1,000*l*. and the design not approved would have the preference of the committee. The committee are open to receive a DESIGN for a FIGURE, in marble, under a Gothic canopy, with groups of factory children in basso-relievo on the pedestal.—Communications may be addressed to W. WALKER, Esq. Bolling Hall, Bradford, the Chairman of the Executive Committee.

Bradford, March 4, 1863

India Office, 31st March, 1863.

DESIGN for COMPETITION. EUROPEAN GENERAL HOSPITAL.

The Bombay Government are prepared to receive DESIGNS for a new EUROPEAN GENERAL HOSPITAL, to be built on the Esplanade, Bombay.

Lithographed copies of the general plan of the accommodation required, with a schedule of measurements according to the arrangements of the building, which have been generally approved by the Medical Authorities and Government, together with plans of the proposed site, can be had on application at the Office of the Superintending Engineer, Presidency Circle, Bombay, and at the India Office, London.

The rates on which the work is to be calculated will also be furnished at those Offices, and the gross estimate is not to exceed Rupees 3,80,000.

Complete plans and estimates are also required for Residencies for the Surgeon and House Surgeon, and for Quarters for Eight Sick Officers, to be arranged in two or three blocks distinct from, but in the immediate vicinity of the main Hospital.

The designs of these buildings should harmonize in character and style with the main building.

The estimate for these, calculated on the same rates, should not exceed 1,35,000 Rupees.

There must be ample provision for through ventilation, which is obtained in Bombay by a sea breeze blowing generally from W. to S.W. during the months from May till September, and from various points from N.W. by N. to S.W. by S. during the rest of the year; provision should be made to exclude the N. and E. winds, which blow most frequently by night.

The walls must be protected as far as possible from the direct rays of the sun.

The designs are unrestricted as to style, provided it is suited to the climate and to the use to which the building is to be devoted, and as to materials, provided that they are procurable in Bombay at prices which will admit of their being used in the building as designed.

The designs must include—

1 Ground plan and plan of each story.

2 Elevation of each of the four faces.

The plans and elevations to be on a scale of not less than 10 feet to an inch; specification and estimate with sections, &c. in sufficient detail to enable the judges to decide whether the plan can be carried out within the sum allowed.

Prizes will be awarded for the two best designs Rs 2,500 for the best, and Rs 1,500 for the next in merit, provided the design fairly fulfils the above conditions.

If the best designs, in an artistic point of view, fail to fulfil any one of the above essential conditions, the Judges will be empowered to reduce or withhold the prize; and no prize will be awarded to a design merely because it fulfils the conditions, if otherwise conspicuously deficient in artistic merit.

The drawings and estimates, &c. should be sent in on or before SEPTEMBER 1st, in the usual manner with mottos, and envelopes containing the name and address of the artist, to the Superintending Engineer Presidency Circle, by whom the envelopes will be opened, in presence of the Chief Engineer and Secretary to Government Public Works Department, after the prizes have been adjudged.

All the designs received will be exhibited in the Town Hall, Bombay, for one month before the Judges make their awards, and, unless claimed and removed by the authors, for one month afterwards.

The envelope containing the name should state the author's wish whether the name should be appended to the design when exhibited after the adjudication.

The prizes will be adjudged by the Executive Committee of Port Improvement Commission and the Engineers of the Great Indian Peninsular and Bombay and Baroda Railways, who will be asked to aid Government in the adjudication.

In the event of any design being finally adopted by Government for execution without further modification than is made by the designer at the instance of Government, the prize will be made up to one per cent. on the amount of the estimate as revised by the Executive Committee.

It will be optional to Government to avail themselves of the services of the author in altering or executing any design which gains a prize or premium, any length which prize or premium is awarded will retain the absolute property of Government.

Unsuccessful designs will be returned to the authors if claimed by them, or by their authorized agents, within one month from the period of adjudication, during which period, if not claimed, they will remain exhibited in the Town Hall, Bombay

By order of his Excellency the Governor in Council,
H. RIVERS, Lieut. Colonel, R.E.
Secretary to Government.

Bombay Castle, 12th February, 1863.

CONTRACTS.

EXTENSION of TIME for RECEIVING TENDERS.—To BUILDERS.—Persons desirous of TENDERING for the ERECTION of a MANSION, at Saltburn by the-Sea, may inspect plans, specifications, &c. and obtain bills of quantities, at the Office of Mr. CUTHBERT BRODRICK, 2, Park-place, Leeds, on and after MONDAY, APRIL the 6th. Bills of quantities may also be obtained at the Office of Mr. BALAM, surveyor, 10, Buckingham street, Strand, London, W.C. Tenders to be sent to the Secretary's Office, Darlington, on or before THURSDAY, the 9th day of APRIL, 1863. The Company do not bind themselves to accept the lowest or any Tender.

THOS. MACNAY, Secretary.

Darlington, March 21st, 1863

[For remainder of Contracts see next Page.

CONTRACTS.

TO BUILDERS, STONEMASONS, and OTHERS.—RE-TORATION of SAINT ANDREW'S HALL, Norwich. The Town Council of the City of Norwich are prepared to receive separate TENDERS for the undermentioned WORKS, which are required to be undertaken and completed within a limited time, under the direction of Mr. THOMAS D. BARRY, City Surveyor :—

No. 1 Taking down the east wall of nave, and the erection of new stone in its and such therein. Removing paint from the stonework, and thoroughly scraping and restoring the whole of the columns and responds, as well as the arches, caps, and bases of nave and the shafts clerestory.

No. 2.—Taking down, removing, and altering orchestra, with platform for organ and making boarded inclosure at back of organ.

No. 3.—Taking down the low buildings at west end, and the whole of the west wall and buttresses of the hall, including the rebuilding of the west end and south porch.

No. 4.—Restoring, refacing, and repairing the north and south walls and buttresses.

No. 5.—Reading new committee rooms and covered corridor.

No. 6.—Restoring the whole of the ground floor windows.

No. 7.—Plastering, &c., to the interior of hall.

No. 8.—Renewing the whole of the present roofs, and fixing and complete new roofs in lieu thereof.

The plans and specifications for the several works may be seen and further particulars obtained at the City Surveyor's Office, 24, Castle Meadow, Norwich, on and after TUESDAY next, the 31st instant. Sealed, endorsed "Restoration of St. Andrew's Hall," and describing the contract by numbers, as above set forth, to be sent to the Office, Guildhall, not later than ELEVEN o'clock in the forenoon of THURSDAY, the 9th of APRIL next.—By order,

W. L. MENDHAM Town Clerk.

Guildhall, Norwich, 26th March, 1863.

KINGSTON-UPON-HULL LOCAL BOARD of HEALTH.—To CONTRACTORS.—The Local Board of Health of Kingston-upon-Hull are prepared to receive TENDERS for the OUTFALL DRAINAGE of the WEST DISTRICT of the Borough of Hull, comprising the construction of upwards of four miles of brick sewers and other works in connection therewith. Trial shafts have been sunk on the proposed lines of sewers, the results of which may be seen, with the plans of the intended works, on application to Mr. J. FOX SHARP, C.E., Surveyor to the Local Board, at his Office, Scale-gates-hall, Hull, where also copies of the specification, forms of tender, and bills of quantities may be obtained on payment of two guineas (to be returned to parties tendering in accordance with the specification), on and after THURSDAY, the 26th inst. Sealed Tenders, endorsed "West District Drainage," addressed to the Chairman of the Committee of Works, Scale-gate hall, Hull, must be forwarded on or before THURSDAY, 30th APRIL, 1863. The Board do not bind themselves to accept the lowest or any Tender.—By order,

Hull, April 2nd, 1863. C. S. TODD, Clerk to the Board.

METROPOLITAN IMPROVEMENTS.—BUILDING LAND in the Parish of Mile-end Old Town.—The Metropolitan Board of Works hereby give Notice, that they will meet at their Office in Spring-gardens, Charing-cross, on WEDNESDAY, the 15th day of MAY now next, at TWELVE o'clock at noon precisely, and will be prepared to open TENDERS by parties who may be willing to take on Building Leases all, or any, certain PLOTS of GROUND situate on the east and west sides of the new street leading from Limehouse to the Bow road, and numbered from No. 10 to 89, inclusive, on the plan of the street—Particulars, conditions, and form of Tender, and every information, may be obtained in the Superintending Architect's Office, at the Office of the Board, any day between the hours of NINE in and FOUR p.m. The Tenders must be on the printed forms supplied at the Office of the Board, and be delivered, under sealed covers, endorsed "Tender for Land at Milend," and addressed to the Clerk of the Board, at the Office of the Metropolitan Board of Works, Spring-gardens, S.W. on or before TWELVE o'clock at noon, on WEDNESDAY, the 13th day of MAY now next, and no TENDER will be received after that hour. The Board do not bind themselves to accept the highest or any Tender.

JOHN POLLARD, Clerk of the Board.

Spring-gardens Charing cross, March 28, 1863.

ST. MARYLEBONE, MARCH 26th, 1863. TO SCAVENGERS, CARTERS, &c.—CONTRACTS for HORSES and SLOP-CARTS.—The Vestry of the Parish of St. Marylebone, in the county of Middlesex, hereby give notice, that they will meet in the Board-room of the Court house of the said parish, on THURSDAY, the 9th of APRIL, 1863, at ELEVEN o'clock in the forenoon, to receive TENDERS from persons willing to CONTRACT for CARTING AWAY the SLOP and SWEEPING from the streets of the said parish. The contractor finding and providing horses, carts, drivers, fillers, and slop-shed, and all other matters that may be requisite except sweepers, or to CONTRACT for the SUPPLY of HORSES and DRIVERS only to the PARISH SLOP-CARTS at per day; and also for the SUPPLY of SLOP-CARTS with HORSES and DRIVERS at per day, the vestry finding their own gear. The term of each tract to be one year from the said 9th day of APRIL, 1863. The parish is divided into districts for the purpose of cleansing particulars of which, and also the form of obligation, together with form of Tender, may be had of the Vestry's Surveyor, Mr. ROBERT SHACE, at his daily attendance at the Court house, or from TWELVE TO ONE o'clock. All Tenders for the whole or any district of the parish to be upon the printed forms only, and to be delivered to the Vestry Clerk, sealed, before ELEVEN o'clock in the forenoon of the said 9th day of APRIL, 1863. No Tender will be received after that hour, nor will any Tender be received unless it contains inclosed a 10l. Bank of England note as an evidence that the same is made bonâ fide, which will be returned to each person whose Tender is not accepted, but will be retained in the other case until the contract is duly signed, such 10l. to be forfeited to the Vestry if the Tender is not carried out, whether from mistake or otherwise. Satisfactory security will be required for the performance of the contract, and the contractor to pay six guineas as the expense of the bond and contract. The Vestry will require the parties tendering, or some persons on their behalf, to be in attendance at the time of opening the Tenders. The Vestry do not jedge themselves to accept any Tender, or any of the Tenders.—By order,

W. R. GREENWELL, Vestry Clerk.

Court-house, St. Marylebone, March 26, 1863.

TO BUILDERS.—TENDERS are required for the ERECTION of TWELVE HOUSES, in Devonshire and Stanley Roads, Hackney, for the Temperance Permanent Land and Building Society. The plans may be inspected, and a copy of the specification (for 5s.) obtained at the Offices of the Society, between the hours of TEN and FOUR o'clock, on and after APRIL 7th, up to APRIL 21st. Tenders, in the forms attached to the specifications, are to be left with or sent to the Secretary, sealed, and marked "Tenders for Houses at Hackney," at or before FOUR o'clock on TUESDAY, APRIL 21st. References and security may be required, and the lowest or any Tender will not necessarily be accepted.

HENRY J. PHILLIPS, Secretary.

Offices, 34, Moorgate-street, London.

TO BUILDERS, &c.—Notice is hereby given, that plans and specifications for BUILDING NEW SCHOOLS, at Little Heath, Aldborough Hatch, and a PARSONAGE HOUSE at Aldborough Hatch, near Ilford, in the county of Essex, will be lying at 5, South Park, Ilford, E. on MONDAY, the 13th of APRIL, and five following days, and all persons desirous of CONTRACTING for the Works must send in sealed Tenders, addressed to the Rev. ERSKINE KNOLLYS, Ilford, E. on or before APRIL 25th. The Contractors must be prepared to enter into the usual legal bond, with two good and approved sureties, for the due fulfilment of their Contract. Neither the lowest nor any Tender will necessarily be received

TO BUILDERS.—TENDERS are required for the ERECTION of a small CHAPEL at Belvedere, Erith, Kent. Drawings and specification may be seen, and all particulars obtained, at the Office of the Architects, WILLIAM & HABERSHON & PITE, 38, Bloomsbury square, W.C. The lowest or any Tender will not necessarily be accepted.

TO BUILDERS.—Builders willing to CONTRACT for the erection of a HOUSE and STABLING, in the Bow-road, E. may inspect the Drawings and specifications at the offices of Messrs. HAMMACK & LAMBERT, 29, Bishopsgate street, City. The contractor will be required to provide two sureties for the due performance of the works, and to pay the expenses of the Bond and Contract. TENDERS to be delivered on THURSDAY, the 9th instant. The Architects do not bind themselves to accept the lowest or any Tender,

TO BUILDERS. — Cornwall. — Penryn, Kegillack.—Builders desirous of sending in TENDERS for the ERECTION of a FARM-HOUSE and HOMESTEAD at Higher Kegillack, about two miles from Falmouth, the property of the Ecclesiastical Commissioners for England, can inspect the drawings and specification on application to Mr. PETTYGUTTE, the Tenant, at Higher Kegillack, or to Mr. ROWE, Truroseral, Penryn, on and after THURSDAY, APRIL 2nd. Tenders to be sent in under cover to Messrs. CLUTTON, Westhall-place, Westminster, S.W. on or before MONDAY, the 20th day of APRIL. The Commissioners will not bind themselves to accept the lowest, or any Tender

TO CONTRACTORS.—ROAD MAKING. TENDERS are required to be furnished for the CONSTRUCTION of a ROAD in the Town of Teddington, in the County of Middlesex. Total length, about 17 chains, more or less. Plans, sections, and specification of the required road can be seen on application to WILLIAM ALLAM, Manor House, Teddington, to whom sealed Tenders must be addressed, on or before the 11th day of April, 1863.

London, 4th April, 1863

TO CHURCH CLOCK MANUFACTURERS.—TENDERS.—The Rotherhithe Christ Church Committee invite TENDERS for a CHURCH CLOCK of the best description, with all the latest improvements. The Tenders, accompanied with a full descriptive specification, to be delivered not later than the 17th of APRIL, 1863, to Mr. SPURGEON, Churchwarden, 75, Paradise street, Rotherhithe, S.E. of whom the particulars can be obtained. The Committee do not bind themselves to accept the lowest or any Tender

BIDEFORD BRIDGE. — NOTICE to CONTRACTORS. The Committee of the Bridge Feoffees and Town Council for the long Bridge at Bideford, North Devon, hereby give Notice that TENDERS will be received for the WIDENING of the said BRIDGE, the plans, sections, and specifications for which can be referred to at the Office of THOS. PAGE, Esq. Civil Engineer, 3, Royal terrace, Adelphi, London, from the 2nd of APRIL to the 11th, both inclusive. The principal parts of the work will be in cast and wrought iron. Tenders to be delivered at Mr. PAGE'S Office, on or before the 21st of APRIL; but the Committee do not pledge themselves to accept the lowest or any Tender.

WRITTLE GAS COMPANY, LIMITED. The Directors of the Writtle Gas Company, Limited, invite TENDERS for the ERECTION of new GAS WORKS, at Writtle, in the county of Essex. Plan and specifications of the same may be seen on application to the Secretary, at the Office of Mr. JAREZ CHURCH, Civil Engineer, Chelmsford. The work is divided into two contracts. No. 1 contract comprises the builder's work, and No. 2 contract the ironwork, apparatus, and mains. Sealed Tenders for the respective contracts are to be addressed to the Secretary, and delivered at the Company's Offices on or before the 24th day of APRIL, 1863.

F. A. JONES, Secretary.

Writtle Gas Company's Office, High-street, Chelmsford, March 26, 1863.

TO BUILDERS.—TENDERS will be received for ERECTING ELEVEN SIX-ROOMED HOUSES, in rear of High street, Southwark. Cash advances made, but security required for fulfilment of contract.—Apply at Estate Office, 21, Walbrook.

TO ORGAN BUILDERS.—RESTORATION of SAINT ANDREW'S HALL, NORWICH.—The TOWN COUNCIL of the City of Norwich are prepared to receive TENDERS for removing the Organ from the present Western Gallery, and re-instating the same in the Orchestra at the East end of the Hall. Tenders endorsed "Restoration of Saint Andrew's Hall—Removal of Organ," to be sent to my Office, Guildhall, not later than ELEVEN o'clock in the forenoon of THURSDAY, the 9th of APRIL, next.—By order,

W. L. MENDHAM, Town Clerk.

Guildhall, Norwich, 26th March, 1863.

TO BUILDERS AND CONTRACTORS

TENDERS are required for BUILDING and COMPLETING the necessary WORKS for a LAUNDRY COMPANY, situate between Cambridge road, Upper Norwood, Surrey. Plans and Quantities may be seen at the Cambridge Hotel, Upper Norwood, Surrey, between the hours of TEN a.m. and FOUR p.m. on Tuesdays, endorsed "Tenders for Building for Laundry," must be delivered addressed to the Chairman of the Crystal Palace District and Croydon Railway Company, the Cambridge Hotel, Upper Norwood, Surrey, on or before the 13th of APRIL, 1863. The Company do not bind themselves to accept the lowest Tender.

CITY of LONDON.—TENDERS for LEASE.—Parties desirous to TAKE on LEASE the Premises No. 22, Lawrence-lane, Cheapside, from the Master and Fellows of Trinity College, Cambridge must make their application on or before the 21st instant. The Corporation will not bind themselves to accept the highest or any Tender. Forms of Tender may be obtained at Mr. MARSH'S Office, 2, Charlotte Row, Mansion House

Dated April 1st, 1863

TO BUILDERS, CONTRACTORS, and OTHERS.—Parties desirous of TENDERING for the ERECTION of a DETACHED VILLA RESIDENCE (the first of a pair intended to be erected) on the British Land Company's Estate at East Cowes, Isle of Wight, may inspect the plans and Specifications at the Office of the Surveyor for the British Land Company, 14, Moorgate-street, E.C. or at the House of Mr. James Moore, High street, West Cowes; and may obtain lithographed copies of Bills of Quantities on payment of 7s. at either of the above places from MONDAY, 6th inst. to SATURDAY, 11th inst. Tenders may be sent, not later than TUESDAY, 14th inst. addressed to the Secretary of the British Land Company, 14, Moorgate-street, London, E.C. endorsed "Tender for Villa Residence at East Cowes." The unsuccessful competitors may receive back the money paid for the Bills of Quantities on returning the same any day after Notice has been given in "The Builder" that a Tender has been accepted.

TO CONTRACTORS and OTHERS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for the CONSTRUCTION of the following SEWERS, in the parish of Clapham, viz.:—About 4,620 feet of 3 feet 9 inches by 2 feet 6 inches Brick Sewer, 3,135 feet of 3 feet by 2 feet Brick Sewer, and 1,370 feet of 2 feet 3 inches Brick Barrel Sewer; and also for the EXCAVATING the said, and LAYING of, about 9,150 feet run of STONEWARE PIPE SEWERS, of various sizes (the pipes for which will be supplied by the Board. The specification, plans, and sections, may be seen, and all further information obtained, at the Office of Mr. JOHNSON, Surveyor, Manor Cottage, Larkhall lane, Clapham, between the hours of NINE and FOUR. Tenders are to be sent in under seal to the Board as below, on or before TUESDAY, the 21st APRIL next, and are to be endorsed "Tender for Sewers." Persons tendering must be in attendance at the Offices of the Board, on WEDNESDAY, the 22nd APRIL, at FOUR o'clock p.m. when the Tenders will be opened. Security will be required for the due performance of the contract. The Board do not pledge themselves to accept any Tender.—By order of the Board of Works for the Wandsworth District,

ARTHUR ALEX. CORSELLIS, Clerk to the Board.

Battersea-rise, Wandsworth, S.W. March 23, 1863.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION Incorporated by Act of Parliament, 1850, 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or commutation for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

OATES'S PATENT SOLID BRICK MACHINE. Persons who may be contemplating MAKING BRICKS by MACHINERY are requested to see the above Machines in operation before purchasing others. These Machines are warranted to make thirty perfect bricks per minute, stiff enough to be wheeled (as soon as made) to the kilns to be burnt, and from the time the clay is dug from the mine until the bricks are made and set in the kilns for burning, does not exceed five minutes.—Application to be made either to J. P. OATES, Bellington, near Birmingham; or to OATES & BAYLIS, Stourbridge, from whom drawings and every information may be had, with card to view.

BRICKS.—About 70,000 good sound RED BRICKS FOR SALE, lying at Cole green Station on the Hertford Branch of the Great Northern Railway.—Apply to J. B. HOWARD, on the spot.

VALUABLE PATENT RIGHTS FOR SALE.

BUNNETT'S SELF-SUPPORTING HOLLOW BRICK FIRE-PROOF FLOORS, ROOFS, &c. They are safer, lighter, an cheaper than any others, and have been successfully introduced in London and different parts of the kingdom, and most satisfactory testimonials received from eminent architects. Also,

BUNNETT'S CRITERION PATENT CONTINUOUS FEED BRICK, TILE, AND SANITARY PIPE MACHINE FOR STEAM OR HORSE POWER.

Which will produce, of superior quality, one-third more in quantity than any other machine of the same cost and working expenses. The above Patents will be sold together or separate, and are suited for private enterprise or a public company.

For prospectuses and particulars apply to Mr. J. BUNNETT, Engineer, Deptford, Kent.

BRICK and TILE MACHINES, which have obtained ten Prizes from the Royal Agricultural Society of England; the Prize Medal at the Great Exhibition in London, in 1851; Paris, 1855 and 1856; also, Royal Agricultural Society of North Germany, 1858; and Universal Exhibition of Rotterdam, 1858; and obtained two Medals at the International Exhibition last year;—may be had from the Manufacturer, JOHN WHITEHEAD, Preston, Lancashire.

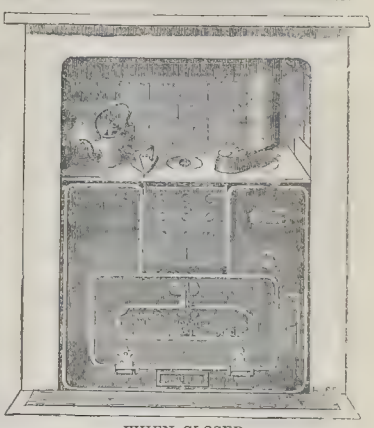
And every description of Ironwork, wrought or cast, for Builders & other purposes, estimated for and executed. Designs furnished.



TO BUILDERS and OTHERS.—TO BE SOLD, an IRON GEOMETRICAL STAIRCASE, consisting of fifty-one steps, with four landings.—Apply by letter (post-paid) to FREDERIC H. JEWITT, Esq. Solicitor, 61, Coleman-street, City E.C.

CUNDY'S MULTUM IN PARVO ECONOMIC POOR MAN'S KITCHENER.

WHEN OPEN.

These drawings represent a Stove of the following dimensions:—24 inches long, 24 inches high, and 15 inches deep, when used as an open fire-stove, and also when closed, for BAKING, BOILING, and IRONING. The oven, which is placed underneath the fire, is 18 inches long, 14 inches deep, and 11 inches high. The flue passes all round the Oven, and the Boiler will contain six gallons of water. This Stove, which is also made 30 inches long, 26 inches high, and 15 inches deep, is admirably adapted for BACK KITCHENS, as an auxiliary Cooking Stove, and for STILL-ROOMS, NURSERIES, and SMALL HOUSES, the consumption of coal being only 112 lbs. per week. This Stove, also Cundy's Patent BRICK OVEN Double Fall-down Bar KITCHEN RANGE; also Cundy's Warm-Air Ventilating Stove, suitable for CHURCHES, HALLS, STAIRCASES, and SCHOOLS, for which invention Mr. Cundy received the SOCIETY OF ARTS MEDAL, also a Medal from the Royal Commissioners of the GREAT EXHIBITION of 1851, can be seen in operation daily, at the Show-rooms of

WHEN CLOSED.

JAMES BARTON,
Iron Works, 370, Oxford-street, W.
N.B. Manufactory for the Patent Stable Fittings and Enamelled Mangers.

FIRE-PROOF CONSTRUCTION.—FOX & BARRETT'S PATENT.
This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the Patent,

MANAGER, MR. WOODCOCK.

Churches, Greenhouses, Offices, and Buildings of every description warmed by means of a modification of the plans successfully used during the last five years by Mr. Goldsworthy Gurney in both Houses of Parliament.

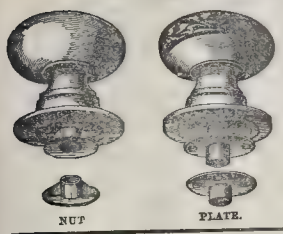
Steam, Hot Water, Gas, and in open or enclosed fire-places, Coal and Coke, are equally available for the process.

The cost is less and the effect greater than that of any other known Plans.

The Horticulturalist will find herein an instrument of new and important powers.

The Apparatus may be seen in operation in ST. PAUL'S CATHEDRAL, the various offices of the "Department of Science and Art," and at the Architectural Societies' House, 9, Conduit street, Regent-street

Particulars and testimonials forwarded on application.



SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

BOND & SCAMMELL (late Thomas Pugh & Co.)

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

NUT PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in public and private buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both rim and mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich designs in glass, china, brass, bronzed, gilt, carved woods, inlaid, &c. &c. or to any design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of locks, latches, brass foundry, and ironmongery, required for buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and particulars sent upon application.

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.
ESTABLISHED 1774

The bath and boiler may be fixed in the same or separate rooms, anywhere below the level of cold-water cistern. Open or close fire at pleasure. No brickwork setting for boiler required.
Estimates given from architects' drawings, or by inspection of buildings.
Catalogues, containing Nine Illustrations of different methods of heating baths, sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

BY HER MAJESTY'S ROYAL LETTERS PATENT.

WEBSTER'S SLATE DRILL BORING MACHINE.
The Patentee, in introducing this Machine to the notice of Contractors, Slate Merchants, Slaters and House Proprietors, has every confidence in recommending it as being an immense improvement upon the old-fashioned, slow and expensive mode of Boring or Punching House slates. Though admirably adapted for its purpose, this Machine is yet so simple that a boy may work it; it is so cheap that no tradesman need be without one, and so economical that, by its saving in breakage alone, its cost will be repaid in a few weeks.
The advantages and capabilities of the Machine may be stated as follows:—
1st. It will bore with ease the hardest slate.
2nd. The holes are drilled at once with sufficient countersink for the heads of the nails.
3rd. It economizes time, reduces labour, and saves expense, as one man by the Machine can accomplish the work of four by the knife or pick.
4th. There is no breakage.
5th. The full strength of the slate is preserved; the drill not causing any splinter as is done by the pick
From among the numerous testimonials which the Patentee has received from practical men as to its efficiency, the following selection may be considered sufficient:—
From Mr. John Mitchell, Slater, Arbroath.
"Panmure street, Arbroath, 1st July, 1862.
Dear Sir,—I have much pleasure in bearing testimony to the great usefulness of your Slate Boring Machine, which I have had working in my establishment for some time. It will bore any kind of Slate, and the work done by it is really perfect; the holes are struck or drilled instantly, and at same time are nicely countersunk for the nail heads. The economy in manual labour is considerable. By the Machine one man can accomplish the work of at least four men by the old mode, while what was formerly lost by breakage is entirely saved
I have no doubt that when your invention becomes known that it will be universally adopted.—I am, dear Sir, yours very truly,
JOHN MITCHELL, Slater.

Mr. Alexander Webster, Engineer, &c.
Lindsey-street, Arbroath."
From James Henderson, Esq. Slate Merchant, Aberdeen.
"24, Belmont-street, Aberdeen 6th Jan 1863.
Dear Sir. I have had your Patent Double Boring Machine in operation for a considerable time in my slate-yard, and find that it pierces the hardest kind of slate with ease, and produces a hole quite regular, and having just sufficient countersink to receive the head of the nail.
The slaters in this quarter are much pleased with the work done by the Machine, and they find a considerable saving by using it.—Yours, &c. (Signed) JAMES HENDERSON."
From Mr. James Gray, Slater, Keith, Aberdeenshire
"Dear Sir,—In reply to your note of inquiry as to how Webster's Patent Slate boring Machine pleases me, I have to state that it gives perfect satisfaction; doing the work much better, and in one-third of the time formerly required with the pick. I can confidently say that I have saved the price of the machine in time and breakage during the last six months. I can heartily recommend it to my brethren in the trade, as it will prove of very great advantage to them, and to slate merchants who sell slates drilled and ready for use.
You are at liberty to use this letter in any way you think proper
Yours, &c. (Signed) JAS. GRAY.
Huntly, 15th February, 1863."
From Mr. George Davidson, Slater, Aberdeen.
"65, Chapel street, Aberdeen, 8th January, 1863.
Dear Sir,—I beg to say I have now had a fair trial of your Slate-boring Machine, and I can certify that the work done by it is far superior to that done by the hand. As regards slates to be used on laths, I have not seen anything to equal it for quality and quantity of work. There is also a large saving of breakage.—Yours, &c.
(Signed) GEORGE DAVIDSON."
From Messrs. Legg & Gray, Slaters, Peterhead
"Peterhead, 12th January, 1863.
Dear Sir,—We beg to state that Webster's Slate Machine is all that we could desire. We have no hesitation in saying that its place will be saved entirely on two small cargoes of slates, as a boy can do the same work as the best man that we employ. Yours, &c.
(Signed) LEGG & GRAY."
DISTRICT AGENTS are being appointed for England, the Wales, and also Ireland. Suitable parties will learn prices and terms by apply ing to the Patentee, ALEXANDER WEBSTER, Engineer, Arbroath, N.B.; or to his Agent, Mr. D. F. ORMOND, Ironmonger, Arbroath. Satisfactory references will be required.
** Any one infringing on this Patent will be rigorously prosecuted

IRON ROOFING of CORRUGATED IRON, Wrought Iron, principal Roofs covered with Slates, Iron Bridges, Girders, and Railings; also Portable Buildings for Dwellings, Farm Purposes, Churches, Chapels, Schools, Theatres, Concert or Dancing Rooms, &c. suitable to all Climates, fixed complete in town or country, or packed for exportation.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

Terms:—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter, Five Evenings per Week, from 7 to 10. There are no extras. The Terms include the whole of the above, with the use of Drawings, Boards, Squares, &c. For Prospectuses of the [illegible] apply at the Establishment, 24, Guilford-st. Russell-sq.

The Builder.

VOL. XXI.—No. 1052.

Designs for the National Albert Memorial.

It is unnecessary to remind our readers of the past proceedings in respect of the national monument to Albert the Good;—how that a committee was appointed by a public meeting at the Mansion House to obtain funds and erect a fitting evidence of the nation's regard; how that committee, having raised funds, instead of obtaining a design and forwarding it, as directed by the meeting, to the Queen for approval, unwisely, as we have always thought, threw upon her Majesty the provision of the design; from which day the character of the movement was to a certain extent changed; how that the committee named by the Queen called in a certain number of architects to advise, and ultimately arranged with seven of them to prepare designs for a memorial. All this, with certain intermediate endeavours in respect of a suggested obelisk, is known to all, as it is also that the designs so prepared have been inspected at Windsor, and are now in the Palace of Westminster. The proposition, we should say, was, as will be remembered, to erect on the north side of the Horticultural Gardens, and between those gardens and the Kensington-road, a splendid Hall, to be devoted to meetings intended to promote the interests of Art and Science. On the other side of the Kensington-road the Hall was to be confronted by the memorial proper, the ground around being laid out ornamentally in terraces. Last Saturday the *Times* announced that this plan was about to be abandoned. Our great contemporary said:—

"The architectural and artistic advisers of her Majesty have adopted another, and, as it seems to us, a far better idea. The old plan is abandoned as a whole, and in each of its parts. The scheme of a double monument, one half on the one side of the Kensington-road, and the other half on the other side, exists no longer. The group of statuary is abandoned without remorse; and, instead of the two, a single monument is to be erected. We know not whether it is to be placed on the northern or southern side of the Kensington-road; but we believe we can speak with some confidence as to the style and nature of the structure. It is to be what is called an Eleanor Cross, something similar to the Martyrs' Memorial at Oxford, or the monument erected to Sir Walter Scott, at Edinburgh. The effect of the latter monument is much injured by its unfortunate position, about to slip, as it should seem, down the side of a steep hill, and much out of keeping with the very striking and romantic scenery by which it is surrounded. Still, no one can deny to it elegance of design, and much architectural beauty. The Eleanor Cross which it is proposed to erect to the memory of Prince Albert is to be a building of much greater size and of imposing height. It is said that it is intended to give it an elevation of nearly 300 feet, so that it will be a very conspicuous feature in any distant view of the metropolis. In the lower part is to be placed, properly secured from the effects of our moist climate and smoky atmosphere, a statue of the Prince. The whole structure is to be intrusted to Mr. Gilbert Scott, so that we doubt not that full justice will be done to the utmost demands of Gothic architecture."

In making this announcement the *Times* was, at any rate, somewhat premature. It is more than probable that the arrangement will be as stated; but we have authority for saying that at that time the report of the committee had not been sent to the Queen; so that the matter certainly was not settled, even if it be quite so now.

The series of drawings submitted by Mr. Scott are magnificent in execution; and, as pictures, far surpass all the rest. They show, too, as a matter of course, great talent and taste. We are disposed to think the height must be overstated. We do not hear that any drawing showing the cross to have an elevation of 300 feet was sent in. At the angles of two terraces around the base of it, groups of sculpture are introduced. He has four or five designs for the Hall of Science and Art (only one for the memorial), very fanciful and in their style very beautiful.

We do not propose here to criticise the design recommended (we do not know enough of it to be able to do so), nor to comment at this moment on the propriety of adopting the style of the fourteenth century for the monument. We cannot, however, resist asking whether it is exactly what all wish who are striving for the honour of nineteenth century advance, that wanting an Albert Memorial we should be forced to take an "Eleanor Cross." There is surely something humiliating in the admission.

A few words as to some of the other designs, and without any intention of instituting comparisons.

When the intention to erect a memorial was first mooted, at the commencement of last year, we said,—"For our own part, we desiderate a grand union of the arts in honour of one who knew and loved them all. We see in the mind's eye a magnificent Temple enshrining a noble statue of the Honoured One. Upon and around the pedestal are groups and *relievi* illustrating his character; while other *relievi* and paintings, in the entablature and elsewhere, set forth the incidents of his life. The worker in metal, the glass painter, the mosaicist, have co-operated with the architect and sculptor: marbles of all sorts join with the richest materials of their several kinds and the cunningest art; and we have at once a fitting monument for the Hero of the family-life, and an evidence of the position to which the arts have attained amongst us."*

Most of the designers have followed out this idea.

Mr. Charles Barry submitted two designs; one of them for a highly-decorative building, to contain a sculptural group, in white marble, in which the statue of the Prince would, of course, be chiefly conspicuous; the other for an equestrian statue without a building. He advocates, however, the former kind of memorial, for many reasons; among the chief of which are these;—That the feeling with which the nation (no less than the Queen) regards the Prince we have lost is one of profound and affectionate regard, respect, and sorrow; and that therefore any memorial to be satisfactory to the national feelings in these respects should comprise a *portrait* statue, whereby his familiar presence shall be perpetuated to all the present generation of men, while the attributes with which that statue is surrounded shall evidence, not only to us, but to all future times, the many ways in which the Prince's daily efforts were directed to all those acts and processes whereby mankind were to be made socially and materially happy, self-reliant, peaceable, and Christian. That any such portrait statue cannot be had satisfactorily, in point of art, except in such a material as white marble, and would be unattainable in metal, whether dark as bronze or lustrous as gold. That consequently the *portrait* statue, with its attendant illustrative adjuncts, must in this country be *in a building*, and not be exposed wholly or partially (as, for instance, under a colonnade or loggia) to the influence of our climate, especially in London. Moreover, that quiet and instructive contemplation of any such statue and accessories can only be *in a building*, where the spectator is at ease and protected from disturbing influences. Lastly, that in a building there are numberless opportunities in the ceiling and wall spaces for additional illustrations of the Prince's life and labours, for the development of high art and decorative art, by means of paintings in oil and fresco, by bas-reliefs, mosaics, and otherwise.

* Vol. XX., p. 75.

The style and character of the building which he proposes is, externally, unique in this country; which he considers a point of great importance, in that it shall not be liable to be mistaken for, or confounded with, any building in common use. He has therefore chosen that period of North Italian Renaissance which is exemplified in the Certosa at Pavia and Giotto's architectural works in Florence. The building is in plan a Greek cross, with semicircular vaulted roofs, and with a cupola at the intersection of the arms of the cross. The material externally of stone and inlaid marble, with niches for marble statues, panels for marble or metal bas-reliefs, spaces for mosaics, in which last material the archivolts, friezes, and other like spaces have dedicatory inscriptions—the roofs of metal, gilt. This building occupies the centre of the site appropriated for the memorial by the Royal Commissioners, with the approval of Her Majesty. It is flanked by two imposing fountains, and the whole plateau is levelled and raised above the level of the high road some 10 feet, and is approached therefrom by broad simple flights of steps.

Internally, the walls and ceilings are occupied and decorated as above named; the prevailing effect being that of simple gold and full rich colouring, which is intended to give full effect to the memorial group, itself of pure white marble. This group is of very large size, from the number of figures it comprises. Immediately surrounding the statue of the Prince, but on a lower level, are emblematical figures of Religion, Truth, Purity, and Constancy; while on a still lower level are figures representing Architecture, Sculpture, Painting, Music, Manufactures, &c., expressive of the objects of usefulness which the Prince had so much at heart.

The alternative design is a figure of the Prince on horseback, on a pedestal of marble and stone, for the sake of variety in colour; the pedestal having niches and projections from it, to be occupied, as in the former design, by emblematical figures of the Christian virtues, and of the above different branches of art and science. The equestrian statue is proposed to be in different metals; the horse being in bronze, while the figure of the Prince himself is proposed of the new metal aluminium, for the reason that its light grey tint and dead unburnished surface would, Mr. Barry thinks, be more fitting and effective than either bronze or gold for a *portrait* and for the display of the highest sculptural art. The statue is necessarily colossal. The accessories as fountains, terraces, and steps, are the same in each design.

His design for the Hall seems founded on that of the Chapel at Versailles.

Mr. M. D. Wyatt sent in three designs for the memorial proper; an open four-porticoed Classic temple for the statue of the Prince, with other statues around under flat canopies, with steps, rich adornments, and water; a "cross," so to speak, Italian Gothic in style, highly decorated; and thirdly, a separate sculptural group, consisting of a figure of the Prince, seated, with a standing figure of Fame crowning him, on a richly carved pedestal of a sarcophagus outline. For the Hall, a large circular building, he also sends alternative designs, Italian and Gothic, the latter suggesting that he had Pisa in his recollection when he drew it. The drawings are effective and admirable.

Mr. Hardwick contents himself with a design for a group of sculpture and pedestal.

Professor Donaldson submitted a shrine with hemicycle for the statue. Statues and elegant arrangements prevail around. To the Hall, an apartment 150 feet by 80 feet, the Professor, true to his traditions, has an octastyle Corinthian portico, completed with sculpture. The interior of the Hall, very elaborately decorated, is set forth in a fine pencil drawing.

The matter will doubtless come more formally before us in a short time.

KNIGHTHOOD.

The celebration of the marriage of the heir to the throne with all the heraldic magnificence —with *fanfare* of silver clarions, with processions of yeomen of the guard in their scarlet doublets barred with gold, gentlemen-at-arms with their white plumes, state drummers and trumpeters in coats of cloth of gold, heralds in their tabards, and pursuivants, kings-at-arms, and garter king-at-arms with collar, badge, tabard, and scarlet satin mantle—has awakened a national interest in all the insignia of chivalry which has long reposed in the minds of a few antiquaries. All England has just seized heraldry as a voice with which to speak welcome to the beautiful daughter of sea-kings whom the Prince of Wales has chosen for his bride. Seldom have quarterings been so assiduously studied; never have the heraldic emblems of a foreign nation been so multitudinously displayed in our streets, as in the decorations of our houses, bridges, and public buildings, not only along the line of route through which the procession was expected to pass, but in every town in the United Kingdom—north, south, east, and west. Heraldic Latin and heraldic colouring have been diligently searched to find full and faultless expression of the public gratification. England has been one broad-spanned rainbow—one vast pageant. Much of the magnificence attained was due to the insignia of the different orders of knighthood, both in the civic decorations on the route of the entry of the Princess into London and in the ceremony of the marriage in St. George's Chapel, Windsor. We may follow up the interest thus awakened by an enumeration of the different orders of knighthood of European fame.

The word knight is derived from the Saxon *cnight*. It originally signified a soldier or horseman of war; but, in the Middle Ages, referred to a vassal that held his lands by serving his lord on horseback. In modern times it has become a title of distinction conferred upon persons whom the sovereign deems it fit to honour. There have been upwards of fifty orders of knighthood established in Europe. Of these the oldest in the world is that of the Round Table,—the almost mythical companions of which are best known as King Arthur's Knights.

It is scarcely needful to say that the order most in esteem is that of the Garter. The knights of this order, in their robes, collars, and stars, and blue garters decked with gold, pearls, and precious stones, formed the brilliant background of the marriage ceremonial in the Chapel at Windsor. They are personages of great rank, having for a sovereign guardian her Majesty the Queen. The Prince of Wales is a knight of this order. It will be remembered that over a general's uniform he wore the gorgeous robes of a knight of the garter at the celebration of his marriage. The husband of the Princess Royal and the brother of the late Prince Consort are both knights of this order. It is said to have been founded by Edward III., as every one has heard, after picking up the garter of the beautiful Countess of Salisbury, with whom he had been dancing; in confirmation of a remark he made to the smiling lords present, that he would make that garter of world-wide reputation. This most chivalrous society is a college or corporation, having a common seal belonging to it, and consisting of twenty-five companions, who are noblemen of the realm or princes of foreign countries, besides the sovereign. There are also attached to the order twenty-six poor knights, who are supposed to have no other means than an allowance given them. They are called the Poor Knights of Windsor, because the seat of this order is Windsor Castle, and the consistory of the order is St. George's Chapel. The officers belonging to the order are the prelate of the garter, the chancellor of the garter, the register (who is always Dean of Windsor), the principal king at arms, and the usher of the garter.

The order of the Knights of the Temple, though now extinct, was once too powerful to be placed lower in the list. It is uncertain whether this order was founded by Pope Gelatius or by Baldwin II., king of Jerusalem, circa A.D. 1117. These monkish knights at first dwelt in part of the building that belonged to the Temple of Jerusalem, not far from our Saviour's sepulchre, where they charitably entertained Christian strangers and pilgrims, and, clad in armour, led them through the Holy Land to view the different points of interest connected with the mission of the Messiah. Growing too rich, too powerful, and less religious in their lives, their order was abolished by Pope Clement V. in 1309; and their possessions divided among the knights of St. John of Jerusalem and other religious orders.

The order of St. John of Jerusalem had its first foundation and abode in the Holy City. Thence the knights removed their residence to the Isle of Rhodes; but, being dispossessed of this by the Turks in 1523, the Emperor Charles V. allowed them to make Malta their chief seat, on condition that they would send him a falcon every year as an acknowledgment. The property of this order was also very large; but it was not forfeited till the reign of Henry VIII. Up to this period the prior of the knights of this order in England and Scotland had a right to a seat in the House of Lords.

The Knights of the Holy Sepulchre were a very ancient body, instituted by Helena, the mother of Constantine the Great, who, at the age of eighty, journeyed to Palestine, and assisted in the finding of the holy cross.

Knights of the Bath were formerly a religious order. They were obliged to bathe themselves on the eve preceding their creation, and observe several other religious rites.

The order of the Rue, or of St. Andrew, is of well-known Scottish origin.

James I. instituted the order of Nova Scotia in the West Indies, the knights of which were to wear a ribbon of an orange-tawny colour. And the same monarch divided the hitherto combination of title, knight-baronet. A "plantation" was in formation at Ulster, and the persons making disbursements in furtherance of this object were advanced to the distinct dignity of baronet,—a rank that was henceforward to take precedence in all writings, sessions, and salutations of ordinary knights, knights bannerets, and knights bachelors.

A knight-banneret (from the Dutch *bannether*) is a knight made on the battle-field, under the standard. In several centuries successive sovereigns marked their approbation of individual valour on the field of battle by the ceremony of cutting off the point of the standard of the person they wished to honour, thus making it a banner, and the person so distinguished a knight-banneret.

Knights bachelors are of the lowest order of knighthood, yet of very ancient origin. The foundation of the order is traced back to a custom of the Germans, who, as soon as the State considered a young man fit to manage arms, furnished him with a shield and javelin before a large assembly or full council. In less remote ages part of the ceremony of investing a young man with the girdle of knighthood consisted in his solemnly entering a church, and placing the sword, which had been presented to him with the girdle, on the altar, and vowing his services to the glory of God. Eventually it became customary to receive the honour of knighthood, not in public assembly, but at the hands of a prince; kings sending their sons to neighbouring princes to be thus distinguished. To the sword and girdle of this period the development of chivalry added gilt spurs. Henry III. made an order called the Knights of Christian Charity, for the benefit of poor captains and maimed soldiers.

The terms carpet-knight, and knight of the chamber, used sometimes in a depreciatory sense, signify a knight created in times of peace by the sovereign in a carpeted palace, in distinction from a knight who has won his spurs upon the blood-stained battle-field.

Of foreign orders we must make first mention of the Danish knights of the Elephant, reminding our readers that the Danish castellated elephants and ravens, surmounting the Venetian masts on London Bridge, formed an especial decoration of significance on the route of the Royal procession.

The French have numerous orders of knighthood:—

The knights of Saint-Esprit, or Holy Ghost, created by the French king Henry III., at his return from Poland, who was born and crowned king on Whit Sunday.

The knights of the order of the Virgin Mary in Mount Carmel were appointed by Henry IV., in 1607, consisting of 100 French gentlemen.

The Knights of St. Michael the Archangel, whose order was established by Louis XI. in 1469, to consist of thirty-six knights, of whom the sovereign was to be chief.

The Knights of St. Magdalen appointed by St. Louis to prevent duels.

The Order of the Thistle, a Bourbon order of knighthood. Motto: *Nemo me impune lacessit*, i.e., None that provokes me goes away unpunished.

The Order of the Porcupine, whose motto was *Cominus* and *Eminus*, till Louis XII. crowned the Porcupine with another, *Ultus avos Trojæ*.

The Order of the Lily in Navarre.

The Order of the Crescent, created by René, Duke of Anjou, A.D. 1462, when he conquered Sicily. Motto: *Los*.

The Order of the Jar, made by Don Garcia, king of Navarre, in remembrance of a vision he saw in a cave, when out hunting, of a pitcher of lilies on an altar before an image of the Virgin.

The Order of the Golden Shield, founded by Louis II. Motto: *Allons*.

The most ancient Order of the Genette, or Horse-bit, founded by Charles Martel after the defeat of the Saracens in the great battle of Tours, A.D. 783.

The Knights de l'Epi, or ear of corn, or of the Ermine, established by Francis I.

The Knights de l'Etoile, or of the Star. Motto: *Monstrant Regibus astra viam*, The stars show a way to kings.

Spain has instituted several orders of knighthood:—

The sovereign of Spain is chief of the Order of the Golden Fleece appointed by Philip, Duke of Burgundy, upon his marriage with Isabel of Portugal. Motto: *Ante ferit quam flamma micet*.

Alonzo VIII., A.D. 1118, founded the Order of San Salvador in Arragon.

The Knights of St. Maria de Mercede are a Spanish order, as are those of Montesia.

The Knights of the Pear-tree, created A.D. 1179, were subsequently known as Knights of Alcantra in Leon.

The Portuguese own the startling Order of the Knights of Jesus Christ.

Poland can boast two orders,—that of the White Eagle, founded by Ladislaus V., A.D. 1325; and that of the Militia Christiana.

Venice owns two orders,—that of St. Mark and that of La Calza, or the Stocking.

Sweden possesses an order entitled the Knights of the Sword and Baudrick.

The Duke of Savoy was confirmed Grand Master of the Order of St. Maurice and Lazaro by the Pope, A.D. 1119.

Cosmo, Duke of Florence, instituted the Order of St. Stephen, A.D. 1591.

It is an instance of the Mediæval alliance between priesthood and knighthood to find Pope Alexander III. instituting an order of knighthood in which the Rule of St. Augustine was to be observed. It was called the Order of St. Jago or St. James.

As an instance of the services rendered by knights, we would point to the Teutonic Knights, upon whom the Emperor Ferdinand II. bestowed Prussia, A.D. 1226, on condition that they would subdue the infidels, which they succeeded in doing; and although this bravery may seem a species of knight-errantry when associated with times so remote, we have an order instituted in our own day, by our most Gracious Queen, as a recognition of scarcely less chivalrous service—the Order of the Star of India. This is a curious chapter in the history of this age of commerce, iron and steam power, akin to the largesse so bountifully bestowed upon Lancashire at need. St. George may be proud of England still.

CONSTRUCTIONS IN WOOD IN FOREIGN COUNTRIES.

In *Norway* we still find traces of some good ancient wood architecture, for which I refer you to the illustrations by Mr. Dahl. There are six alluding to the church at Borgund, near Bergen: six refer to the church at Urnes; and nine illustrate the church at Hittendal. When we carefully examine the style which these structures bear, we notice various elements. Above all we have Christian motives in the ornamented capitals. These are accompanied with motives from the old Norsk mythology; and we have, further, some signs of Byzantine art. The latter was introduced into Norway after the Waring expedition to Constantinople, in the year 1078; and it is chiefly displayed in the mouldings round the doors. The church at Urnes is not so remarkable as the other two, because it has lost many of its original features by subsequent alterations. From the pillars in the interior it is seen that, originally, the whole church was carved in relief, and it bears a strong Byzantine character.

It was customary, at the beginning of the Middle Ages, to vary the ornamentation as much as possible, such as the door mouldings, cornices, &c.; and we have instances where hardly two are alike in length and breadth. The light enters into these churches through small bow-windows; hence they are dark; which is further caused by smaller interior constructions, such as prayer-rooms, infringing to some extent upon the whole

design. The church at Borgund was erected in 1073: the bell in the belfry bears the inscription, "St. Laurentius, 1663," which leads us to suppose that, at the beginning of the seventeenth century, some alterations were made, which is further proved by the remaining fragments of painted glass, grey in grey, as executed in the sixteenth century.

In consequence of a church conflagration the Norwegian Government issued an order that all church doors should be altered to open towards the outside. This destroyed in most cases the original character in the design of the portals. An original side-entrance may still be seen at the Hittendale Church, from which we may infer the skill of the northern forefathers. The columns in Hittendal Church and the ceiling of the choir were originally painted in water-colours: at present they have a coat of plain oil-paint.

On the left door-post of the church in Find is a Runic inscription, in two lines, of which the following is a version:—"Bishop Rainar consecrated this church. He was followed by the following gentlemen:—Chaplain Thord, and Einar Naf, and Thrond Mok, and Thorstein Rand, and Thrond Kin, and it was he who carved these runes." Now Bishop Rainar occupied the see from 1180 to 1190, consequently this church is about 670 years old.

Besides the foregoing we find a few very early pedestals of baptismal fonts in the churches at Find, at Bö, and at Gaara. These were originally painted, as may be seen from the one at Bö. In the church at Bö remains also an interesting old pew.

Passing south from Norway into *Denmark* we meet with a very important altar in the cathedral at Schleswig. It was carved in oak by Hans Brüggemann in the year 1521. The numerous representations chiefly illustrate the life and death of Christ. The conception is true to nature and full of life.

From Schleswig we come to *Germany*. In the north of this country we have an interesting church at Smorgraw, in Silesia. It dates from the year 980: the tower is of a more modern reconstruction. The church is built of larch, and only trimmed with the axe and saw. It is 25 feet long, 23 feet wide, and 13 feet high. Adjoining the altar recess, 20 feet long, 17 feet wide, and 11 feet high. This structure has lost much of its novelty by numerous coatings of whitening.

Next are the churches at Syrin, 1204, and at Kubom, 1205, which are constructed of oak in blockbond. The roofs of most are made to project, by which a hall or arcade is formed round the enclosed room, and this may be the cause of the wood being so well preserved. Similar structures are found at Jedlownik, Muschana, Rupten, Hagan, and at Bauerwitz. The latter is decorated with colours. Of great interest are a few wooden seats in the church at Ratzeburg, which are presumed to date from the twelfth century.

A house at Hildesheim has important details, and of similar character examples exist in Halle, Halberborn, and in the Alt-Mark.

The door of St. Mary, in the capitol, Cologne, has carved wooden nails which project. In the town of Geseke can be seen interesting details amongst various timber structures. There is at Bruna a beautiful timbered gable, and of plainer character is a house in Thüringen.

An interesting early building from the thirteenth century was a chapel, dedicated to St. Jodocus, the son of Juthalus, King of Brittany (France), and the remains were still to be seen in 1846, near Mülhausen, in Thuringia. It had a vaulted roof, and the vaulted ceiling was painted illustrating the life of St. Jodocus and other Biblical subjects. A good and full account of this example may be read in Mr. Silesius von Henau's work upon this chapel.

A curious article from the thirteenth century is the state chair of Count William of Holland, whose coat of arms is carved on the same. It is at present in the possession of the King of Bavaria.

In the Church of the Cross at Coburg are the remains of an altar-screen dating from 1401. Coburg Castle has several interesting specimens of woodwork, amongst which is most prominent the Prince's Chamber. It was built in 1425. From the same period dates a richly-carved table in this building, and of further value are the wooden doors.

Here I must mention that St. Sebald's monument in that church at Nürnberg, must have existed in wood previous to its being cast, and in that material it formed a masterpiece of conception and execution.

The splendid pews in the Minster at Ulm date from 1468. The most perfect masterpiece in Germany is undoubtedly the prayer pew, made in 1472, for Count Eberhard, of Würtemberg. It has been illustrated in seven plates by Heideloff. The abbey Church at Laach, on the Rhine, retains fragments of an altar-screen carved in 1480, which bear traces of colouring.

A most beautiful altar-piece from the end of the fifteenth century is in the church of St. Wolfgang, in *Upper Austria*. It rises from a pedestal 2 feet 9 inches high, and 4 feet 8 inches wide, decorated with carvings and painted wings, by which it may be locked. Above this is the headpiece, 15 feet high. The carved figures are a little more than natural size. The scene in the centre, representing the consecration of the Virgin by God, is wonderfully executed. On the right is St. Wolfgang, and St. Benedict is on the left. The paintings relate to the life and death of Christ and the Virgin. The figures in the upper portion are Christ, Maria, St. John, St. John the Baptist, St. Michael, St. Ottilie, &c. Upon one doorway the following inscription is carved:—"*Benedictus abbas in manse hoc opus fieri fecit ac complevit per magistrum Michaelem Pacher de Prawneyk, A.D.* 1481." (Benedict the Abbot had this work made and completed by Master Michael Pacher, of Brunecken (Tyrol), in the year 1481.) In the Hospitallers' Church at Salzburg is a highly-elaborate shrine in the shape of an oblong square, carved in wood, gilt and painted. It dates from the second half of the fifteenth century, and the conception and execution are very artistical. It serves to keep the relics of saints. Of high merit are also the twelve pews in St. Barbara's Church at Kuttenberg, in Bohemia. The seats are partitioned, and have a canopy at the back. These were worked by Meister Jakob, and are certainly one of the finest specimens of Gothic art from the fifteenth century.

Near Ishel, in *Austria*, lies in a picturesque situation, the small market-place, Hallstadt. In the parish church of the same is an elaborate altar-piece, of high artistic conception, executed in limewood. It is decorated with gold and colours, and dates from the end of the fifteenth century. The carved groups and the paintings refer to the life of the Virgin Mary. The height of this altar from the stone pedestal is about 26 feet. In the course of time it has suffered much; but its original form and details have been gathered and published by Jobst and Leimer in their work, "Mittelalterliche Kunstwerke aus Oesterich, 1862."

The same artists furnish also a view of an altar-screen in the church at Waldburg, Upper Austria. This bears the date of 1521, and has many beautiful features.

From the fifteenth century are the wooden doors in St. Gereon's, at Cologne, very striking by their peculiar carvings. The figures project very little, which the artist, no doubt, purposely determined in order to avoid the heavy weight of the wings. They were originally painted in harmony with the character of the whole building. In this same church are also some old pews of romanesque character, worthy of notice.

Of the same period exists, at Nürnberg, a piece of furniture serving as a cupboard, with stand. It was entirely covered with colours. In the same town is a coat of arms, carved in 1481, illustrating the union of two families. In Kidrich is a fine prayer-stool; and a reading-desk frame, 1496, is in the church at Pappenheim, where also portions of old pews are remaining.

The abbey church at Blaubeuren retains some good woodwork, more especially the magnificent altar-piece, richly carved, and noble in appearance. Of good character are also the pews in St. George's Church, at Altenburg.

The doors at St. Laurentius's and at St. Sebald's, Nürnberg, are both examples from the end of the fifteenth century.

Some excellent pews are preserved in Seidelfingen, in Würtemberg; and a number of doors appear in Nürnberg, Ober Kranichfeld, and Denkendorf.

In the cathedral at Halberstadt is a splendid example of carving over a tabernacle, and some curious poppy-heads from the time of Bishop Ernest of Saxony.

The Townhall of Nürnberg occupies the attention of every visitor by its ancient woodwork, from the fourteenth and fifteenth centuries. Amongst the most important is the large ceiling over a room 80 feet by 60 feet, which was, however, not finished until 1613, by Mr. Behain.

Prettily carved flowers are seen in the pews in St. Laurentius's Church, Nürnberg. In the domestic buildings attached to this church are wooden ceiling and doors, with interesting details. In the former nunnery church at Löwenthal, on the lake of Constance, we find fragments of an altar-screen and pews which are neat and manifold in their design.

The pews in St. Clara's Church, at Nürnberg, are very good, and were made in 1515. Similarities are found in Tübingen, in Stuttgard, and in Bebenhausen.

In a private house at Nürnberg are two columns, supporting galleries, with carved railings. A house in the Burgstrasse, in the same town, retains a very interesting door; and one similar to it is at Castle Salzburg. In the armoury at Nürnberg is an old chair from the time of the Emperor Maximillian I.

The woodwork in Castle Hohenstein, Würtemberg, is also worthy of attention. Plate 6 represents a magnificent door, made between 1535 to 1540, and a richly-carved table from the beginning of the fifteenth century is on plate 67.

In the church at Herrieden is a reading-desk from the end of the fifteenth century, and a very rich table with carved and inlaid decorations is in the Abbey Kaisersheim, in Swabia.

In domestic architecture we find interesting features in Salzwedel, Brunswick, and Halberstadt. In Hildesheim are very good carved transoms. A door in Salzwedel deserves more special attention. In Gosslar is a fine door, with richly carved frame: the wings seem to be of later origin. Wardrobes of this time are met with in Salzwedel, Nordhausen, and Calcar, on the Rhine.

From the middle of the sixteenth century are the ceiling and wainscoting in Castle Füssen. The former is a most remarkable production of the period, and partly decorated with colours. In Stendal is a bay window, supported by a column, bearing the date 1650. Similar details are found in Gosslar, Brandenburg, and Magdeburg.

Doorways of this period are seen in Salzwedel, Taugermünde, and on St. Martin's Hospital, Nordhausen. Some of these bear the date 1530.

In St. Catherine's Church, at Brandenburg, is a wooden floor under the organ, which is painted in the character of the seventeenth century. Ceilings in the same style are those in St. Anne's, at Stendal; in the cathedral at Brandenburg; and in the town-hall at Nordhausen.

Open timber roofs, such as we have in England, are scarce in Germany. One reason for this may be that, in the latter country, they adhered more to the stone vault.

Before I conclude my remarks upon the wooden structures in Germany, I refer to the rustic habitations which are scattered through the Black Forest and through Switzerland. They are the result of study and of experience, from the fifteenth, sixteenth, and seventeenth centuries. Many of them are really charming, and display happy motives. It will be seen that a great similarity exists in these structures; but each canton (or county) bears a character of its own. All those who wish to get information about this style of architecture will find it in Eisenlohr, "Holzbauten des Schwarzwaldes;" Hochstetter, "Schweizerische Architectur;" Varin, "L'Architecture Pittoresque en Suisse."

In Spalatro, in the kingdom of Dalmatia (Austria), the visitor's eye is attracted by a fine wooden door at the cathedral. It was made by A. Guvina, a native of that town, in 1214. This door has two wings, each divided into fourteen panels, in ornamented frames. In the centre of the panels is the relief, 1½ inch deep, 13 inches high, 16 inches wide. The ornaments are fastened with wooden pegs. The total height of the doors is 16 feet 3 inches by 10 feet 6 inches, and 2½ inches thick. The twenty-eight carved reliefs refer to the birth, the life, and the death of Christ. The technic is very remarkable, and it is one of the most ancient that we know of.

In the parish church at Arbe, in the same kingdom, are seen some fine pews, bearing the date 1445. The style in which they are executed denotes them to be Venetian workmanship. They are bold and energetic in design, and create a good effect. (*Jahrbuch yur Erhaltung der Baudenkmale im Oesterreischischen Kaiserstaate. Band* 5.)

Italy.—A beautiful construction in wood was seen in former years in the cathedral at Messina, in Sicily. It is much to be regretted that this fine work was destroyed during the late revolution, 1859, and we have in future only to look for it in the illustrations by Messrs. Morey & Rous, "Charpente de la Cathédral de Messine."

In order to understand the various features displayed in this edifice, it is necessary to call to our memory a few historical facts. The original inhabitants of Sicily were Pelasgians. It became

a colony of the Phœnicians and of the Greeks. The latter founded Messina, and the traces of Hellenic art are to be found in all the remains of the old monuments throughout the isle. In the third century before Christ, Sicily became the battlefield where the Carthagenians disputed to the Romans the supremacy of the world. Since then it belonged to the Romans, who were conquered by the Goths under Theodoric. In 827, after Christ, the Saracens invaded Sicily; and towards the end of the eleventh century it was conquered by the Normans. The character of these various tribes is traceable in the Cathedral at Messina, but the Grecian style is predominant. The carpentry itself is of plain construction, and it is the decoration which occupies our attention most. The paintings must have been made after earlier examples, introduced by the Greeks. The cathedral itself was erected under the Norman King Roger II., in 1130, at the time when the country was in full prosperity. It shows the form of a Christian basilica, combined with the richness of Grecian decoration, and some limited features of Saracen architecture. The Roman basilica is displayed in the shape of the edifice. The Pointed arch refers us to the Pelasgians, and the Byzantine style we see in the painted figures. Besides these, we notice the Mauresque in the Arabesque ornaments. The domineering Grecian character is displayed in the correction and in the arrangement of the ornamentation of the carpentry. Although this monument was erected during the Middle Ages, it must be looked upon as a copy of antique art.

From the sixteenth century dates the fine and most elaborate wainscot in the vestry-room in St. Maria's in Organo, at Verona. The author of this beautiful piece of workmanship was Fra Giovanni. It is certainly the finest in Italy, and its effect is more heightened by the paintings above on the vaults which were made by Moroni. In this same church is also preserved a reading-desk by Fra Giovanni. In its general appearance it looks a little heavy; but it has one peculiarity: the carver has represented through inlaid work an antiphonary, which I have not met with elsewhere.

The seats in Santa Maria Gloriosa de Frari, at Venice, are from the fifteenth century, and are a mixture of German and Italian art.

From the sixteenth century remain pews in St. Peter's Church, at Perugia. The artist who produced these had, no doubt, made his studies in Rome, as the example displays much of ancient Roman art, and as such is very fine.

From the end of the fifteenth and from the beginning of the sixteenth century are the pews, decorated with marquetery work, at Sienna and at St. Assise, near Florence.

A fine specimen of Italian Gothic is the wooden reading-desk which stands in the apsis in St. Ambrose's, at Milan. Jos. Justen.

THE ARCHITECTURAL EXHIBITION.

Our notice, last week, of the Exhibition now open in Conduit-street, referred exclusively to ecclesiastical architecture; but many of the drawings of recently executed or designed works in the branch of our art, were left unmentioned. It has been remarked to us, that writers who make question of the appropriateness of the Mediæval plan with broad aisles and long transepts, for the Protestant form of worship, do not recollect how many churches have been built of late years, quite without aisles; and that the old examples, indeed, are numerous. Instances of the latter arrangement, however, are almost exclusively those of small churches; and efforts to do away with the obstructions to the view of that portion of the interior where the service is conducted, and to hearing, may really be considered as limited to the case of the designs that we described, where the aisles are intended to serve merely as passages, or to the Dissenters' chapels that we noticed, where iron columns are substituted for massive piers. The growth of the latter class of structures,—nourished, perhaps, by the decided course taken on the occasion of the competition for Mr. Spurgeon's chapel,—shows that the importance attached to preaching is not lessened since the eighteenth century, the latter half of the seventeenth century, the period especially comprising, with that of the construction of galleries in churches. Meanwhile there are many who, considering that the importance of preaching should be recognized in the plan of the structure for the Reformed Church, whilst that galleries, or any arrangements of seats not facing in one direction, are unsuited to a house of prayer, point to the existence of models in some of the churches of the preaching friars, which would be more in harmony with the Protestant form of worship, than the arrangement usually adopted. To the subject of these models, possibly we may advert at some future time.

To see what has been the usual arrangement of plan, we may not unfairly take the evidence as we find it in the works that are shown in one drawing (No. 188) by Mr. John Norton. These include many of domestic architecture, and amount to seventy or eighty in number; whilst in the frame, we find clearly shown the plans of ten churches. The smaller buildings, four in number, have no aisles: the six others are designed with those features of plan; and have them of width sufficient for the reception of seats. All the plans have long chancels, unless with one exception; whilst two of the designs have also transepts in the rear of the position of the reading-desk and pulpit. The erroneous course that some architects are following as to uses that some architects are following as to uses of a class of buildings, leads them to a similar course in the decorative part of their architecture. This part, as in the case of the works just now noticed, has every good quality but that which memory alone does not supply. Of that, novelty, we demand very little, and we even dread its dominance; but that it is an essential in art nevertheless, we have often shown. But, can any architect under the prevalent fears of employers about deviating from thirteenth and fourteenth century precedents, produce a multitude of works in ten years, without danger of getting worse at every fresh case? Two designs (280, 290) for the new church at Hertford, by Messrs. Thos. Smith & Son, Geometric Decorated in style, and one of them certainly not a bad production, are yet behind the requirements, if we are right that something is required in art-architectural beyond details that are those of the "Decorated" period, and something in plan distinct from the arrangements of the Roman Catholic church in the Middle Ages.

In certain architects' works, indeed, we excuse what is left of Mediævalism, for the sake of an unusual amount of freshly-designed detail. Amongst such works are those of Mr. Street, which are represented in Conduit-street, though rather less forcibly than heretofore. His principal drawing (152), "Interior of St. Peter's, Bournemouth, now in course of erection," is more remarkable for its workmanship than for those piquant bits in which the architect usually indulges; whilst in the "Elevation of the Font, Font-cover, and Metal Baptistery, about to be erected in the church of St. James the Less, Garden-street, Westminster" (216), there are details which along with the general form, are very questionable. Such are those of the shafts. When decoration is added to members of the sort in question,—unless it be ornamentation of a mere necking, or of the whole shaft,—it is usually applied to the lower portion of the shaft. There should be argument other than that of novelty, for deviating from an arrangement which is so general; and we do not discover it from the design before us. The design for the proposed church of St. John, Torquay (233), where the tower has a lantern-terminated capping, and four corner pinnacles, each lead-covered and square on the plan, is the best of the works that Mr. Street exhibits. His "Chapel of School-room, &c., now in course of erection at Uppingham, Rutland" (287), is rather tame, from his hand. His "Prospect of the Church of St. Michael, Penkivel" (235),—like the last, a coloured drawing,—shows a building "now being restored" under his care. Beneath a lich-gate, in the centre of the way, appears a block of masonry, slightly decorated at the sides, the use of it being to rest the coffin upon. But we can recognize little effort in this architect's works to solve the problem we have adverted to; indeed, some of his interiors are remarkable for massiveness of their piers. Similar remark might be made of Mr. Slater's works; though there is always something noteworthy in them. His "Burntisland Church," of which an exterior and an interior view (204, 205), are exhibited, is built on sloping ground, which gives the chancel considerable height on one side; and it has a lofty straight-sided, and very blank-looking tower, surmounted by a short spire. Internally, the church is remarkable for the arrangement of the chancel. A flight of steps, broken only by a landing, occupies the middle of the chancel, starting from the usual position of the screen and terminating at the commencement of the polygonal apse. Within the apse, stands the altar, a *baldacchino* or canopy on four shafts, quite detached from the wall at the back. A low screen-wall, similar to that now generally substituted for a roodscreen, is returned as parapet to the steps, and appears also to serve as the front and desk to the stalls. We cannot discover whether the structure is for the Protestant or the Roman Catholic ritual; but if the arrangement of stalls in a choir or chancel, and the custom of conducting part of the service at a distant table or altar, are to be maintained, this disposition of the eastern portion of a church may have some advantages. The cubical form which Mr. Slater has adopted for the upper part of his pulpit, appears, as he has it, very inferior to forms which are of the circle or octagon on plan. In the same architect's Honolulu Cathedral (213, an interior view), he has relied almost entirely on painted decoration. The piers are simple parallelograms on plan, and carry pointed arches, which are without chamfers or mouldings. The colour consists of occasional bands and rosettes, very plain in treatment, with more elaborate ornamentation in the place of imposts. This latter forms the termination to a subject, on each pier, presenting figures of the saints. Spandril-trusses, boarded over and perforated, are placed beneath the tie-beams, dividing the length of the nave into the bays, by a succession of pointed arches; whilst the timbers above the tie-beam appear to be plastered over on the upright face,—the triangular compartment thus formed, being treated as a space for painting. The figures represented have an archaic, not to say deformed, manner; but, in several respects, the architect's work has merit. Form, at least, is not thrown away for the sake of colour. The whole design should be judged whilst recollecting the class of mind to which, in this particular cathedral, decoration will be addressed. The same architect exhibits a view (265) of Mr. Beresford Hope's house, Bedgebury Park, as altered by the late Mr. Carpenter. It is a building of Italian character, with two stories of dormers in the roof. To the church adjoining, Mr. Slater has added a spire. Had he looked no further than some of the Italian churches of Wren, he might have found out how to produce a spire more worthy of himself as a Gothic architect, than this one is, at Bedgebury. Amongst the numerous works that are exhibited by Mr. E. B. Lamb, is (in No. 159) a sketch design for a church, "proposed to be erected near New York, America, a plain building, to accommodate 5,000 persons;" but there is no plan; otherwise it might have been interesting to see how the architect proposed to deal with so large a number. We observe, however, that the main portion of the building is a square on the ground, terminated by a pyramidal roof-covering and a square lantern; whilst that projecting east and west, are narrow portions of the plan, one of which is flanked by two towers in the re-entering angles. Mr. C. H. M. Mileham exhibits sketches (242) of a design for a church to hold 2,000 people. It has no piers or galleries; and the plan is a square, with side recesses, and a shallow recess as chancel, from the middle of which projects an apse. The central area is domed over on pendentives; whilst the sides are vaulted. Externally the design is plain, showing only the angle portions and centre surmounted by pyramidal roof-coverings, and the doorways and other apertures arch-headed; whilst a band of sculpture encircles the lower portion of the building.

Several works in ecclesiastical architecture, by Mr. Goldie, are in the Exhibition; but one of them, the Conventual Church of St. John of Jerusalem, Great Ormond-street, erecting for Sir George Bowyer (72), is, so far as we are able to judge from the elevation that is shown, the least satisfactory of the works by the architect that we have seen. A very plausible argument might be put forward to the effect that those who are known as Gothic architects,—who are not ignorant of the principles of design in general, or of history of architecture in its varied examples,—would be those to whom, if the Gothic were forbidden, we should look for the regeneration of architecture. For not having power or temptation then to adopt the features of the Gothic which are not those of our civilization and time,—and which by their own account, they are striving to eliminate from the Gothic,—these architects would supply to the other style which they would have to take up both the originality in features, and the full measure of correction, which are within the scope of the Gothic, and are all that the Italian style has wanted,—substituting spirit for tameness, and imparting that propriety and truth of structure which have been too often subordinated to supposed effect. In this way, it might reasonably be argued, that the last selection of the architect for the Government Offices, with the stipulation imposed upon him,—far from being, as has been said on both

sides, an unwise measure,—was the most judicious step that could have been taken with the aim at a future grand era in our art. Surely this ought to be the result, if the present men are artists, and not merely clever compilers. Unfortunately, here in the Exhibition is a case where such reasoning is pulled up short: and, referring to Reynolds, where we find that *invention* is nothing more than a series of images previously gathered and deposited in the memory, we are brought to a conclusion that the modern Gothic art must ere long be worn out, if its professors are able to devise no greater amount of new material than they here give. Mr. Goldie in this conventual church, has produced so spiritless a design, that his presentation of Italian architecture must be repudiated by all who are aware of the capabilities of that particular style, as by many others who regard taste as favoured by neither style exclusive of the other, or especially. An arrangement of four Ionic pilasters below, and four Corinthian with a pediment above; an ordinary doorway, and a window with broken pediment; certain emblems which have little of ornamental character; and a dome appearing in the distance, are the features. Mr. Goldie must have tried to make the Italian repulsive. His other works in the Exhibition include a view (187) of the "Interior of St. Peter's Church, Phibsborough, near Dublin,"—an excellent drawing, showing the chancel and transepts, with many altars,—a "Prospect of the Priory of Our Lady, Richmond, Yorkshire" (310), one "of the Convent of Mercy, Ballina, county Mayo, Ireland" (311), and "St. Wifred's Church, York" (364). He also exhibits an "Elevation of Principal Front for Hôtel de Ville, Brussels" (318), and "Sketches for Portions" of the same building (348), which were submitted in competition in 1861.

Amongst the drawings of works in ecclesiastical architecture, are certain "Studies" (374, 377, and 378), by Mr. Henry Clutton, referring to buildings designed and executed during the last three years; and Messrs. Willson & Nicholl, besides a drawing of "St. Charles Borromeo's Church" (162), and one of metal-work (241), display in one frame (266) designs for schools, cottages, chapels, altars, and other works, which have considerable merit. With these is a drawing of the Chesapeake Memorial, Southsea, Hants, a monument of the columnar form, and which is neither a large-scale copy of Doric or Corinthian, nor a bad thing in the main. However, the pedestal is sadly deficient in base-moulding. Mediæval structures, with which the architects are familiar, invariably have the base spreading and boldly marked, as requisite for the idea of support. Could we generalize from such instances of inaptitude to grasp principles that may be learned in any good style,—principles which are those of universal architecture,—and to apply them universally, we should be in danger of arriving at a low opinion of the merits of some of our architects as artists. The study of models, even those of a single style, should teach something more and better than the imitation of them, or of their style restrictedly and alone. Amongst the designs for churches, in the Exhibition, should be named the design by Mr. Ashpitel for the "New Church for Oamaru, New Zealand, to be built of wood, plastered between the timbers, and covered with shingles," of which "the idea is taken from an old chapel near Pershore, Worcestershire." The design here is very simple, though ecclesiastical; but it is suggestive of works that might receive a considerable amount of decoration from native hands, and preserve records of ornamentation that may shortly become extinct. The wooden will should have been placed on stone, both for durability and effect.

Without attempting a classification of the structures represented in the Exhibition, and the designs, comprised in the secular division of buildings and architecture, we will now mention some of the principal works of that division. Amongst them are two designs for completing the International Exhibition building decoratively. One, by Mr. J. Giles (234), would make very great alterations in the course of "improving" the building, the most important being the removal of the domes, and the reconstruction of one of them in the centre of the plan. Besides this central feature, there would be three domical roof-coverings to each angle-block, and many additions in details, the general result being a somewhat better effect than that of the existing structure. The other design (256), "A Suggestion," by Mr. H. B. Garling, certainly does not seem to us as it is described, in the same *motif* as "the arcades of the Horticultural Gardens." Its regular bands of colour, and its domes, as well as certain features like minarets, make the whole design Mediæval-Egyptian or Saracenic; and because the design is markedly of that character, it is not as the author considers it, "in an appropriate style." Mr. Giles also shows a photograph (34) of his accepted design for the Langham Hotel. The details of the windows too closely resemble those of the Grosvenor Hotel. A tower with domical roof-covering is added. Two of the competition designs for Malvern College, are shown. One of them (121 to 123) has some good details of Early English character, modified by the introduction of sculpture in *tympana* of arches; but certain window-mullions would be weak, of the length they are shown.

Some good drawings for the decorations of the Bath theatre, by Messrs. Green & King, as proposed in the second premiated design by Messrs. Green & De Ville (116, 117), are hung side by side with others for the decorations of the Hartley Institution, Southampton (93, 96, 100, and 105), bearing the same names of architects and decorators. These drawings deserved to be better placed, not only on account of their merits, but because every opportunity should be taken to demonstrate the importance of interior decoration as a subject for the attention of architects themselves. All decoration is part of architecture; coloured decoration is predominantly concerned in the effect of most interiors; and architects should never have allowed the study and control of it to escape them. Photographs from plans of the Bath Theatre, the building by Mr. Phipps, lately completed and opened, are shown (177), but at too great a distance for examination.

One of the most important drawings in the collection, from the subject, and the drawing itself, is the View of London from the Victoria Tower, Westminster (179), which helps to show Mr. H. R. Newton's proposition for the embankment of the Thames, and the general character of buildings that might line the new roadways. Without a plan, and elevations of the two lines of quay, it is impossible to understand all that the project included. It is only plain that the author was in favour of a high-level line, with descents from it, to pass under the bridges, in addition to the junctions with the bridges at their level; but we are left in doubt as to the mode of passing the Houses of Parliament, as well as Somerset House, and whether there would be sufficient headway under the Charing-cross Railway-bridge; what would be done with the barges, and floating timber, and as to the goods at present craned into warehouses; how the arches designed to carry the roadway would be kept free of filth and silt, and how they could be properly watched by the police, as well as how the sewer would be provided for. But there is reason, beyond what is shown by Mr. Newton, for apprehension that the design carried into effect will be far from that which the public convenience demands. Mr. C. Henman also exhibits a design (198) for embanking the river, but only in a view. It is evident, however, that on the north side he would contemplate two roadways—a high-level and a low-level, the latter passing under the bridges, and the former intersecting their causeways at the ends. The low-level roadway would be lined, of course on one side only, by shops or other premises, forming the substructure of the high-level way. But, we must repeat, views are of no use without drawings to measured dimensions; and how exhibitors can omit to give the information that plans, elevations, and sections alone can afford, is inconceivable in an exhibition addressed to architects.

Perhaps the best illustration of the decorative character of a recently-erected building is comprised in the two views (143 and 147), and the photographs of details (144), of the seat of Mr. Manners Sutton, Kelham Hall, Newark, Nottinghamshire, by Mr. Scott; though no plan is attached. The general character of the Gothic, which is expressed in red brick and stone, might be anticipated by those who are familiar with Mr. Scott's recent manner, which may be said to have started with his Hamburgh Town-hall design, moulded on the architecture of Mediæval works of the class in Flanders, Belgium, and the Netherlands, and to have culminated in his competition designs for the Government Offices, which came subsequently to the commotion raised by Mr. Ruskin about Italian Gothic. Assertions made about the time of the competition, touching a want of scope in the Gothic style for the expression of modern ideas, put Mr. Scott on his mettle to prove the contrary; and he has ever since proceeded as though the object of designing were to exhibit the greatest possible variety of details, yet to show that those of common or vulgar use could be dispensed with at will. Such variety, along with good carving, for which some of the credit is due to exertions which he has made in connexion with the Architectural Museum, are very marked in this design, in which we find pointed-arched windows of Early "Decorated" character and cusped sub-arcuation, other windows with horizontal lintels below the arch, and the *tympana* pierced,—arrangements always reviving the question whether rooms are properly lighted and ventilated in the upper part,—windows of the Venetian Gothic type, or square-headed with tracery; parapets and balconies filled in with diminutive shafts and trefoliated arches; dormers, oriels, window architraves of Renaissance character; and a clock-tower, straight-sided, and finished with some form of gabled roof or pyramidal capping, and with a lantern. Such is the style that Mr. Scott has formed and may be recognized by; though we might wish some features of it otherwise than they are. But we do not know that the architect has used the general features with better effect decoratively, than in the design for Kelham Hall. Mr. Scott also exhibits several views (197) of the Westminster Chapter-house, showing the proposed restoration; and the "Reredos—Lichfield Cathedral" (305); whilst from the hand of Mr. J. D. Wyatt, we find (239), the chapel about to be erected for St. John's College, Cambridge, (designed by Mr. Scott), the subject of our illustration last week.

Mr. Truefitt exhibits a large drawing (226) which includes views of numerous buildings that he has designed and superintended in thirteen counties, and representations of sundry monuments, fittings, and articles of furniture. Amongst the objects that are of minor dimensions, are the Manchester Cathedral font and cover; and amongst the houses are several, in the neighbourhood of Holloway, in which whilst mullions are abandoned, some of the best features of the Gothic are retained, the result being works that help to prove, what many even have to learn, that plain and cheap construction, and good effect, are not inconsistent with one another.

We have not yet finished.

BRITISH SCULPTORS.

THE FAMILY OF "THE CURES."

A CATALOGUE of English sculptors exhibits a succession of sculptors in the same family:—Thus we have the family of "the Cures," *temp.* Queen Elizabeth and James I., the family of "the Stones," in the reigns of James I. and Charles I.; the large family of "the Christmases," in the same reign; the elder and the younger Bacon in the long reign of King George; two "Theeds," two "Wyons," and a long generation of "Westmacotts;" and yet our sculptors have in many remarkable instances been childless of any progeny beyond men and women, and gods and goddesses, in marble and plaster. Roubiliac died childless, Nollekens died childless, Flaxman died childless, Chantrey died childless, and all four were married men. Cibber left a son, who took, not to his father's compasses and chisels, but to literature and the stage. Gibbons had a family of daughters; Wilton left a lovely daughter immortalized in "Boswell," and a son long remembered *out* of his father's calling, as "Beau Wilton," and nothing more. What I have to tell in my present communication will relate to "the Cures."

There was living in Southwark, in the City of London, when (1603) King James I., removing the Tudor griffin, brought the Scottish unicorn into the Royal arms of England, a certain *Cornelius Cure*, sculptor, and servant of Queen Elizabeth, holding and exercising the office of "Master Mason" to the Crown. *Cornelius* was continued in his office by King James, and dying in 1607, without a will, administration of his effects was granted to his son *William*. *William*, with his father's good luck (how unlike the Hanoverian dismissal of Wren for Benson), succeeded his father as master-mason. *Cornelius*, at the time of his death, was busy on the monument of Mary Queen of Scots for Henry VII.'s Chapel, in Westminster Abbey, and *William* Cure, his son, completed and erected the Mary monument; that monument which *alone* preserves to us (in spite of Mr. P. F. Tytler and Mr. Albert Way), the *true* portraiture of Mary Queen of Scots.

In Southwark, in St. Saviour's Church, the church immediately adjoining the parish of St. Thomas the Apostle, is a monument to Thomas Cure, saddler to Queen Mary and to Queen Elizabeth. The saddler died in 1588. What relative was this Cure, saddler to the Queen, to the Cure who was master-mason to the Queen? Mr.

Corner, F.S.A., who is "well up" in all Southwark matters, will, perhaps, assist a future historian of English sculpture with the information he requires. The records of Cure's College, in Southwark," will, in all likelihood, throw some light on the point.

With the metal work of the Mary monument Cure had nothing to do. Witness the following entry, to which some years ago I directed my friend Mr. Albert Way's attention.

"To *Thomas Bickford*, smithe for making and setting up an iron grate for the tombe sett up in Westminster Abbye for the late *Quene of Scottes*, conteyning in compasse 14 foote and in heighte five foote besides the garneshments being all well wroughte and the garneshments & pillars clene filled—CIIIJXV." [*i.e.* 195*l.*]*

Cure's "pay" for his portion (the marble work) of Mary's "tomb" was in all 825*l.* 10s., or two thousand pounds at least of the money of the present day. To this we must add 195*l.* to Bickford for the metal work about it, and 265*l.* to James Mauncy for the painting and gilding.—some 1,350*l.* of Queen Victoria money more. The "Issues from the Exchequer," printed by Mr. Devon, contain these entries: Mr. Wornum, Walpole's last editor, has entirely overlooked them.

Another example of William Cure's skill in his art is the Tomb at Cranford, in Middlesex, of Sir Roger Aston (Master of the great Wardrobe to King James I.), his two wives, four daughters, &c. Aston's agreement with Cure is in print;† and I the more readily refer to it here, as the "terms" "conditions" and "percentages" made with sculptors and architects, have been the subject of a curious and not very satisfactory correspondence in the columns of the *Builder*. In this agreement he describes himself as "William Cure, Esq., of St. Thomas the Apostle, in Southwark," and undertakes (4th January, 1612), for the sum of one hundred and eighty pounds (180*l.*), "well and sufficiently, and workmanlike, to the best of his power, art, and cunning, in good and artificial order, to hew, cut, work, carve, make up, and finish, of alabaster tutoh, rance, and white and black marble, one tomb or sepulchre for the said *Sir Roger Aston*, and his two wives and four daughters, with the seven pictures to be kneeling upon the same, and the same tomb to be of length, breadth, and fashion of a pattern drawn by the small sort, subscribed with the hand of the said Sir Roger Aston and William Cure, and remaining with the said William Cure in all points as comely and cunningly, and with as much work as the same pattern doth purport and signify, with all manner of arms, scutcheons, and superscriptions that shall be desired by the said Sir Roger Aston, his heirs, executors, or administrators, and the said tomb so to be made and finished as aforesaid, the said *William Cure*, his executors or assigns, at his and their costs and charges, as well in carving, as in and by all manner of stuff and workmanship, shall cause to be *set up, placed, fully finished, painted and gilded, in the parish church* of Cranford, at or before April 30 [1613]."

Let my readers who have not an opportunity of seeing the Cranford monument look at it as it is engraved in the "Environs" of Lysons. An experienced eye in estimates, with the monument itself before him, could doubtless calculate to a pound what the cost would be of a monument of a like description and size, and by a sculptor of a like reputation to Cure's, at the present day.

This same *William Cure* of ours worked under Inigo Jones at the Banqueting House at Whitehall. As master-mason to the Crown, Inigo as surveyor of the Works to the Crown was bound to employ William Cure. Nor will a mason of the present day find fault with the goodness of the work which Cure performed, viewed, as it is now to be viewed, after two centuries and a half of London smoke, and some coarse restoration and picking out. Cure's remuneration will excite a smile among our friends, in and out of the famous masons' strike. This skilled master-mason to the Crown, with Inigo Jones to look after him, was paid from the 1st of June, 1619, to the last of February, 1623, at the rate of eighteen pence per day, and for fees for the same period at twenty marks per annum. My father, as master-mason and foreman to Sir Francis Chantrey, was—taking the difference of moneys and the price of provisions into consideration, and Cure's wardrobe allowance withal,—no better paid, if indeed as well.

William Cure continued master-mason to the Crown until his death. He was buried in the church of the parish in which he lived, the register of St. Thomas the Apostle, in Southwark, containing the following entry, now first published (price to the writer for fees for searching, only five shillings):—

"1632, *Aug.* 4. *Buried William Cure, Esq., the King's mason.*"

I like the *esquire* of the entry,—*Sir* Inigo that "would be" was nothing more.

This "calling up" of the church of St. Thomas the Apostle, in Southwark, reminds me very pleasantly that the sculptor of Shakespeare's bust and tomb at Stratford-upon-Avon, in Warwickshire, was "Gerard Johnson, a Hollander, in St. Thomas Apostle's." This, Dugdale, a herald, antiquary, and the historian of Warwickshire, assures us. I regret to add that a long and costly attempt I made to unearth this Gerard Johnson in the registers of St. Thomas the Apostle was to no effect.*

Cure's successor in his office of master-mason to the Crown was Nicholas Stone, of whom there is an account in Walpole. To what Walpole has said of Stone I shall have something to add in a future communication.

Peter Cunningham.

* Works Accounts of the Crown in the years 1613–1614, formerly in the Audit Office, Somerset House, now at the Record Office, Chancery-lane, London (see a like entry in Harl. MS., 1583). Harley, Earl of Oxford's brother, was an Auditor of Imprests.

† *Gentleman's Mag.* for Feb, 1830.

* I have said in my "Handbook of London" (second edition, p. 493), under the head of St. Thomas the Apostle, Vintry Ward, that Gerard Johnson lived in that parish and ward. I am now convinced of my mistake, and feel assured that Gerard Johnson lived, like Cure, in St. Thomas the Apostle, Southwark, near to the Globe Theatre, and that he must have often *seen* Shakespeare. If I am right in this conjecture, the Stratford bust becomes additionally valuable as a *likeness*.

OPENING OF THE BAHIA AND SAINT FRANCISCO RAILWAY.

A correspondent writing, February 11th, from Bahia, says,—You will be glad to hear that the Bahia and St. Francieco Railway was opened for traffic on the 31st of January; Mr. Hutton Vignoles (the resident engineer) taking charge of the train which brought us down. We had the president of the province and a commission of engineers up from Bahia to examine it, who pretended to be very wise; but there was not a man amongst them who appeared to have any idea how the work had been executed; and they were continually making absurd mistakes and exposing their ignorance. Before you receive this, you will have known of the diplomatic breach between the Brazilian Government and the English minister Christie, which led to the seizure of Brazilian vessels by English men-of-war. There is a strong feeling against the English in Bahia; but as yet none has been molested or insulted; the precaution having been taken to send up an English frigate, the *Satellite*, the day the mail steamer brought the news from Rio. Mr. Dick, the superintendent, purposed inaugurating the opening of the whole line of railway by a dinner and a ball on the 4th inst., to which he, of course, invited the President. To his astonishment, the President said he would not be responsible for the safety of the guests, in case of a disturbance by the mob: so the affair was put off, and notice given in the public papers on the morning of the day on which it was to take place. Mr. Ogilvie gave a dinner to the workmen on the 6th inst., which was attended by the resident engineer and others, and went off well. The health of the engineer in chief, Mr. Vignoles, sen., was drunk enthusiastically.

ITALIAN ARCHITECTURE AND ITS VARIOUS EUROPEAN OFFSHOOTS.

At a meeting of the Liverpool Architectural Society on the 25th ult., the second part of a paper by Mr. Samuel Huggins was read. It was a Historical and Critical Survey of early Renaissance, Cinque-cento, and modern Italian Architecture, treated as one continuous style or connected series of styles, tracing its various mutations from its earliest dawn to the present century, and its varied branchings into all the countries of Europe, including its career in Spain, France, England, Germany, the Netherlands, Russia, and the Scandinavian lands, with a descriptive and critical account of the most noted and typical edifices in each style. It is to form the concluding part of a volume shortly to appear under the title of "The Course and Current of Architecture; being a History of its various simultaneous or successive Phases in all Times and Countries." In his introduction, the author remarked that Italy, the hotbed of art, which had witnessed the full development and application of the columnar system of Greek architecture, and its coronation by arch and dome, became the scene of its revival. The first awaking of antique art in the West was owing to the increased intercourse occasioned by the Venetian conquest of Constantinople in 1203, between the Italian and Byzantine artists, among the pupils of which latter was Nicolo Pisano, the father of modern sculpture. In his architectural works—for he was architect as well as sculptor—we saw the earliest dawn of modern architecture which first assumed that unique form which had received the name of Renaissance—a style distinct from the Gothic of Italy, which it superseded, and from the more purely antique, to which it led. He had placed the day-spring of the Italian style at an earlier period than it was generally referred to, and to an earlier period than might be at all supposed auspicious to such an event. It was a book-burning, heretic-hunting age: philosophers, and particularly mathematicians, were looked upon as dealers in the black art, or at least as of doubtful orthodoxy. Of mathematics and physics even the clergy were ignorant—so ignorant that, as Anthony à-Wood says, they knew no property of the circle but to keep out the devil, and thought the points of a triangle would wound religion.

But this thirteenth century witnessed a change in more than one department of intellectual inquiry. It was a significant fact that painting and sculpture and architecture became freed from their thraldom at the same time as physics and mathematics. Cimabue, N. Pisano, and Arnolfo, of Florence, the fathers of painting, sculpture, and architecture respectively, were contemporary with Roger Bacon, the founder of experimental philosophy, by which tyranny and persecution were doomed. The waters of barbarism still flowed over Europe, but they were abating. Italy, the Ararat of the intellectual world, was heaving her head above the floods; and art, like the dove from the ark, could not find rest for her foot. In the thirteenth century, the schoolmen, with Aquinas and Duns Scotus at their head, were still all potent in Europe; but on the threshold of the next appeared the three renowned fathers of Italian literature, Dante, Petrarch, and Boccaccio, whose contemporary was Giotto, one of the greatest names of which the art could boast. The next great architect to Arnolfo was Giovanni da Pisa, the architect of the Campo Santo, at Pisa, perhaps the most beautiful cloister in the world. This was an attempt at the new style, which was formed by a blending of the two styles, Gothic and Classic. Mr. Huggins entered into a full description of the general style and of its system of decoration, which had other sources than the Gothic and Antique, in the gorgeous styles of Byzantium and the Saracens through Venice and Sicily. This style he considered reached its perfection of beauty in the fifteenth century, at Venice and the Venetian cities, and in Lombardy. The Certosa, at Pavia, and the court of the great Hospital, at Milan, were transitional specimens conducting to the full Italian or Cinque-cento style. This Renaissance was the general style of Italy till the end of the fifteenth century, when it gave place to the Cinque-cento or full-grown Italian, which had first appeared in the works of Brunelleschi about 1430. It did not, however, cease to be practised on the introduction of the severer style, but continued in Italy, and was employed concurrently with it; and it was from this later development of the style that the various Transalpine versions of it were derived, and not from the earlier phases, the Tre-cento and earlier part of the Quatro-cento.

These Transalpine offshoots stand at different distances behind the parent style in Classic beauty as well as in consistency and truth, from the antique being less understood, and its charms less felt, in the West than in Italy. In each western country, too, what was derived from the Italian was greatly modified, not only by artistic disabilities and inferiority of resource, but by peculiar national feeling. As the same seed falling on different soil must produce different fruit, so these Renaissance styles of Europe, though they had their source in the same parent style of Italy, soon diverged very widely apart and became very different phases of art. They generally showed the same predilections as regards form and proportion, as well as decoration, which had been exhibited in the national Gothic. He entered into a full description of the complete Italian style which first appeared in tolerable perfection in the works of Brunelleschi and Alberti; and pointed to

everal edifices of the Italian peninsula which llustrate it, and to the leading architects who rought in it and by whom it was brought to erfection. Among the celebrated examples of he perfected Italian architecture he cited, a conderable difference might be observed in the mode r manner of applying the antique elements to nodern purposes, arising chiefly from local circumtances of different cities of Italy. Local disinctions had become visible at an early period of he Italian Renaissance; but now we had three listinct schools,—the Florentine, the Roman, the 'enetian,—founded respectively by Brunelleschi, Bramante, and San Michele. Mr. Huggins enered into a description of these schools, and ointed out their leading characteristics. It was o the Venetian was due the honour of having best ucceeded in adapting the antique architecture to nodern wants. The works of its founder, San lichele, at Verona, and Sansovino at Venice, hile they were among the most successful ever eared for harmony and beauty of form and proortion, and refinement and elegance of detail, xhibited the Classic style completely bent to nodern uses, and re-formed on modern ideas. 'alladio was their true disciple, and followed in he same spirit, enlightened and refined by the ractice and influence of contemporary schools nd further study of the antique.

After no great lapse of years these three schools ecame less definable. As the Florentine school rose earliest so it appears to have been earliest ost. It imbibed the spirit of the Roman, and t length lost its own distinctive character. The oman again assimilated to the Venetian, which pread throughout Lombardy and became the hief source of the succeeding style of Italy, and ainly supplied the various streams of art in ransalpine Europe; Spain, France, England, ermany, and Belgium equally following, in a anner characteristic of each particular country, n the footsteps of Venice. This style was somemes called Palladian from the fact of Palladio aving fully developed and absorbed into his own ystem the styles of his great predecessors of the hool, and from his having greatly amplified the esources of the school or sub-style by introducing nto it what would harmonise therewith of the oman school. He remarked that no style was er more bountifully aided by the sister arts of ainting and sculpture than the Italian; and fter describing the two great systems of ornaentation wrought out for it, the Arabesque and ie Pictorial, he entered into a defence of the mission of symbolism, by which this style differed om the preceding Christian styles. The æsthetic ornament replaced the symbolic of the Gothic ecause symbolism was felt to be no longer need-l; Architecture's office of teacher being superded by the printed page, on the invention of inting and diffusion of education among the eople; since which event doctrinal truths were st inculcated, and the will and the affections ould be most powerfully operated upon through e medium of literature. The modern Italian stem of architecture was carried on in tolerable rity till the time of Bernini and Borromini; and e latter half of the sixteenth century witnessed e creation of edifices of great merit, though not ual to earlier works. By the two last-named chitects, novelty being sought for its own sake, d with little regard to beauty, the style be-me corrupted; till at length, towards the latter d of the seventeenth century, it appeared quite legenerate variety of the original style. About e middle of the seventeenth century the singu-r style of ornamentation called the Louis aatorze was introduced from France, where it d been developed and perfected. It was succeded by the Louis Quinze or Rococo style, hich was little beyond a debasement of its pre-cessor. Improvement dawned in the eighteenth ntury on the manner bequeathed by Bernini d Borromini, and the style was pursued by dilei and Ivara, and by Vanvitelli, who designed Caserta Palace at Naples.

After tracing the parent style through all its ases, the author entered into a description of different branches in western and northern rope. Owing to Spain being more exclusively tholic and under the influence of the Roman rgy, it was the first country that received the lian Renaissance, which entered the peninsula the reign of Isabella, to pursue a very different arse from that it had run in Italy or was deined to run in France and England. The spirit d character of the Middle Age, which in Spain, oured by Moorish poetry and art, legend and mance, had attained to its utmost perfection, d reached its last exquisite bloom—which had nifested itself so vividly and beautifully in the preceding Romanesque and Gothic, Saracenic and Mozarabic styles—continued and survived longer in that country, embalmed in manners, ways of thinking, intellectual culture, and works of imagination and poetry, than in any other. It was to this,—to her escape from the convulsions of the Reformation, and to the enormous wealth that was poured into her lap at the close of the fifteenth century by the discovery of America, and to the direct and potent influence of the poetic art of the Moors,—were owing the extraordinary richness and beauty of the architecture of Spain, rather than to any superior aptness for architectural conception and design on the part of the Spaniards. Mr. Huggins went on to describe the style and to trace its mutations to the present time; and then proceeded to the French branch, an interesting one, and from that to the English, German, Dutch, Belgian, Scandinavian, and Russian branches; and concluded by remarking upon the folly of the present hankering after a new style, all the styles that had hitherto arisen having been the result of circumstances the like to which had not occurred in our age.

ON THE HISTORY OF ENGRAVING.*

The art of *chalcography*, or taking impressions from *copper-plate engravings*, is supposed to have been invented in Germany about 1450, and thus to be coeval with the art of printing with movable types. Some writers of high authority, however, affirm that we are indebted for the origin of this art to the ingenious Florentine sculptor, Masio Finiguerra, who discovered it accidentally.

Pure line engraving is the oldest mode of copperplate engraving. It is nothing more than drawing elegantly on metal. The design is traced upon the plate, which must be perfectly smooth and polished, with a sharp tool called a *dry point* or *etching needle;* and the strokes are cut or ploughed upon the copper with an instrument of an angular form distinguished by the name of *graver* or *burin*. In the first state of the art the lines are comparatively rude, and the value of those productions chiefly consists in the correctness of the drawing. As early specimens of line engraving, when compared with later ones, show the gradual progress of the art, and as the impressions are very rare, they are eagerly sought after and highly prized by collectors.

Like some of us, engraving wisely improved its state by a happy marriage, with the issue of Albert Durer. This immortal artist invented, about 1517, that species of engraving known by the name of *etching*, the process of which is as follows:—The plate is heated upon a stove with a charcoal fire, so that it may not be smoked: a piece of etching ground, which is a composition of virgin wax, asphaltum, Burgundy pitch, &c., incorporated by melting over a fire, and capable of resisting the action of aquafortis, rolled into the form of a ball and tied up in a little silk bag, is rubbed over the surface of the plate. The heat of the plate causes the ground to melt and come through the silk on the copper; then a small dabber made of cotton wool, tied up in a piece of taffety, is quickly dabbed all over the face of the plate while yet warm, in order to make the wax or etching ground which covers it of uniform thickness: the ground is then held over the smoke of a wax candle to blacken it, and the plate is left to cool: it is then ready to receive the design. This is traced with a black-lead pencil on a piece of thin paper, and laid with its face downwards on the etching ground covering the copper plate, and then passed through a rolling-press, which causes an impression of the outline to be transferred on the smoked ground. The design thus transferred on the etching ground is cut through with etching needles, and the strokes thereby produced are bitten or corroded into the copper with aquafortis. It was the happy union of line engraving with this discovery of Albert Durer's which, through skilful treatment, produced the masterly prints of Gerard Audran and others.

Next in point of age is the invention of engraving in *dots*, which was practised about the year 1510. The dots are effected in several ways, and are used either for the whole or certain parts of the engraving. Dots without strokes are executed with the dry point or etching needle, upon etching ground, bitten in with aquafortis, and are afterwards harmonised with the graver, by means of which instrument small dots are made. Sometimes the graver alone is used to express the flesh and the finer parts of the picture. In the print of Domenico Campagnola, about 1570, representing "St. John the Baptist holding a Cup, and looking upwards," the background is expressed by round dots, which appear to have been made with the dry point or etching needle. The outline of the figure is put in with a deeply graved stroke, finished within with dots, and the hair and the beard are expressed by strokes; whilst Agostino de Musis, pupil of Marco Antonio, expressed the flesh only in dots in several of his pictures. Though the art of copperplate engraving could now count its great masters by scores in Germany, Holland, France, and Italy, it made its way very slowly to England. As late as the year 1590 there was hardly such a thing to be found as an English copperplate engraving. Sir John Harrington, in his translation of Ariosto, published in the year 1591, informs us that he "never but once saw pictures cut in brass for any book except his own, and that book was Mr. Broughton's treatise on the Revelations."

Another important style of engraving is that which is distinguished by the appellation *mezzotinto*, invented about the year 1642. It is executed by raising a uniformly dark barb or ground on the plate by means of a toothed tool. The design is then traced upon the plate, and the bright parts are scraped off with instruments in proportion as the effect may require it. The invention of this style of engraving has commonly been ascribed to Prince Rupert. But whatever may be the doubts about his having originated this style of engraving, there can be no doubt that the honour of having first introduced it into England belongs to the Prince.

The last species of engraving we have to mention is *aquatinta*, which derives its name from its resemblance to water-colour drawing. As in etching, the design is first traced upon etching ground, and afterwards a sort of wash specially prepared for the purpose is laid on by the means of aquafortis. By this mode of engraving, which was originally invented by Le Prince, a French artist, about a century ago, drawings in Indian ink, bistre, and other washes are very successfully imitated. Such are the different styles of engraving which, as we shall hereafter see, are beautifully adapted by the skilful artist to different subjects. We shall now glance at the development of this art in the different countries in which it was practised.

Though the art of engraving in the common acceptation of the term is comparatively modern, not being older than the invention of printing in Europe, yet its progress must not be judged by its age. It grew into a giant almost in its infancy, as may be seen from the productions of the early masters in Italy, France, Germany, and Holland. To enable you to see this, as well as help you to enter into the peculiarities of style, and the distinguishing features of each school, we shall review some of the works of the most eminent masters, according to their countries, and in chronological order. As Germany is supposed to be the country where prints first made their appearance, we shall begin with it.

Of the earliest masters of Germany, viz., Michael Wholgemuth and William Pleydenwurff, who published, in 1493, the celebrated *Nuremberg Chronicle*, with woodcuts; and of Martin Schoen and Von Mechelu, who engraved on copper, I can show no specimens. Suffice it to say, that their works are more rare and curious than beautiful. Not studying from nature, and not having the advantage possessed by the Italians of being able to refer to the remains of Greek art, the early German artists are defective in drawing: their naked figures are incorrect in the outlines, meagre and emaciated, and look as if a few hearty meals of English roast beef and plum pudding would have done them good.

These were followed by the immortal Albert Durer, the inventor of etching (1471—1528), who created a new epoch in Germany both in woodcuts and in line engraving. Of his success you may judge for yourselves from the following specimens. So highly were his talents appreciated, that the Emperor Maximilian, who often visited his studio, after gazing with admiration and delight at the print of the "The Conversion of St. Eustachius," ordered that the copperplate should be filled with gold; anxious, ere its beauties should become faded, to enshrine for ever the wonderful work.

Next in rank are Lucas Cranach (1470-1533), the friend of Luther and Melancthon, who, through the influence which he exercised by his great skill in taking accurate portraits and in delineating birds and beasts, had numerous imitators; the brothers Bartel (1496-1550), and Hans Sebald Beham (1500-1555), who studied at Rome under Marc Antonio Raimondi, whose prints are deservedly held in very high estimation and greatly

* From a paper read by the Rev. D. C. Ginsburg, LL.D.

sought after by collectors, and who, together with the renowned Henry Aldegeever (1502-1565) are denominated the *little masters*, on account of their prints being generally small; and lastly, the brothers David or Daniel (born 1510), and Jerome Hopper (born 1535). These constitute the principal masters of the early German schools of engravers, to whom we may add Melchior Lorich, or Lorch (1527-1586), who engraved both on wood and copper in a bold, free, and neat style; and the exquisite etcher Jonas Umbach (1624-1700), whose works are very spirited.

Passing over the other masters, we come to the renowned James Frey (1681-1752), better known by his Italian name, Giacomo Frey, who studied in Rome, and who was the founder of a new school in Germany. Few artists have approached nearer the style of the painters from whom they engraved than he. Whilst Frey introduced into the German school the gracefulness of the Italian artists, Justus Chivellet (born 1729), who studied under the celebrated George Wilke, taught his followers the neatness of the French school. With equal success did James Philip Hachest (1737-1807) labour in the department of etching, as may be seen from the prints, which are executed with great fire and spirit. We must conclude this school with the two Mullers, father and son, of whom Germany may justly be proud. The father (1747-1830), who only engraved thirty-three plates, immortalised his name by his engraving of the Madonna della Seggiola, which is considered by many a superior print to that of the same subject by Raphael Morgheu. The son, Christian Friederick von Muller (1783-1816), who surpassed his father, engraved only sixteen plates, owing to the shortness of his career; for he fell a victim to the art he so fondly loved, when he was only thirty-three years of age. He was engaged by Rittner, a printseller of Dresden, to engrave the Madonna di San Sisto of Raffaelle, in the Dresden Gallery, and entered with heart and soul upon the execution of the work, which he finished in a manner worthy of himself and the sublime painter. But when he brought the first proof to his employer, the mercenary man shook his head, and told him that he must go over the whole plate again, and retouch it throughout, for that such delicate work would not throw off a sufficient number of impressions to answer the trade purpose. In vain did Muller remonstrate with the £. s. d. man, and he was compelled to rework the plate. At every touch he felt as if his life-blood were departing from him, and that he was sacrificing genius to gain; and by the time he completed his labour he was broken-hearted, and died on the very day on which the first proof was taken from the retouched plate. This proof impression, which he did not live to see, was suspended over the head of his bier as he lay dead; thus reminding the spectators of the similar untimely fate of the great master of the original.

We now come to *the Dutch and Flemish school*, which, though younger by nearly a century than the German, has surpassed it both in the number of artists and the handling of the graver. Passing by the oldest masters, who date from 1510 to 1550, such as Jerome Coch, Adriam Collaeret, Hans Bol, &c., of whose works the following are fair specimens, we notice Cornelius Cort, who went to Italy, resided at Venice in the house of Titian, and there engraved some of his finest works. He afterwards went to Rome, where he established a school, and executed many of the excellent works which are the delight of the judicious collector, and instructed Agostino Caracci in the masterly use of the graver. The galaxy of engravers which appears above the Dutch horizon from this time is almost innumerable.

The Italian school is almost contemporaneous with the German, or, as some will have it, is older than the German school; and in dignity of composition, in unaffected drapery, in simplicity and grace, is superior to all other schools, especially in its early age. This arises from the fact that the Italian artists had the remains of the masterpieces of ancient Greece. The superiority of the drawing of the human figure in this school is, moreover, to be ascribed to the fact that the Italians drew all their figures in skeleton, then clothed them with flesh, and lastly arrayed them in drapery. The oldest specimen of this school which I can show is a print by Andrea Montegua, who was born in 1431, and died in 1505.

SOCIETY OF BRITISH ATISTS. — The present exhibition in Suffolk-street consists of 893 paintings and drawings, and ten small pieces of sculpture, mostly by Messrs. Physick. It includes a number of very good landscapes. We shall return to it.

"RICHMOND HILL IN '62."

MR. CROPSEY, the American landscape painter, whose "Autumn on the Hudson" was the great adornment of the United States' department of the International Exhibition, sought for a corresponding view to show Summer in England, and finding it on Richmond Hill, "loved by the Muses," has painted a parallel picture of great size. He has chosen well. Every one knows Royal Richmond, the *Sheen* (from the shining river) of former time; where Edward III., Henry VII. (from whose paternal estate in Yorkshire it had its present name), and Queen Elizabeth all died; where Henry VIII. jousted; where the Queen of George II. received Jeanie Deans; where Reynolds and Gainsborough lived; and which has been sung by Pope and Thompson.

The wall of famous "Star and Garter" is on the left of the picture: beyond is Petersham, with the grounds of Ham House, where the great Duke of Argyll was born: in the centre, or rather to the right of it,—

> "Wanders the hoary Thames along
> His silver winding way!"

Though, as the time chosen is the afternoon (just before going in to that very pleasant dinner), and a rich, warm sky gives colour to the river, it becomes, rather, the "*gilded* stream" of Thompson's verse. In the distance, which is capitally painted, is seen Windsor: everywhere are the beauties with which Nature is there so affluent; and in the foreground is a group of many figures of varied classes, the costume marking the period. These figures are of large size, and very cleverly presented. We congratulate Mr. Cropsey on having produced a charming picture of a charming spot, the first view of which ever leaves with the impressionable observer,—

> "A bright remembrance ne'er to be destroyed."

The picture is now at Mr. Henry Graves's, in Pall-mall, and is to be forthwith engraved by Mr. Robert Wallis.

RAILWAY TUNNELS.

INSTITUTION OF CIVIL ENGINEERS.

AT the meeting, March 24th, Mr. Hawkshaw, president, in the chair, the first paper read was, "Description of the Lydgate and of the Buckhorn Weston Railway Tunnels," by Mr. J. G. Fraser.

It was assumed that the aggregate length of the tunnels now daily traversed by railway trains in the United Kingdom amounted to 80 miles; and supposing their cost to have been on an average 45*l.* per lineal yard, their construction must have caused the expenditure of six millions and a half sterling. Up to the present time this interesting branch of civil engineering had not been much discussed at the Institution, as the minutes of proceedings only contained accounts of a total length of about three miles, involving an outlay of about one quarter of a million sterling. Each tunnel had its own history, and its construction demanded peculiar treatment, according to the character of the strata, the springs of water, &c. If particulars of these works were transmitted to the Institution from time to time, more effectual measures might in many cases be practised, with advantage to public economy.

The tunnels forming the subject of this communication were both executed under the immediate superintendence of the author, as resident engineer for Messrs. Locke & Errington, the engineers-in-chief.

The Lydgate tunnel, on the Oldham branch of the London and North-Western Railway, was driven through the coal measures. A longitudinal section which accompanied the paper, prepared from actual measurements taken during the progress of the works, illustrated the geological details. Faults were common in this formation; sometimes severing it in the line of the dip, and at others in the line of the bearing. Several distortions were encountered, and at one point one-half of the tunnel was in strong shale and rock, and the other half in wet and loose shale. The total length of the tunnel was 1,332 lineal yards: of this about 1,046 yards were on a straight line, and 286 yards on a curve of 74 chains radius: its width was 25 feet at the level of the rails, with a height of 20 feet. Four permanent shafts, each 9 feet in diameter in the clear, were sunk at intervals of about 230 yards, of the respective depths of 53¼, 80, 75¾, and 53 yards. They were lined with 9-inch brickwork, or with 12 inches of masonry, except in the rock. An old colliery shaft, which had been closed for many years, was also re-opened, and a cross heading was driven from it into the tunnel, a distance of 13½ yards. When foul air was met with, a supply of fresh air was forced into the workings by means of fans, until a junction was effected between the headings. There was a considerable amount of choke-damp in the neighbourhood of the old coal workings. To overcome its effects, a bore-hole was sunk from the surface, which was lined with an iron pipe, and through this fresh air was forced into the tunnel. The sinking of the shafts was carried on in the usual manner, by excavating through soft material, and by blasting and drilling through rock. The average rate of progress was 11 lineal yards per month. After attaining a depth of 20 yards, the material was raised by engine power.

A bottom heading was driven from the faces worked from the cuttings at each end; but with these exceptions the tunnel was mined by a top heading, 6½ feet by 4½ feet, first being made for the full distance of each length. The crown was protected by larch bars and poling boards; and, after the ground was secured, it was gradually widened out to the shape of the tunnel, the same description of timbering being continued to about 10 feet above the formation level. The contract price for the excavation, including the timbering, was 4s. 6d. per cubic yard. In the construction of a tunnel, the masons, or bricklayers, should, as a rule, commence the lining as soon as possible after the ground was prepared for them by the miners. The lengths mined at each face varied according to the nature of the ground; averaging, in loose shale, 3 lineal yards; through stony shale, 5 yards; and through rock, 8 yards, or in some instances 10 yards. The prices paid to the miners ranged from 8*l.* to 18*l.* per lineal yard, one-half of the total length amounting to 12*l.*, or less.

The centres used were skeleton ribs, set about 1¼ yard apart; but at the leading ends two ribs were fixed close together. This description of centering was found to answer very well. The price allowed for setting each rib was 8s. The masonry of the side walls was of coursed rubble. The arch, for a length of 632 lineal yards was turned with fitted rubble; but, owing to the scarcity of good bedded stone, the remaining length was built of brickwork. The average quantity of masonry per lineal yard was 12½ cubic yards, and the contract price throughout was 20s. per cubic yard. The mortar was composed of Barrow stone-lime mixed with coal-ashes, in the proportion of 2 to 1, ground by heavy iron rollers, and used fresh. Its setting properties were most satisfactory. The spaces between the crown bars, called the mid-feather, were filled up with brickwork, and the bars themselves were left in where they had "sagged."

The first length of the tunnel was keyed in on the 27th of October, 1854, and the last was finished on the 21st of March, 1856,—a period of seventeen months, or equivalent to about 80 lineal yards completed per month, exclusive of the sinking of the shafts. The contract price for the tunnel was 26*l.* per lineal yard through rock, and 35*l.* 16s. per lineal yard through shale, the average price being about 30*l.* per lineal yard.

The Buckhorn Weston Tunnel, on the Salisbury and Yeovil Railway, was 739 lineal yards in length, 25 feet in extreme width, and 20 feet in height above the level of the rails. It was constructed through Kimmeridge clay, intersected with veins of loose rock. These veins acted as conduits for a large body of water, amounting to about ninety gallons per minute, which flowed in at the crown of the tunnel for nearly one-half its length. To remedy the evil effects arising from this volume of water a heading, 5 feet by 5 feet, was driven above the tunnel, and about 10 yards on the upper side of it, for a length of 200 yards. A pipe, 12 inches diameter, was laid in this heading, and the remainder of the space was filled in with loose stone. The water was thus intercepted, and conveyed away from the work. It was originally intended to execute this tunnel by means of a bottom heading, sufficiently large for ordinary waggons, from the cutting at the west end, and to sink two shafts. After the heading had been driven for a length of 200 lineal yards, it was found that the action of the atmosphere caused the sides to bulge in so much that this plan had to be abandoned. A smaller heading was then substituted, and three additional shafts had in consequence to be sunk. The shafts, which were only temporary, were 8 feet square, and were lined with timber. Their cost amounted to 1*l.* 10s. per lineal yard of tunnel.

The mining was performed in a similar way to that of the Lydgate Tunnel; a top heading being first driven from each shaft. The average price for mining and tipping was 4s. 6d. per cubic yard

and the quantity amounted to 80 cubic yards per lineal yard of tunnel. The lengths mined at each face ranged from 3½ lineal yards in heavy ground to 5 lineal yards in favourable strata. The average cost of mining was 30*l.* per lineal yard, exclusive of the shafts. The crown-bars were of larch, 18 inches diameter, and were fixed about 18 inches apart.

The centres were strongly braced, and were placed about 1½ yard apart. Each rib contained 35 cubic feet of timber, and 285 lb. of wrought iron in bolts and straps, and the cost of setting amounted to 6*s.* per lineal yard of the tunnel. As side pressure was anticipated at the commencement of the work, the first ten lengths were built with an invert, which contained 4 cubic yards of brickwork per lineal yard. Further experience showed, however, that this was not necessary. The tunnel was built throughout of brickwork, upwards of six millions of bricks being used, and the average quantity per lineal yard of tunnel was 20 cubic yards. For a length of 390 lineal yards, where the water occurred, the work was 2 feet 8 inches in thickness. The spaces behind the brickwork were filled in solid, and throughout the heavy ground three bars were left in, on an average, in each length. As there was no sharp sand in the neighbourhood, burnt clay, fine sand, and broken bricks were ground together, and mixed with Bridgwater hydraulic lime, in the proportions of 2 to 1. The result was perfectly satisfactory.

The first length of this tunnel was keyed in on the 6th of October, 1858, and the last was completed on the 17th of February, 1860;—a period of sixteen months. The total cost had amounted to 53,000*l.*, or 72*l.* per lineal yard; detailed particulars being given of the cost of the different items.

THE POLICE OF THE METROPOLIS.

It is satisfactory to observe that the Government appear to be inclined to "improve" the late "occasion" on which the shortcomings of the police were so fatally manifested. And as this is a subject which in more than one instance, previous to recent doings,—or deficiency of doings, rather,—on the part of the police, has engaged our own attention and that of our readers, the opportunity is a fair one for a few further remarks on the subject, *pro* and *con.*, as we would not wish to look exclusively to the defective aspect of the police.

In order to prevent the commission of much crime, we certainly require, amongst nearly three millions of people, and in such a wide district, a larger police force; and not in the City alone. Indeed, in the City, where the beats of the policemen are shorter, and the men are more constantly in the way, there are fewer robberies, &c., committed, than in the more neglected metropolitan districts.

The increase of the number of the detective police is a step in the right direction; and the number of the force might with much advantage be still further enlarged. But there is in this country a great jealousy of, and objection to, a secret police. It would, however, be impossible, in the present condition of society, without this aid, to discover and check a large amount of crime. Taking them on the whole, the detective police, both of the City and the metropolitan districts, are men of much intelligence, and very ably do a difficult duty. In the busy thoroughfares, in crowded assemblies, theatres, concert-rooms, auction-rooms, churches, and at railway-stations, at the chief roads by which persons arrive in and depart from the metropolis, and in hundreds of other situations, the London detective may be seen in the most varied disguises, so skilfully managed that a man's wife would often fail to recognize him. At the corners of streets; near the railway stations; on the chief points frequented by the omnibuses, these policemen may be seen, in the dress of navigators, bricklayers, countrymen, &c., in search of work: at religious meetings we have heard of them assuming the garb of clergymen; and in a much frequented roadway we have met with a well-known officer in the shabby black suit of a poor country school-master, who produced written verses of his own composition, and for which he pretended he would be glad to find a publisher: we have heard of detectives who in certain situations have sold baked potatoes, and in others where they have swept a crossing. In the waiting-rooms of the police courts, and in those of the courts of session, the detective chameleon, in varied hues, according to the circumstances, mixes with those whom business has brought there; and in this way needful information is often obtained from those connected with the parties who are in trouble. Many would feel surprise at the ability with which these officers assume a character, and the skill and perseverance with which they maintain it.

The wardrobes of the detective police departments would present a curious picture, and form a subject worthy of thought; but these secret London interiors are, we suppose, only accessible to the initiated.

Believing that as regards the discovery of crime the detective force, not only of the metropolis, but throughout the country, is most useful; nevertheless, we are of opinion that it should not be too much relied upon as a means of prevention, which is no doubt a matter to which police attention should be chiefly directed, quite independent of the detectives: the regular policeman should be much more readily found when required than he now is. In such a thoroughfare as the Caledonian-road, for instance, it has frequently happened that a policeman has not been found until after an hour's search.

In some respects, the plan formerly in use was of advantage; for, although, in the provincial towns, in the daytime, there was no regular patrol, there were numerous constables, who lived in convenient situations at a short distance from each other, who, on the payment of 1*s.*, could be called out when wanted. In the outlying metropolitan districts the police-stations are very wide apart. In order to remedy this defect, it has been suggested that small stations should be established at intermediate points.

As we have before said, the number of police in a district depends upon the amount of rate granted; and money employed in this way in suppressing or preventing crime, which the presence of policemen is sure to a certain extent to do, is well bestowed; and it is certain that even at present better arrangements might be made, particularly in the manner of changing the men, which often leaves most important neighbourhoods unprotected for an hour together. The thieves know this well, and gather in their harvest accordingly.

From time to time we hear complaints of the misconduct of some of the general police body; but remembering the large number of men who are employed in this duty, their behaviour is for the most part excellent: great care is taken, we believe, in the selection.

THE METROPOLITAN RAILWAY SCHEMES.

A report has been made to the Metropolitan Board of Works by their engineer, Mr. Bazalgette, on this subject, in which a few of the thirty-three schemes of the present session are reviewed. Of the thirty-three, already fourteen have been thrown out upon standing orders, or withdrawn; but still there remain no less than nineteen lines by means of which it is proposed to cut up the metropolis into slices, with little or no respect either to appearances or to vested interests, in the eligibility of districts for residence, or the value of property in such districts. The schemes which it is proposed to carry out above ground play havoc with whole streets: those underground destroy the sewerage and drainage,—so much so that in respect to one of the two or three reviewed in the report under notice, namely, "The Metropolitan, Tottenham, and Hampstead," Mr. Bazalgette says;—"The interference with the drainage of this district is so serious that the company should submit plans for the *re-drainage of the district* for the approval of this Board, and enter into an undertaking to defray the total cost of their constructing the new sewers, and for the supervision and other expenses, before their Bill is sanctioned." And in respect to one of the above-ground lines, the "London Railway, Victoria section," it runs through Chelsea and Brompton, knocking down streets and houses like an earthquake, only an earthquake keeps modestly underground, while the "London Railway, Victoria section," leaves its traces, or at least its viaducts and bridges, 18 and 19 feet high, as a permanent disfigurement, and a serious deterioration, of what remains.

"This railway," says the reporter, "which is not quite three miles long, and is to connect the London, Chatham, and Dover Railway, near to Victoria Station, with the West London Railway at Kensington, is about 18 feet above the general level of the surface, and passes over about thirty-two important streets and roads, the levels of most of which would be lowered, and the inclinations reduced to 1 in 30; and some of them, hereinafter mentioned, which are crossed twice by bridges close to each other and at different heights, would be rendered dark and very objectionable. The bridges would in some cases reduce the widths of the roadways, and this railway could not, in my judgment, be constructed without serious injury to the locality through which it would pass.

From Sloane square and the portion of Sloane-street near to Trinity Church and schools, there will be three lines of railway forming a triangle, one terminating at Milner-street; No. 7, running nearly parallel to No. 1, and crossing the same streets, and terminating at Smith-street; No. 6, commencing at the end of Milner terrace, and joining No. 7 at Smith-street. Dracott's-place would have two adjoining bridges: one would be 40·0 span and 19·0 high, the other would be 40·0 span and 18·0 high, and in the last case the road is proposed to be lowered 1·0. South-street would also have two bridges, being distant from each other only 50 or 60 feet; and, as in the last case, one bridge would be 18 feet high, the other 19 feet high. Cadogan street is crossed by two bridges about 100 feet apart: one is described as being 40 feet span and 18 feet high: of the other no particulars are given. Moore-street will also be crossed by two bridges about 200 feet apart: the upper part of the street is proposed to be lowered 3·0, and the lower part 3·6, and the railway will pass over it by the two bridges, each 18·0 high.

Other streets in this immediate neighbourhood are similarly situate with regard to the crossings. Green-street, from Henry-street to Milner-street, will be entirely destroyed; the railway running along the street for a considerable distance. The large extent of property within the limits of deviation would indicate that this neighbourhood might be required for station accommodation, or other purposes.

Nearly the whole of the streets and roads over which the railway will pass will have to be lowered from 1 foot to 5 feet.

The lowering of Gloucester-road would lay bare the Church-street main line of sewer, which would project above the proposed altered road about 3 inches."

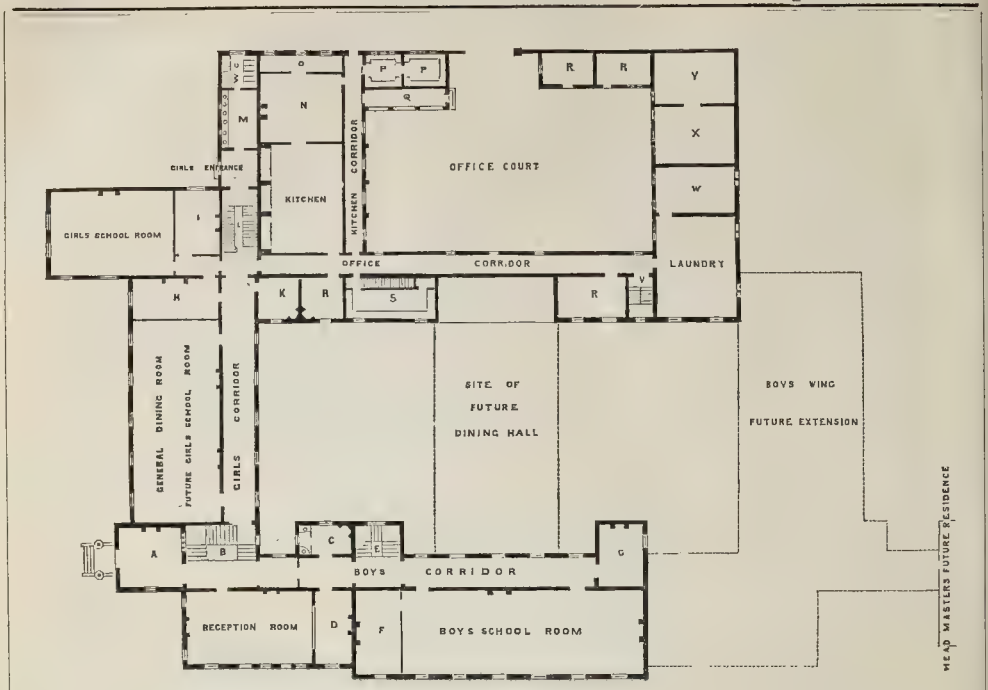
The House of Lords, we observe, have postponed for six months the second reading of the "Great Eastern Railway (New Metropolitan Railway and Branches) Bill," although an endeavour was made to save it on the ground that parts of it related to the North London line, and might be proceeded with in the present session.

THE NEW WORKHOUSE, CARLISLE.

On the day appointed to open the tenders for the new workhouse proposed to be erected for the Carlisle Union, the members of the board of guardians, assisted by Mr. Mawson, accepted the following:—

C. & J. Armstrong (Carlisle), excavations, brick, and masons' work	£5,407	0	0
Court (Carlisle), joiner's and carpenter's work	3,111	0	0
Irving & Lowthian, plumbing, &c.....	698	0	0
Ditto, for extra lead work.....	156	12	0
Johnston (Carlisle), plastering	618	0	0
Clark (Carlisle), ironwork.....	429	5	0
Hill & Sutcliffe (Bradford), slating (Westmorland slate)	681	10	0
Stephenson & Company (Carlisle), painting, &c.....	259	0	0
	£11,352	7	0

Among the tenders for the whole of the work were the following:—



Black & Milburn (Carlisle).....	£12,374	0	0
C. & J. Armstrong (ditto)	12,477	0	0
T. Nelson & Co. (ditto)	13,968	0	0

PRIZES FOR ART-WORKMANSHIP.

A committee, consisting of Messrs. John Bell, Bowler, C. Minton Campbell, H. Cole, C.B.; J. G. Crace, W. Dyce, R.A.; F. Elkington, C. D. Fortnum, G. Godwin, Peter Graham, C. Hart, W. Hawes, W. Holland, M. D. Hollins, John Hunt, Owen Jones, Marsh Nelson, T. G. Parry, F. Pellatt, Sir Thomas Phillips, Messrs. R. Redgrave, R.A.; R. Riviere, Skidmore, F. G. Stephens, Godfrey Sykes, J. Webb, and M. D. Wyatt, has been appointed by the Society of Arts to report what prizes the Society should offer for the encouragement of art-workmanship applicable to manufactures; and, upon the recommendation of that committee, the council have decided to offer prizes for the successful rendering of designs in the undermentioned processes of manufacture:—

1. Modelling in terra cotta, plaster, and wax. 2. Repoussé work in any metal. 3. Hammered work in iron, brass, or copper. 4. Carving in ivory. 5. Chasing in metal. 6. Enamel painting on metal, copper, and gold. 7. Painting on porcelain. 8. Inlays in wood (marquetry or buhl), ivory, or metal. 9. Engraving on glass; and 10. Embroidery.

Designs by artists of great reputation will be named, to be translated into the various modes of workmanship; and photographs and castings of such designs will be sold at the Society's House, at cost price, to persons desiring to be competitors. The works to be executed will be considered to be the property of the producers, who will be required to state in each case the price at which their works may be sold. The awards in each class will be of two grades. The victors will probably be crowned publicly.

THE ASYLUM FOR MERCHANT SEAMEN'S ORPHANS.—*Plan of Ground Floor.*

THE MERCHANT SEAMEN'S ORPHANS' ASYLUM, SNAREsBROOK.

THIS building has been erected from the designs of Mr. G. Somers Clarke, to accommodate 130 boys and 75 girls, and is capable of extension to hold 400 children; pending which some of the arrangements are only temporary. The Institution provides for the support and education of the children of deceased and shipwrecked mariners. We give a view and plan of the building. It is externally of red bricks, made from materials on the ground; the fronts being relieved by black Ewell lacing courses, and the window heads and other arches throughout are also of black Ewell cutters and red Ballingdon cutters. The general stonework is from the contractor's quarries at Ancaster. The external walls of courts, and the internal walls of corridors, school-rooms, dormitories, kitchen, offices, &c., are faced with pale stocks made on the ground. The south front of the building is appropriated to the boys, and the west to the girls.

On the basement is arranged a covered play-room, 84 feet by 24 feet, facing the south front, and immediately under the boys' school-room: lavatories, urinals, water-closets, and a boot and shoe room are provided adjacent, and to which easy access is obtained by a corridor 8 feet wide, communicating by a staircase with the ground-floor of this wing. Under the kitchen offices are a range of cellars and store-rooms, with a distinct staircase from the girls' wing. The washhouse and engine-house are also on this floor, and have a separate staircase by which communication is maintained with the kitchen corridor.

The ground-floor has two main entrances; the principal one in the tower, and another in the girls' wing. The former has a porch designed after the type of those common to Northern Italy: the shafts are of Devonshire marble, with bases and slips of red Mansfield stone. The canopy surmounting the porch is designed for the reception of a group, in statuary, of Charity, or Britannia protecting young children of both sexes, emblematical of the objects of the Institution. A bas-relief of a shipwreck is already executed over the lintel of the doorway. The base of the south column of this porch was laid by his late Royal Highness the Prince Consort, in June, 1861. The entrance-hall is 17 feet by 17 feet, and is divided by an open arcade of two arches resting on three-quarter Devonshire marble shafts, and is vaulted with red hexagonal coffered bricks and Ancaster stone rib mouldings. The principal staircase is 21 feet by 17 feet, the steps of which are of Portland stone, and the floor of this and the hall is laid with Minton's encaustic tiles.

The girders of the ceiling of the reception or committee room are cased with pitch pine, and an ornamental screen across the room, supported on columns, is executed in the same material: the chimney-pieces are of alabaster and marble, inlaid with Majolica tiles. The boys' school-room is 84 feet by 24 feet, the floor being constructed of two half-brick rings carried on iron girders 12 feet apart, and the spandrils fitted in with concrete: upon this the floor is laid: the walls of all the school-rooms are faced with grey stocks, and the girders cased with pitch pine. Rooms are provided in this wing for the master, under-master, and secretary.

The corridors throughout are vaulted with hexagonal coffered bricks, the spandrils being filled in with concrete, and floated with Portland cement. In the west wing is the present dining-room, 60 feet by 24 feet. This will eventually be used as a girls' school-room, when the future dining-hall is built: the room used now for their school will then become a class-room. The girls' staircase is 17 feet by 11 feet, and constructed with York steps. Water-closets and a lavatory adjoin. The officers have a private dining-room, 24 feet by 12 feet, adjoining the present general dining-room. The kitchen is 30 feet by 21 feet, lighted from the roof by large lucarnes. The other rooms on the ground floor are scullery, girls' visitors' room, mending-room, china pantry, larders, laundry, and store-rooms.

On the first floor are two dormitories for boys, 31 feet by 21 feet, and 84 feet by 24 feet, overlooked from the master's bedroom. Water-closets and a lavatory are provided for them on this floor. The corridor is fitted with lockers that serve the purpose of a linen store. The matron has a bedroom and sitting-room in the tower.

The girls have a large dormitory 60 feet by 24 feet, and a smaller one for the elder girls 36 feet by 24 feet, lavatory 17 feet by 12 feet, mistress's bedroom 17 feet by 12 feet. The arrangement of the second floor is similar to the first, with the exception of temporary sick rooms in each wing, provided with nurses' rooms and lavatories complete, till a special building as an infirmary is erected.

The tower is used to contain water-tanks for the supply of the building and also for servants' bedrooms. Gas is laid on throughout the several floors.

Messrs. Kirk & Parry were the contractors: Mr. Earp was the carver; Mr. Jane, clerk of works; Mr. Wm. Kirk, contractors' agent. The gas fittings were by Strode & Hart; the kitchen apparatus and stoves by Jeakes; and the laundry fittings by Brown & Green.

A detached chapel, built at the expense of Lady Morrison, is just on the point of completion for the sole use of the inmates of the asylum, and at a cost of between 3,000*l.* and 4,000*l.*

REIGATE LOAN EXHIBITION.

THE lovers of art, who are looking for a country excursion in the Easter week, will find much to interest them in an exhibition which is to be opened on Wednesday next, in the new Public Hall at Reigate. Pictures of the best masters, both old and of the present day,—rare china, enamels, some striking specimens of Wedgwood ware, bronzes, and various other objects, such as the public has been accustomed to see and to admire in our late Art Exhibition, will furnish material for a day's examination and enjoyment. Mrs. Hope, of Deepdene, Mrs. Forman, Mr. H. E. Gurney, Mr. John Lubbock, F.R.S., Mr. Leaf, Mr. Griffiths, Mr. Wilson Saunders, Mr. C. Davidson, Mr. Alfred Williams, Mr. Arthur Jaffray, the Rev. Jas. Beck, with other friends, both artist and amateur, have furnished important contributions to this collection; which has the additional merit of being placed in one of the prettiest and most accessible towns in Surrey.

THE ASYLUM FOR MERCHANT SEAMEN'S ORPHANS, SNARESBROOK.—Mr. G. Somers Clarke, Architect.

ON GEOMETRICAL AND OTHER SYMBOLS.

The beautiful geometrical symbol called the hexalpha, or interlacement of triangles,—

which lately appeared in the *Builder*, emblazoned on an engraved view of the Manchester Memorial of Prince Albert, has led me into a little hurried research as to the meanings attributed and attributable to this and other kindred symbols; and with your leave I would wish to record, in the *Builder*, a few of the more interesting results of these very limited researches; together with some ideas of my own on the probable original signification of such symbols.

So far as I have yet been able to discover, the materials for a disquisition of this kind are by no means abundant, although there is sufficient evidence that some of these symbols have been extensively and generally used, both in ancient and in modern times, and both amongst Eastern and Western nations, as well as amongst heathen and Christian communities. The original and true meanings embodied in them, therefore, form a subject of great interest and curiosity.

But here, at the outset, let me once for all remark, explanatively,—or, if you will, apologetically,—that, considering the close relationship in which all geometrical and other symbols used by the ancient Egyptians, Assyrians or Chaldeans, Greeks, and Hindus, or by the Buddhists, Druids, Zoroastrians, Hierophants, and all such magical religionists, must necessarily stand to magic and the oracles evoked during entrancement; we *cannot*, even in the *Builder*, altogether ignore these no doubt very wild and *outré* subjects in any serious and hopeful endeavour to get at the true and original meaning of their symbols: in fact, we must not only *know* something about both magic and the oracles, but must *say* something about them,—and cannot avoid doing so; far less about Freemasonry and Christian mysticism, with both of which such symbols have also much to do; and, as some of them are even used by architects themselves, as in the very case of the arch-masonic and arch-magical hexalpha which has initiated this inquiry;—mysticism, magic, and the oracles of entrancement, therefore,—with all of which, as can easily be shown, not only the hexalpha but many other geometrical symbols have been specially and peculiarly associated,—become, to this extent, at least, even a kind of professional subjects! In truth, entrancement, which is a definite though abnormal state, or series of states, of existence in the human body; and, as such, however mysterious for the present, still, quite capable of a sciential, if not of even a strictly physiological, and simple explanation, as I shall incidentally endeavour to show; will also, as I believe, be found to constitute the key to both magic and its symbols.

First of all I shall briefly, and without much additional comment, transcribe some of the notes I have taken from the several books into which I have dipped with the view of gleaning information; and afterwards I shall offer a few suggestions of my own on the subject.

Angles and triangles, single and variously connected, hold a distinguished place in religious symbolism. The cross itself is a duplex or even a quadrate congeries of angles; and, as we shall soon see, has been held sacred and significant in many forms of religion.

One of the simplest of angular symbols, however, was the ⋁, or ⋎, or bident, on the top of a symbolical staff, which is frequently held by female figures in the Egyptian sculptures, but which I have never seen in the hands of a male figure. The ⋁ or ⋎ of Egypt, therefore, has by some, and with seeming reason, been interpreted as a sexual symbol denotive of a feminine principle. Others, however, explain it differently; and indeed one notable result of my limited researches is that a like difference of interpretation exists in regard to many symbols; so that each interpretation must be taken *cum grano salis;* and we must look out for such of these or other interpretations as shall tend to less discordance and more harmony of meaning, if any such there were, in regard to kindred symbols, than is now very palpable amongst the various authorities consulted.

Dr. Oliver, a great authority among the Freemasons, says of the ⋎ symbol in his "History of Initiation" (p. 83, ed. 1841), while treating of what is called "the great triad of the Gentiles;" that "the mystical symbol ⋎ was also much esteemed from its allusion to the same triune God; the three distinct lines of which it is composed forming *one*, and the one is *three:* this was in effect the ineffable name of the Deity; the Tetractys of Pythagoras and the Tetragrammaton of the Jews."

The ⋎ or bident form may be seen among the ancient Egyptian sculptures, mounted thus on an equilateral triangle:—  but I have not met with any feasible interpretation of its supposed meaning, although it appears to be occasionally used by the Freemasons. Perhaps a little light may be shed upon it by the affinity which it seems to bear to another Egyptian symbol, in respect to which Dr. Barlow (see the *Builder* of March 31, 1860, p. 196), says,—"Beneath the tree [of life, the phœnix palm] are two herons, feeding from equilateral triangles,—extremely symbolical: we may sometimes see similar symbols of birds feeding from the equilateral triangle on Christian monuments: there is one such in the church of St. Maria, in Trastevere: I took a sketch of it when last in Rome."* It is probable, therefore, that whatever be the true meaning of the bident implanted on the equilateral triangle, that meaning may be also involved in the bird form feeding out of the equilateral triangle. Now just as the bident staff is always seen in the hand of a female, and never of a male, on the Egyptian monuments; so we find that female forms are often crowned with a bird-shaped head-dress, but never male forms; and, as I pointed out in one of two articles on Bird Symbols in the *Builder* [15th January, 1859], the wives of the Hindu gods, which gods and goddesses, in not a few points only, resemble the Egyptian, are described in the Brahminical books as being "in the forms of birds."

Hovering over a couched and prostrate, male, and even phallic, form, however, in one of the Egyptian sculptures [see the great French work, "Description de L'Égypte,"—division,—Antiquités, tome I] there is a bird-form (sometimes the same symbol is human-faced) which has been mistakenly, as I think, interpreted to signify the *Soul quitting* the *dead* body; whereas its face is turned *towards* a *living* body (in one case a female, though in another a male), as if about to descend upon it; so that it is much more likely to denote the descent of the divine oracular *Spirit*, invoked by or upon "him who reposes on the beautiful couch."

And here I may parenthetically remark,—although without special reference to the bident, except by way of inversion, which, however, is itself instructive,—that male phallic forms, on the Egyptian sculptures, are almost always accompanied by the flagellum or ascetic scourge, bent thus ⋀, or reversing the ⋁ or feminine form, and into the angle of which ⋀ form one hand is almost always pointed.

That the bird-form accords with the ⋁ or ⋎ as a feminine symbol, notwithstanding what I have just said, however, of the male form with the bird hovering over it; and although another male form even appears with a bird-shape behind, covering him as if it were by a robe; appears from the fact that Isis herself is frequently sculptured, as well as described, as a guardian angel standing behind and covering or overshadowing and protecting her husband-brother Osiris with wings, as the Hindu bird-goddesses, "with unclipped wings," are said to be "the protectresses of mankind;"† and that the guardian angel, or ferocher, of the Egyptians, also appears as a winged sun, sometimes symmetrical or geometrical, sometimes more freely treated, as if it were intended for a bird; and indeed occasionally as a bird itself, with the disc or sun on its head.‡

There is thus far, on the whole, at least, some degree of probability in the idea that the bident did denote a feminine principle, whatever that principle may have been; and indeed the bident may have been meant also for the yoni itself, as representative of that unknown feminine principle, seeing that phallic ideas do so unequivocally crop out in the Egyptian sculptures, as we have just observed, no less than in the Indian. I shall ultimately show quite a different *reason*, however, for the ⋁ form of such a symbol.

The St. Andrew's Cross ⤫ may be said to combine both the ⋁ or feminine form and the ⋀ or masculine form. It is also an ancient Egyptian symbol.* A large and conspicuous St. Andrew's Cross appears on the breast of a male and phallic figure engraved on plate 36th, fig. 5, of tome 3rd (Antiquités) in the French work "Description de l'Egypte." The figure is surmounted by the winged sun or Egyptian ferocher; and one hand, as usual, is raised into the angle of the agonistic scourge in its angular or ⋀ form; the whole seeming to indicate, as it were, that the *lower* part or ⋀ of the cross on the breast denotes the phallic or agonistic, masculine *soul*, or man, himself, while the upper part or ⋁ denotes his ecstatic, angelic, and oracular *spirit*, ferocher, pharaoh, fairy, peri, winged orb, or Light of the soul. Thus it appears, at all events, that the St. Andrew's Cross is not an exclusively Christian symbol. In tome i. of same series of volumes, plate 16th, there is also a figure on whose dress the St. Andrew's Cross appears.

The Tau (⊤), or, with a ring handle at the top, the Crux ansata, of ancient Egypt, is a duad of angles, and was used even by Christians, in early ages, as a form of the cross itself; as was the cross proper by the ancient Egyptians. The crux ansata is believed to have signified life, and especially the life to come, the life "in eternity," or the "eternal life;" and it has also been held to have denoted "the preserver."

From its occasional *reversal* on the sculptures; being sometimes, as in the Tombs, by the mystic Thmei, or Spirit of Truth, held by the stalk, though more generally by the ring, perhaps the ⊤ had one meaning and its reverse or ⊥ another; while the cross in what has been called its Greek form ┼ may, I think, have comprised both in one, as it were thus, ╪, in which case the lower might denote the life that now is and the upper the life to come, or the lower the Soul-life and the upper the Spirit-life, as in the St. Andrew's Cross.

---

* The equilateral triangle surrounded by rays, and surmounted by a dove, must be familiar to many of your readers, especially as a subject for stained glass windows in churches, and also on the title pages of Bibles. The Holy Spirit is here clearly indicated.

† "The gates of the realms beneath and *the guardianship of life*, are placed in the hands of the goddess; and the initiation into her mysteries is celebrated as bearing a close resemblance to a voluntary death [by entrancement] with a precarious chance of recovery..... whom, through her providence, being after a manner born again [into life, a child, as it were, of the *guardian* goddess, after this "voluntary death"], she restores to the career of a new existence."—*Apuleius.*

‡ That the winged disc, which is so frequent and prominent a symbol in Egyptian temples, not only represents a winged *sun*, but the ferocher [pharaoh?], fairy, peri, or guardian angel, and protector or saviour, and Egyptian equivalent for "the *sun* of righteousness, with healing in his *wings*," appears to be corroborated by the peculiarities of the Persian and Assyrian ferochers; thus these latter hover over the protected, sometimes fighting his battles as it were, or shooting arrows at those whom the protected is shooting at, and otherwise simulating his actions; sometimes assuming the attitude of blessing the protected, as in one case of a Persian ferocher, that of Darius, represented in Rawlinson's Herodotus, vol. iv. p. 4, as a cruciform and feathered figure, and in which the protector and the protected evidently stand in a precisely similar relation to each other with that in which a sun with rays, also represented, stands to the sacrifice on an altar before the protected, and on which the solar light is beaming. The Egyptian ferocher itself, too, in the form of a bird on the wing, and sometimes with a solar disc on its head, may be seen accompanying warriors with weapons, just as the ferocher of Assyria does, plate 51, vol. i. (Antiquités) of Description de l'Egypte, for example. In some instances, at least, the sun-crowned bird seems clearly to be an owl, such as Hazelquist describes the supposed hawk to be which is so frequent on the Egyptian monuments; in which cases the sun-crowned bird is clearly identifiable with the goddess Isis, who, like Ceres, her Eleusinian equivalent, was the "midnight sun" as well as the ever suddenly-born, yet at once mature and full-grown, Minerva, or goddess of wisdom, and oracular counsellor, of the 'Noctis Societas,' or initiated, whose mysteries were always performed by night. Doubtless the human figures with a sun-head, or "lucid round," in the centre of one of which is a "single eye" (plates 63 and 79, vol. i.), were also denotive of this nocturnal Irradiater, who turns darkness into light—night into a peculiar and internal day—the translucid day of rest in the bliss or ecstacy of entrancement, during which, to those "brought to Light," as the Freemasons say, *external darkness is no hinderance to perception*, and the initiated are "in the Light," for "there is no night *there*, and they need no candle, neither light of the sun;" their "eye" being "single" and their "whole body" being "luciform" or a "glorious body," "full of Light, as when the bright shining of a candle giveth thee light." Such is the clear vision of the highly entranced; and blindfolding, as a test of the possession of such a faculty of the oracular Spirit, was well known and practised in ancient times, and among the Jews as well as among the Gentiles: hence the Jews even attempted, mockingly, to test our Saviour in this way: "they blindfolded him, and smote him on the face; and asked him, saying, Prophecy! Who smote thee?"

* There was a singular propriety, as well as expressiveness, in the affixment of the hexalpha, or interlacement of triangles, on a monument to the Prince Consort; inasmuch as the compound initial-symbol often used during his life,—an A interlacing with a V,—was almost the hexalpha itself; and the feminine, too, here happened, curiously enough, to be the V, and the masculine the A. I am almost persuaded it was a special inspiration of what we may call symbolic wit, rather than a mere happy coincidence, which led the architect of the Manchester monument to use the right royal and distinguished hexalpha in this instance.

Dr. Barlow (see *Builder* of 24th March, 1860), while speaking of the Indian, Greek, and other uses of this symbol, says:—"The T square [Indian] symbol, with a handle attached to it, became the Crux-ansata, the symbol of eternal life among the Egyptians. The lingam-yoni symbol of life [⊥] *reversed*, becomes the famous Tau or Cross [T], which was the symbol of life among the Greeks. . . . . We often see this symbol on Etruscan ornamental borders: there are several such in the Museum of the Vatican, occurring as the Tau and as the lingam-yoni,—that is, *alternately* upright and reversed."

By turning up Rawlinson's "Herodotus," vol. iv. p. 58, it may be seen that there are Egyptian sculptures which show that the Greek Cross, as it is called, as well as the St. Andrew's, was frequently used, both amongst Asiatics and Africans, in the time of the ancient Egyptians. Sometimes it was worn as a necklace, just as it still is among Christian nations; sometimes like a star, or order, on the breast; sometimes in a series, or alternating with a circle, in ornamenting dresses. Among the Scythian warriors, dresses were thus ornamented; just as the Thibetan Grand Lama's dress, according to Huc's "Thibet," is bordered with crosses to this day. "The Vaishnavas of India," says Higgins, in his Anacalypsis, vol. i. p. 223, "have a sacred jar which they mark with crosses, and with triangles thus ✡. The vestment of the priests of Horus is covered with these crosses. This is the same as the dress of the Lama of Thibet. These are the sectarian marks of the Jains." He also notes (p. 519) that "on the ruins of Mundore may be seen various mystic emblems, as the quatre-feuille, the cross, the mystic triangle, triangle within a triangle, &c."

The Greek cross was used as a staff symbol in ancient Egypt: see plate 9, from the Bembine Table, in "Warburton's Divine Legation of Moses;" vol. ii. p. 235; which contains a mummy dressed figure, with what has been called the staff of power, having a cross proper (not the mere Tau), surmounted by the head of a dove, which, in Egypt, as among Christians, appears to have been indicative of the divine, oracular Spirit, so that Egyptian priestesses, in whom the oracle was invoked, were called doves, as those filled with the Spirit among ancient Christians also were.

The cross, indeed, as Maurice, in his "Indian Antiquities," vol. ii. p. 350, remarks, "was one of the most usual symbols among the hieroglyphics of Egypt and India." In Montfaucon [Ant. Exp., vol. ii. pl.. 49], may be seen several medals of Anubis, or Noubis, where he is called X and T, probably also mystically indicative of the St. Andrew's Cross and the Crux-ansata. It is remarkable, too, that the Tartars call the St. Andrew's Cross, or at least the Freemasonic ⨉, *lama*, from the Scythian *lamh* a hand; and thus it became the name of their high priest,—perhaps, I may suggest, from his laying on of hands in blessing. Higgins, in speaking of this, says:—"In Irish, Luam signifies the head of the Church. It is singular that the name of Lama, in the language of Tartary, thus signifies the cross; and the Bogdoi, who conquered China in 1644, always called the cross Lama. The X, or ten, was said to refer to the ten fingers of the two hands, as a perfect number."

Higgins, from his propensity to twist everything to the disadvantage of Christianity, and to the advantage of his own often erroneous theoretical ideas, is not much to be trusted, to be sure, on such a subject; but he only contributes, in this case, a little towards evidence which unquestionably proves, quite independently of him, that the cross has been an almost universal symbol, which is found recorded even in the far West, on the temple sculptures of ancient America, no less than on those of ancient India in the far East, as well as on those of ancient Egypt, between these two extreme and opposite hemispheres of the world. We may, therefore, I dare say, safely enough make use of the immense research displayed in the Anacalypsis here a little farther on this subject.

Figure 14, in Higgins's plates, is a representation of Indra crucified; his hands and feet nailed to the cross, as in Christian crucifixes; but the body, legs, and arms, are covered with, or made up of, leaves; the whole looking like a head, hands, and feet, stuck on to a leafy cruciform body, and nailed to a cross. Such crosses, he says, are to be seen in Nepaul, especially at the corners of roads and on eminences. Indra is said to have been crucified by the keepers of the Hindu Garden of Paradise for robbing it (of a flower, was it not?). The cross is put up in Thibet to point the way; and Lamas, I may here observe, are, as it were, crosses, pointing the way to salvation, according to Buddhist principles,—that is, the way to Nirvana, which is believed by the Buddhists to be the grand fountain head of all salvation; and, in fact, equivalent to the attainment of bliss, by "crucifying" the flesh, or becoming "dead in the flesh but quickened by the Spirit."* "The cross," says Higgins, "denoted, among the Egyptians, Druids, and others, eternal life: it was also the form of the phallus, and hence the sign of the procreative power, in renovation or reiterated succession of life: hence the cross came to be regarded as significant of eternally renovating life." There is, doubtless, *some* truth here; but this passage affords merely a gross and fallacious idea of that "eternal life" of the second birth, or regeneration, whether according to Hierophants or according to Christians, with which, as I shall afterwards endeavour to show, the cross and various other geometrical symbols are most significantly connected in meaning, and even in form.

So deeply impressed with the symbolical meaning of the cross do the ancient Indians appear to have been, that some of their temples are said to be built on a cruciform plan, just as Christian churches are.

There is one way by which it might be said that the cross, as a symbol, may be supposed to have originated in India, although I shall hereafter show quite a different reason for it. The devotees of Siva, the "destroyer," as he has mystically been called, marked their foreheads with a horizontal bar or line, while the devotees of Vishnu, the "preserver," marked theirs with a perpendicular line; and there were devotees of both Siva and Vishnu, whose mark was one, therefore, composed of both lines; thus completing the cross, either as the tau, T or in what is called its Greek form, ✝ as a mark upon their foreheads. It is very questionable, however, whether such an origin would account for the mysterious and extraordinary prevalence of the cross, as a symbol, throughout the whole world.

Reference to the tau or the cross as a mark on the forehead reminds me of "Ezekiel's "visions of God," in which he saw "what the ancients of the house of Israel do in the dark, every man in the chambers of his imagery," and "every man his censer in his hand, and a thick cloud of incense went up;" together with other heathen "abominations," such as the Israelites "worshipping" the outward "sun towards the east," and the "women weeping for Tammuz." Then "the Glory of the God of Israel was gone up from the cherub, whereupon he was, to the threshold of the house; and He called to the man clothed with linen, which had the writer's inkhorn by his side; and the Lord ("the Glory of the God of Israel") said unto him, Go through the midst of the city, through the midst of Jerusalem, and set *a mark* (a tau) upon the foreheads of the men that sigh and cry for all the abominations that be done in the midst thereof." These were to be *preserved* in *life*, while all the others were to be smitten and slain. This "mark," as Wilkinson and others remark, was the Egyptian cross. The tau is also believed to have been the mark which the children of Israel, then in Egypt, made upon the door-posts of their houses, by command of Moses, who was "learned in all the wisdom of the Egyptians;" that, in the destruction of the first-born of Egypt, the Angel of Death might see it and pass over them.

The notion of many Christians that the cross, and various other Christian symbols, emblematical associations, and observances, common to Buddhists, Brahmins, and Christians, must have been all borrowed from the Christians, is quite untenable. It reminds one of the acute Yankee of the far West, who had the notion that an Englishman whom he happened to meet must have borrowed his extraordinary knowledge of "the American language" from the Americans. Those who imagine that the Thibetan, Chinese, and Indian crosses, in particular, were derived from Christian sources, are quite as far astray as the Yankee; these being evidently native Buddhist and Brahminical symbols; and far more ancient, probably,—as the Egyptian and American crosses must also be,—than Christianity itself. The Jews were already in the habit of crucifying malefactors on a cross when our Saviour lived; so that even among the Jews the cross was at least then a sort of grim symbol of a sacrifice; and no doubt the Chinese also crucified malefactors then, as they still do.

In the region of ancient Chaldea,—whence emigrated Abram the Chaldean "father" of the Jews,—Semiramis, the mystical queen of Babylonia, or more properly, perhaps, the oracular Spirit, or ferocher, fairy, peri, or guardian angel, and counsellor, of the king, was threatened with crucifixion;—a mystical threat which is explicable in connexion with the fact that the Assyrian and Persian ferocher itself was occasionally cruciform, or appears on a wheeled cross, watching over the king.

Here I may remark, by the way, as to Semiramis, that, on the idea that the king had, in his own person, no oracular power, or susceptibility of entrancement, she may be regarded either as the chosen priestess, in whom the God, Baal, "appeared" or was "invoked;" or who was "visited" by the God; every night, on the elegant oracular or state bedstead, or couch, which Herodotus tells us stood, for that purpose, in the sanctum of the temple of Belus or Baal, at the top of the tower, at Babylon; or, she may have been that oracular Spirit, or ferocher itself, in the chosen priestess. We cannot here wait to fully consider the curious and heretofore confused and inexplicable historical facts as to Semiramis, sufficiently to work out the problem now started; but it is quite explicable, I am convinced, on these ideas; *e.g.*, the difficulties as to whether she were a contemporary with, or a successor to, the king, with whom, and as if his double or counterpart, she is seemingly so inextricably mixed up. I may remark, however, that there is collateral evidence of the probability that the king had, in his own person, the ferocher, pharaoh, or oracular and protective Spirit. Thus Rawlinson sees reason to maintain that Nimrod, Zoroaster, and Orion, were one and the same; that Zoroaster was a Chaldean; that both Nimrod and Zoroaster were said to have invented magic and astrology; that the Arabic astronomy calls Orion el Jabbar—the Giant—the special epithet of Nimrod, and that Gibbur is the particular Hebrew title given to the Nimrod of Scripture; that mounds of ashes in Babylonia are called Nimrod, fire-worship having been instituted by Zoroaster or Nimrod; that there were Babylonian scyths, called "Namri;" that *Orion* being *invoked Zoroaster* was *consumed* with fire and *apotheosized*; and that Nimrod was himself *worshipped as Orion* by the Semites;—from all of which premisses, I should feel inclined to conclude that kings such as Nimrod were indeed, to a certain extent, or occasionally, supposed to be twofold, since they possessed, or could, as was believed, invoke, the ferocher, god, guardian angel, or divine oracular afflatus within them; so that while Orion, or "the God," was invoked in Zoroaster or Nimrod, the body of the king was of course God-possessed, or apotheosized, and the man Zoroaster no longer for the time existed: he was "consumed by (this inward solar) fire" of Baal, the god of fire, as a mystical sacrifice on the *internal* altar of this microcosmic "sun," or winged and celestial ferocher, and guardian spirit of magical entrancement.*

In truth, entrancement, and the quickening Spirit, which is *awakened* in high entrancement, and is the natural as well as the supernatural or ultra-natural "Light" of the soul, as I shall afterwards endeavour, briefly and scientially, to show, will be found to afford us the psychological and the only key to vast regions of mystery and magic, as well as symbolism, in ancient mythology. The life of all human beings,—as the two *alternating* states of waking and sleep, in themselves, though imper-

* I have already (see on Bird and Wing Symbols, in *Builder* of 15th January, 1859), shown the error of regarding Nirvana as a state of total and irredeemable destruction or annihilation.

* If Zoroaster "or any other man" really ever "became a god," and was then and thus "no longer man," as Iamblichus has it, it might become a very natural question what had become of his nature as a *man*; and the mystical reply to this would be that it was "consumed" like a sacrifice by altar fire,—like cold by heat—like the electro-positive by the electro-negative—in and by the God in possession, who is "a consuming fire," but still a redeeming and a saving one; so that though losing his own human life *while* "the God" possessed his body, the man would "find it again" so soon as the divine afflatus or Spirit or God passed off. The ancients had very different ideas of "a God" from what the moderns have: thus Plato calls wine an evil god, and water a more sober god; and we know that when even the apostles were filled with the truly divine Spirit, they had the outward appearance of men "filled with new wine:" hence, too, there is a singular and frequent antithesis in the Bible between being "filled with the Spirit" and "filled with new wine:" thus, "be not drunk with wine wherein is excess, *but* be ye filled with the Spirit:" John the Baptist "neither drank wine nor strong drink, *but* he was filled with the Holy Ghost: Eli the priest having charged Hannah the prophetess with being drunken, she said "I have neither drunk wine nor strong drink, *but* have *poured out my soul* before the Lord,"—who "is that Spirit."

fectly, imply,—is potentially, or by constitutional possibility, twofold,—human and divine, or soul and spirit,—as Plato and many others of the ancients tell us; and as the doctrines of the Druids, the Brahmins, the Buddhists, the Egyptian hierophants, and indeed all other ancient religionists, indicate,—a fact which I have already endeavoured to show forth in the articles on "Bird and Wing Symbols" in the *Builder* of 16th October, 1858, and 15th January, 1859. The ordinary waking life of the human soul and body, and the waking life of the divine Spirit of entrancement,—during which the body is dead to the waking soul-life of the flesh, or *human* nature, as any corpse in its coffin,—far more dead to all sense and all pain, therefore, in this "voluntary death" than it is in that depraved similitude of, and imperfect substitute for, entrancement, or ecstacy, called sleep,—are two antitheses yet images of each other, or as it were sexual counterparts, just as the positive and the negative electrical states of a body are two antithetical or reversed states of the one body, with the neutral state comparable to the neutral state of sleep, as it were between them.* The awakened or "invoked" Spirit of entrancement, or ecstacy, therefore, though the counterpart, is the complete "reversal" of the ordinary waking life, and its only full and perfect "rest;" and, to "this life" of ordinary waking, it may be said to be not only sleep but *more than* sleep, or *beyond* sleep,—a deeper "repose" than the alternative and shadowy state of sleep; beyond whose fantastic dream veil it lies normally dormant: hence, however, the strange association of the magical and oracular waking Spirit of entrancement with dreams, visions, and other phenomena in which the ancient magicians, whether Chaldean, Egyptian, or Indian, ever dealt; and without a philosophical or sciential understanding of which Spirit their magical and mystical symbols cannot be explained.

The cross, in its various forms, whether Greek, Egyptian, St. Andrew's, or Maltese, is not the only form in which angles have been symbolically combined; as, indeed, the hexalpha itself, at the outset, indicated.

By far the most extensive and curious collection of angular and other geometrical symbols ever brought under notice probably, or at least that I have ever seen, are described, with diagramatic illustrations, in the "Archæologia," vol. 30, in two letters "On certain Marks discoverable on the Stones of various Buildings erected in the Middle Ages." The letters are signed "George Godwin, jun.," and were addressed, in 1843, to Sir Henry Ellis, F.R.S., the secretary, at that time, to the Society of Antiquaries. In these letters, the attention of antiquaries and archæologists appears to have been, for the first time, drawn to the general and interesting subject of masons' marks, and their connexion with the craft and mystery of Freemasonry. At the close of an article such as this, however, I cannot do justice to the importance of these and other associate symbols; and must reserve them, therefore, to the opening of another communication; which I hope I shall have your permission to lay before your readers.

John E. Dove.

* "In a paradisical state, according to the primitive Fathers, *Sleep* was *voluntary* and holy: it was a mystical and *Spiritual* Repose, before God, in which the *Soul*, elevated by contemplation, entered into and *exercised the noblest functions* of its *Angelical* part [of its higher or upper part]: Sleep was not then, as now, a mere interval of frenzy, or as in some a total insensibility."—"The Philosophical Principles of Natural and Revealed Religion" (vol. I., page 372); by Chevalier Ramsay, a French Freemason, of Scottish extraction. This, in short, just means that at one time the death-like sleep of entrancement, in which Angelical functions were exercised, as in a corpse-like yet waking life, was substituted voluntarily and *nightly*, or *in the time and place of sleep*, as a more thorough and refreshing or restorative rest; and that this Angelic or Spiritual and blissful state of rest to Soul and body, thus nightly enjoyed, turned night and its "outer darkness" into the inward "Light" of a new and peculiar day,—the waking day of rest, "dead in the flesh, but quickened by the Spirit,"—a state which was in itself, in fact, the paradisical or Elysian state of beatitude, or "the ecstatic state," or state of "divine bliss," which mankind once enjoyed, as they still can, and will yet again do, *alternately with the waking life* of Soul and body. I need scarcely point to the light which this view sheds upon the "voluntary death" of the Eleusinian and other *nocturnal* mysteries, and upon the Coffin used in Freemasonic initiations into "the Light" of the "high noon" of *night*. This, says the quasi Hermes Trismegistus, in allusion to the ecstatic state of entrancement, as the "sober watchfulness of the mind, *in the sleep of the body*," and "the true sight," and "light" of him who has "*gone out of himself*, like them that dream in sleep,"—"this is the mystery that to this day is hidden and kept secret,—*life* the *Soul*, and *Light* the *Mind*,—My Mind,—*that is*, Pimander, the great Lord of the Word, whereby I am inspired,"—in fact, "the *Spirit*" which "brings all things to remembrance"—to *Mind*—in the *Soul*.

THE STRENGTH OF WROUGHT-IRON GIRDERS.

Permit me to direct attention to the results of the formulæ for computing the strength of wrought-iron girders, as given in the *Builder*, vol. xi., pp. 646 and 677, compared with the formula obtained from Fairbairn's work on cast and wrought iron.

The formula first alluded to for a girder of I form, with four angle irons, is thus stated:—

$$W = \frac{4f \times (CN)^2 \times (2t \times AB + \frac{2}{3}s \times CN + 4a)}{l},$$

where W = safe weight in tons applied in centre.
f = force exerted by the particles in a square inch of section, at the distance of 1 inch from the neutral line.
CN = the distance of neutral line from the top of the beam; in this case taken at the centre of the depth, the flanges being equal, and the resistance to compression and extension considered equal.
t = thickness of the top flange.
AB = width of ditto.
s = thickness of vertical web.
a = area of section of one angle iron.
l = length between supports.

All the dimensions are taken in inches. The value of f is found from the equation $f \times CN = 8$ tons, which is constant. Substituting this value of f, the equation becomes,—

$$W = \frac{32 \times CN \times (2t \times AB + \frac{2}{3}s \times CN + 4a)}{l}$$

and taking the first example as given at p. 677, vol. xi., where CN = 6 inches, AB = 5 inches, l = 120 inches, $s = \frac{1}{2}$ inch, $t = \frac{1}{2}$ inch, and a = 1 square inch, $W = \frac{32 \times 6 \times (5 + 2 + 4)}{120} = 17.6$ tons, = safe weight applied in centre.

On referring to Fairbairn's treatise on cast and wrought iron, at p. 77, I find his formula stated thus:—$W = \frac{adc}{l}$, when W = breaking weight in tons, a = area of bottom flange, d = depth of beam, l = distance between supports, c = constant, whose value is taken at 75, all the dimensions being in inches.

Using the same example again we have:—$a = 4{\cdot}5$ in., $d = 12$ in., $l = 120$ in., $c = 75$.

Whence $W = \frac{4{\cdot}5 \times 12 \times 75}{120} = 33{\cdot}75$ tons; and taking the safe weight at one-fourth, we have $\frac{33{\cdot}75}{4} = 8{\cdot}44$ tons nearly, a result nearly one-half of that obtained by the first rule.

This discrepancy between the results is so marked as to require further investigation. It will be observed that the former gives 17·6 tons as the "safe weight" applied to the centre of the girder, but it is not stated what proportion of the breaking weight that is supposed to be.

On referring to the Report of the Commissioners on the Application of Iron to Railway Structures, whence the first formula is deduced, it would appear by observations made by Mr. Hodgkinson at p. 171, that, although in computing the strength of the proposed tubular bridge across the river at Conway, he considered that it might be loaded so that the metal in the top of the tube would be subjected to a compressive strain of 8 tons per square inch (that is, $f \times CN = 8$ tons); yet, he says that, "the load above seems to be the greatest that the tube ought to be made to bear." And on p. 121, of the same Report, in treating of the weakness of wrought-iron to sustain compression, he states that, if the force of compression be greater than 8 or 9 tons per inch, "a considerable change takes place in the nature of the material, and beyond about 12 or 13 tons per inch of section, the metal, in most cases, cannot be usefully employed." Hence the assumption that $f \times CN = 8$ tons employed as a constant for computing the strength of beams will give the "safe weight," is manifestly erroneous.

The liability of plate beams to lateral flexure must not be lost sight of in considering their ultimate resistance to a transverse strain; also the danger of buckling of the plates forming the upper flange, if made of too thin material; and the loss of tensile strength consequent on the use of riveted plates. Much information on these and other points may be obtained from the Report before alluded to.

With regard to loss of strength by lateral flexure, it may be useful to point to the results obtained from some experiments given in Fairbairn's work at p. 102, where three rolled-iron beams are described as being severally loaded until they gave way, in each case, by lateral bending. Applying his formula $W = \frac{adc}{l}$ to the results, we get $c = \frac{Wl}{ad}$; and this gives, in the first case, $c = 52$; in the second, $c = 57$; and in the third, $c = 73$. Again, at p. 105, a plate beam is described whose strength computed by the formula $W = \frac{75ad}{l}$ should have been equal to 29 tons, but which being loaded with 11½ tons, when further loaded gave way to lateral flexure. Assuming that it gave way with 15 tons, and computing the value of c as before, we get $c = 38{\cdot}5$. In none of these cases does the value of c reach Fairbairn's standard of $c = 75$, whence the vital importance of guarding against lateral flexure is sufficiently apparent.

E. S.

THE GREAT INCREASE OF SMALL-POX IN THE METROPOLIS.

Since the preventive means suggested by Dr. Jenner have been introduced there has been a marked decrease in the number of cases and in the amount of deaths resulting from this loathsome and fatal disease; and this difference is the more clearly to be seen in proportion to the extent to which vaccination is carried out. Although these facts are so plainly shown, we have noticed with regret that, amongst a large number of the working and poorer classes, especially the women, there is a great deal of doubt as to the efficacy of vaccination, and a fear that the practice leads to the introduction of various other diseases. We will not, however, go particularly into this matter, but would say that it is of great consequence that every means should be taken to distribute such information amongst these people as will be necessary to induce them to protect their children from the ravages of this disease. Besides this, sanitary precautions are also needful; for we find that the small-pox, like certain other disorders, is materially affected by cleanliness, drainage, and ventilation. In Bemerton-street, Islington, the small-pox has been, and still is, very prevalent; and our readers know how many of the houses in this street are situate;—let into various tenements, thirty and even forty men, women, and children, in some instances, occupying a single house, which is in no way fitted for such a purpose. Neglect of ventilation, with dirty rooms and bed and other linen, are all causes for the introduction and spread of this dangerous sickness.

In a house in Little William-street, in the same neighbourhood, the inmates have been attacked by small-pox. On asking a person living there what sort of house it was, we were told that "it was a nice pleasant house, with a *cowshed at the back*." In this instance only three families occupied the dwelling; but, on making inquiry, we found that complaints had for some time been made of unpleasant smells, and the inmates thought that the house was not wholesome. There is no doubt that this cowshed, in which four cows are kept, is not only a means of poisoning this house, but also those in the neighbourhood. In this and in some other instances we fear that the necessary and useful precautions in connexion with these unwholesome places are not carried out with sufficient care or strictness. Near Argyle-square, King's-cross, there is a very large cowyard, which is inclosed on two sides by houses thickly inhabited by poor families. There is a narrow passage here, in which at times the smell from the cowyard is shocking. Is sufficient care taken in the inspection of this and other similar places by the officers of health? The keeping of pigs adds much to this evil, and is a practice which should not be allowed in populous neighbourhoods.

When recently in the Finsbury district, we heard of cases of small-pox happening in some of these cellar-dwellings, which are there still, in defiance of the law, inhabited; and in order to prevent this and other bad consequences, these places should be inspected by those who have the charge of the public health, and families be prevented from occupying dens in which there is neither light nor air,—places in which small-pox, fevers, and such like disorders are generated.

In the case of the poor, at a time when this contagious disease is prevalent in various localities, it is very necessary that the parish authorities should afford every facility to those in their district for carrying the sick (not in street cabs) either to the proper wards in their own infirmary, or to the general hospital. Unfortunately the latter place is filled with patients; but means should be taken to get those afflicted from their

unwholesome homes, and so give them a chance of life, and prevent the further spread of the complaint. It is also of much consequence that the bodies of those who die should be removed as soon as possible; and this might be done more frequently than is now the case if the relieving officers of parishes were to afford greater facilities, and, when necessary, promptly afford assistance.

TWO LONDON RELICS.

THERE are few if any of the antiquities that are particularly associated with the metropolis of this country which are so generally known by name as *London Stone*, and the stone which rests below the seat of the chair in which so many of the English kings and queens have been crowned; and yet there are few objects of antiquity the early history of which is so uncertain. So far as we know, no inscriptions or marks are to be found on either of these remarkable stones which would give evidence of their original purpose; yet there is a traditionary interest attached to both those relics which is only to be attributed to very ancient importance. Anything more singular than the legendary history of the coronation stone could not be well conceived,—that it was a famed and "prophetic," or "fatal stone," which tradition has termed the same whereon Jacob reposed his head when he saw the vision of the ladder and the angels of God ascending and descending. It would be well to sift the history of these stones, and determine where the traditionary matter ends, and where substantial history begins; but even the latter, in connexion with these venerable antiquities, is sufficient to make them of national importance. An accidental glance a few days ago at the coronation chair, an object which has been long familiar to us, showed us signs of decay in the ornamentation with which it was once richly covered; and it would seem desirable that means should be adopted to protect it from atmospheric influence. The coronation chair for the queens consort, which is put in close contrast with the ancient chair, is a work of ugliness corresponding with the taste of the times in which it was made.

SOMETHING OF ART.

AT the Bristol School of Art, last week, Mr. Hammersley delivered one of the two final lectures of his course. He said he had protested in the previous lecture against art being taught upon a system which meant simply to amuse people, for amateurs should understand art rightly to have the full, true, and thorough pleasure which it was calculated to impart. He had shown them that amateurs were bound to study art also as a domestic question. That question was one particularly affecting ladies; because, in the act of spending money, they committed one of two things—either the perpetuation of that which was beautiful or that which was sad and deformed. On the subject of "The School: how does it accomplish its purpose?" he had spoken chiefly on elementary art. He began by repudiating picture-making, it being too frequently the case that amateurs wanted to do great things before they had accomplished small ones. It had always appeared to him that making a drawing of any given object went for nought unless the literature which lay at the base of it was perfectly understood. In drawing landscapes, for instance, what a number of questions there were lying at the threshold of the subject, without which drawing landscapes was perfectly nonsensical. With reference to his lecture on "Schools of Painting or Engraving," he said there was an immense amount of real mobility in all schools of art. It was a matter of small consequence to him whether he was criticising "The Last Judgment" of Michelangelo, or a cabbage painted by a Dutchman. Both in their way, according to the stand-point of the men who produced them, should receive their fair meed of critical examination, honest judgment, and approval. If a man was a sham, and painted an untruth, condemn it, however much it might amuse; but they must be sure that they knew they were considering what possessed pestiferous qualities. The pupils were beginning to find that there was reason for everything; and they did not see any reason why they should not reason with him on the subjects. Just imagine what that must end in: just imagine what three or four years' questionings of him, and questionings of books, with all the theories and principles and practice which they might have, would result in. The result would be that the institution, instead of being, as it was some time ago, a mere drawing school, would be an institution the pupils of which would know that there were relations between the thing put before them and nature. He was pleased to find that a great number of the young men who came in the evening—decorative painters, glass stainers, workers in stone, architects, &c.,—were consulting such authorities as were accessible to them there, and were trying to ascertain principles. Speaking of the desire amongst ladies for sketching from nature, he said that nothing could be more wholesome or rational than that wish; and as a furtherance of it a great deal of landscape had been practised in the morning classes; and he now pointed out to them what was necessary to enable them to excel in that department. He urged upon them the superiority of landscape drawing as a pastime to ornamental needlework.

A WORKING MEN'S CLUB IN SOHO.

AN article on the Working Men's Club and Institute Union, which appeared in the *Builder* of December 27th, was read by several working men employed in the building trades, and residing in the neighbourhood of Soho-square; and they being convinced that a Working Men's Club was one of their chief wants, put themselves in communication with the Rev. H. Solly, the secretary of the society. After considerable correspondence and several interviews had passed, the council of the Union invited some of the men to meet several members of their own body; and accordingly a meeting was held at the offices of the Society, 150, Strand, on the 17th ult., Mr. Russell Scott presiding on the occasion. Details were thoroughly gone into, and information was duly noted down of the premises in Soho which could be obtained for club purposes. At the close of the meeting, which was of a deeply-interesting character, Mr. Scott engaged to provide a house, rent free for the first year, and arrangements have since been made to carry the promise into effect. The proposal to start a club has been largely canvassed among the working men of the locality, and a very large body of them have undertaken to become members. A printed form, mentioning the leading features of the Club, is being circulated, to obtain the names of persons who have not yet given in their adhesion to the scheme. The club-house is in Crown-street, Soho-square, and is being cleaned and repaired by the working men who originally proposed the effort. The materials for forms, tables, chairs, &c., will be purchased, and willing hands are ready to make the requisite articles of furniture. For bagatelle, dominoes, draughts, chess, skittles, and a number of other very necessary things, about 30*l.* will be wanted; but it is hoped that this sum will be subscribed by the employers of labour and the well-to-do residents in the locality. The heartiness with which these working men have set to work is equalled only by the spirit shown by the people of Scarborough, where quite recently a club was opened, the rich contributing money, the tradespeople wood, nails, screws, and supplying goods at cost price, besides providing refreshments for the workmen, who gave their labour in fitting up such premises as probably no other than the Scarborough Club can yet boast of possessing.

THE PLASTERERS' COMPANY.

IN the year 1501 King Henry VII., by his charter, dated March 10, incorporated the Worshipful Company of Plasterers, under the title of "The Master and Wardens of the Guild or Fraternity of the Blessed Mary of Plasterers, London." Their grant of arms by Thomas Hawley, Clarencieux, is dated January 15, 1546, while a confirmation of their charter of incorporation is dated June 11, 1667, which grants them the usual privileges of a guild, a livery, a master, two wardens, and thirty-two assistants. "Let brotherly love continue," is their motto, and the registered number of privileged voters is thirty-two. Their book of ordinances is an interesting volume. The *City Press* gives the following particulars of the company. In 1586 occurred one of those 'prentice riots so famous in the old time, and five of these rebels being taken they proved to be of the Company of Plasterers. By an Act of Common Council passed in the sixth year of William and Mary, 1694, it was ordered that, "Whereas the master and Wardens of the guild or fraternity of the Blessed Mary of Plasterers, London, are, and very anciently have been, a brotherhood or guild, and for conformation or strengthening of their privileges have obtained several royal grants, whereby and by their original constitution the said fraternity or guild ought to be and consist of all persons using the trade of a plasterer within the city of London and liberties thereof,"—a fine being inflicted on those practising the art without being a member. At present the guild stands the forty-sixth on the City list.

A statute was passed in the first year of the reign of James I., 1603, c. 20, which enacted that no plasterer should exercise the "art" of a painter in the City or suburbs of London; but an apprentice was exempt from the meaning of the Act. The penalty was 5*l.*, but a proviso allowed the plasterer to use whiting, blacking, and red ochre mixed with size, without oil. This was a very important statute, for it at once cleared up the several disagreements existing in 1575, between the plasterers and the painters, the latter retaining their privileges by becoming incorporated in 1581.

Plasterers' Hall is situate a few doors westward of Philip-lane, in Addle-street, Wood-street, Cheapside, and is now occupied as a warehouse. Malcolm, who wrote in 1803, tells us that the "rooms were much ornamented with work peculiar to their profession, and the best artists belonging to it were doubtlessly employed; but the company having thought proper to admit a variety of tenants, the embellishments suffered at different periods, and probably will continue so to do, as it is still in other hands." At the present time huge cases and chests often fill up the entrance-gateway of the building in Addle-street. "One of the rooms," continues Malcolm, "was undergoing a complete alteration when I visited it; but I have rescued a curious coat of arms from oblivion, which was in the east window," and which the author of these remarks engraved in his "*Londinium Redivivum.*" According to Chamberlain, who wrote in 1771, this building was formerly Pinners' Hall; but how or from whence he obtained the information we are at a loss to conceive.

Among the plasterers we find the name of Mr. Thomas Brewer, author of "The Life of John Carpenter," and "The Life of the late Alderman Kelly," citizen and plasterer of London, and Lord Mayor 1836.

SCHOOL BUILDING NEWS.

South Lopham (*Norfolk*).—The first stone of the South Lopham Parochial Schools was laid on the 24th ultimo, by Mrs. Fitz-Herbert Bateman, the wife of the rector. The honorary architect is Mr. C. Turner, of Southampton; and the builders are Messrs. Ward & Bishop, of Diss.

Maristow (*Plymouth*). —The foundation stone of a school-room has been laid at Maristow, on the estate of Sir Massey Lopes, Bart, M.P., in memory of his eldest daughter, who died last summer. Mr. W. F. Cross, of Exeter, is the architect; and Mr. Matcham, of Plymouth, the builder.

CHURCH-BUILDING NEWS.

Warwick.—The chief stone of a new chapel for the Wesleyans, in Avon-street, Emscote, has been laid. The building will be 46 feet long by 26 feet wide, in the Lombardo-Gothic style; and when completed will be capable of accommodating 200 people and school children, numbering about 100. The principal entrance will face Avon-street; and over the doorway will be a rose window, and on either side of it a small window. Externally the edifice will be composed of red and blue bricks, with Bath stone mouldings and mullions. On each side of the chapel it is intended to place four two-light windows. The roof is to be high-pitched, of stained timber, and covered with ornamental tiles. The end of the chapel will be partitioned off with a screen for the school-room, in the middle of which the pulpit will be fixed. The cost of this structure, exclusive of the site, is to be 350*l.* Mr. Cundall, of Leamington, is the architect; and Mr. Jeffs, of Leamington, the builder. Mr. Hyde, of Milverton, presented the ground.

Shrewsbury.—The building committee of the Congregational Church, Abbey Foregate, having solicited contracts for the erection of the proposed building, the following were sent in, and that of Messrs. W. Trow & Sons, of Wednesbury, being the lowest in amount, was accepted:—Messrs. J. Cross, Shrewsbury, 4,870*l.*; J. Barnsley & Sons, Birmingham, 4,462*l.* 9*s*; Everall & Morris, Shrewsbury, 4,266*l.* 7*s.* 9*d.*; Treasure & Son, Shrewsbury, 3,478*l.* 2*s.* 7*d.*; W. Trow & Sons, Wednesbury, 3,437*l.* 8*s.*

Peterborough.—Palebrook church is about to be re-pewed. A stained-glass window has been put up. Mr. Webb was the artist employed.

Whixley (*Yorkshire*). — In Whixley church,

which has been restored by Mr. Scott, and re-opened, the blank wall under the east window has had a reredos erected from a design furnished by Mr. Scott, and executed by Mr. W. Farmer, of London. The reredos extends the whole width of the chancel, and is composed principally of alabaster and Caen stone.

Rashcliffe (*near Huddersfield*).—The foundation stone of a new church, to be called St. Stephen's, has been laid at Rashcliffe. The site was presented by the proprietor of Rashcliffe estate, in the open space just below the school-room, and plans for a Gothic church, with a spire, to accommodate 600, have been obtained.

STAINED GLASS.

Minster Church.—The repairs of this church will be completed next week. A new stained-glass window has been erected in it by the liberality of Mr. W. Rogers, of Sheriff's Court, Minster. The upper part of the window has been filled with the Dove and other emblems, and the three large openings of the lower part have the subjects of the Israelites crossing the Red Sea, the Baptism of our Lord, and Moses smiting the Rock, under Gothic canopies, with texts of Scripture above and below them. The general groundwork of the window is a geometrical pattern, in bands of colours, and scroll ornament within painted borders; and at the bottom of the window is the following inscription:—"A thank-offering to Almighty God for the restoration of this church. Anno Domini MDCCCLXIII." The window is fixed over the font, and was executed by Mr. Willement, who, a short time since, filled the east windows of the church with stained glass, through the liberality of Mr. S. Hanson, of Ramsgate.

PROVINCIAL NEWS.

Stamford.—Plans for the erection of the new "Calais of All Saints," on the site of the old buildings razed some time ago, were submitted by Mr. Richardson, jun., to a meeting of the Charity Trustees. The design of the new calais is Elizabethan in character, and it is intended that there shall be three dwellings, of one story each, for poor widows. There is to be a covered lobby leading to each room, the entrance door being from St. Peter's-street. In the gable end facing St. Peter's-hill there will be an archway with dwarfed panelled wall inserted, forming a corridor from the end calais with iron palisading in front. The gable end facing St. Peter's-street will be similar to the one looking towards the hill, with this exception, that there will not be a corridor. In each of the gables there is to be a shield for the borough arms, and over the doorway a panel to contain an inscription of the name of the calais and the date of erection. The joint building will be of Clipsham and Casterton stone, and each room will be in extent from 150 to 180 superficial feet. The extent of frontage covered will be about 70 feet. The designer of the new buildings, Mr. Richardson (who is surveyor), stated that he was ready to undertake the work for 425*l.*, and for that sum complete the habitations; excepting, however, any extra depth that might be required below 12 feet for a cesspool, the palisading, and the laying on of water from the street to the cistern. He further undertook, if the trustees thought proper, to have the work inspected by a competent person, and replace any defective portions that might be found. The sum stated was considered a reasonable one; and it was resolved "That in consideration of the various gratuitous services performed by Mr. Richardson for a series of years, the erection of the new calaises be intrusted to him instead of being contracted for, he undertaking to execute the work for 425*l.*"

Lincoln.—It has been resolved to enlarge the County Pauper Lunatic Asylum, at an estimated cost of 15,000*l.*, and advertisements for tenders have been ordered to be inserted in the county papers. This outlay of 15,000*l.* has been forced upon the magistrates by the Lunatic Commissioners, who require that all the harmless imbeciles and idiots shall be placed in asylums.

WORKMEN'S HOUSES IN CONNEXION WITH THE EDINBURGH AND GLASGOW RAILWAY.

Some time ago, the directors of the Edinburgh and Glasgow Railway Company advertised for competitive designs and plans for several hundreds of workmen's houses, to be erected at Cowlairs, in the neighbourhood of Glasgow, and offered a premium for the best design. This offer brought into the field no fewer than one hundred designs, with accompanying plans, for the inspection of the directors. The directors brought their labours to a close last week, by approving of the designs and plans of Mr. Heiton, architect, of Perth. The site of this new town is immediately to the south of the Cowlairs station. The sloping nature of the ground admits of the series of blocks of houses being built in the form of terraces or crescents; and these blocks, it may be observed, are in four different styles of architecture. Each house will have from two to six apartments, and the rents will range from 4*l.* to 12*l.* In the centre of the ground is a large square, with a water-fountain in the middle; and, to give picturesque effect to the whole, at the corners of the square are shops, with pointed slate roofs, for a baker, butcher, grocer, and dairy. The buildings also include a school-house and library in the Tudor style, together with recreation grounds for workmen and their families. The outlay by the railway company for the buildings, &c., is estimated at about 30,000*l.*; and a portion of the work is to be immediately proceeded with.

WHAT IS A BEDROOM?

Prior to Ladyday, being in search of a house, I "viewed" a large number, both in the suburbs and near the stations on some of the lines converging to the City, but was much struck with the almost general deficiency in the bedroom accommodation.

I wanted, advertised, and sought for a house, with at least five bedrooms. In many houses stated to contain the number required, I found that what were termed bedrooms were frequently literally—cupboards. Houses described as containing five bedrooms, I have often found contained only two bed-rooms proper; the others being a dressing-room, an attic, and a large cupboard, with a window in it.

Can a small room, without a fireplace, or any means of ventilation, except the window or the door, be possibly adapted for a dormitory? Is not a sleeping-room as important to health as a sitting-room? Is it right or humane to place a servant or children in nooks and corners where their strength must inevitably be undermined?

In several new houses attics without fireplaces were supposed to be fit sleeping-rooms for servants, the only way to ventilate which was by opening a skylight. It is obvious that such windows must remain sealed ones in wet, damp, and cold weather.

Well may consumptive and bronchial ailments make the ravages they do if poor human frames are stowed away in such utter disregard of sanitary principles.

Inspectors are appointed to prevent overcrowding amongst the lower classes; but in too many cases I fear that evils commensurate with overcrowding exist in the dwellings of the middling classes.

As no limit can be placed upon the number that may be lodged in our houses, is it not essential to have a clear definition of what constitutes a bedroom, and at the same time incumbent upon all builders and occupiers to recognise the definition in its integrity?

Lungs.

THE CITY COURT OF SEWERS AND STREET ARCHITECTURE.

Sir,—I beg to direct your attention to a practice which is becoming a standing rule of the City Court of Sewers, and which is likely to operate very seriously on our street architecture. Every one knows that the plinth or basement of a building is a most important part of the structure. The handsomest building will look flat and poor, and even weak, if it have not a good basement. With ordinary shops the practice is to limit the projection of the shopfront to 3 inches; but difficulties are frequently placed in the way if the projecting parts be of cement, and all projections in stone are now disallowed. The reason alleged for this distinction is, that a projecting plinth, if of stone or even of cement, might be interpreted as constituting a right of soil; whereas a wooden projection might be removed at any time. The same distinction is, curiously enough, insisted on with respect to cellar flaps; the steps of which outside the frontage must be of wood, and not of stone, in order that they should not be considered permanent. But if the wooden shop-front is never removed—and who ever heard of a shop-front being removed by order of the Court of Sewers—there is no likehood of the cement or stone projection being required to be removed; and therefore it is manifestly unfair to the more important and more architectural public buildings and first-rate shop-buildings that they should enjoy a less privilege than the less important and less valuable shops in their vicinity. Why should the public building, when ground is so valuable in the City, and where an inch or two is sometimes of the greatest consequence, be set back behind the general line of frontage, or else be required to be built without a becoming plinth or basement? The argument that the stone plinth might be construed into a right of soil is specious; for the City themselves lay down the rule that the line of frontage is regulated by that of the first floor, and that no projections of shop-front or plinth beyond that line constitute any right of soil. The principle, therefore, now being established, is both unfair and unnecessary;—unfair, as giving one description of building an advantage which is denied to another; and unnecessary, because by the rule of the Court of Sewers the stone plinth could never be recognized as implying a right of soil. No doubt, it is very important in a crowded thoroughfare, like the streets of our metropolis, that the pavement be kept as clear as possible; but every one knows that the public building presents far less obstruction to the passer by than the shop: in the former there is generally but one doorway, and the windows are all private windows; whereas in the shop the whole frontage is a shop front, the goods displayed in which frequently cause a crowd along the entire front: goods, lamps, and sun-blinds frequently obstruct the passer-by, while the lifting-shutter not unfrequently causes a more serious inconvenience. Fairness, justice, public convenience, and a regard to our metropolitan architecture, therefore, alike require that this distinction between stone and wooden projections, which is now being carried out by the Court of Sewers in the City of London, should be done away with.

Palladio.

THE ANNULAR RINGS OF TREES.

STRENGTH OF TIMBER.

The following was quoted in a late number of the *Builder*, and has been copied into other periodicals; but as the article does not explain the cause of the want of uniformity in the annular rings of trees, you will perhaps allow me to append to the article a few facts which may be of some value to a number of your readers.

"Popular Error regarding the Want of Uniformity in the Thickness of the Annular Rings of Trees.—On reference to the cross section of a newly-felled tree, it will be observed that the timber has not formed of uniform thickness round the pith of the tree. This is uniformly the case towards the base of the spruce, Scotch fir, and larch. The popular belief is, that the wood forms faster towards the side most exposed to the light and the heat of the sun's rays. Were this the case, it would prove that we have more of these from the south-east than from any other quarter. The prevailing high winds in Britain are from the north-west or south-west, and they usually blow hardest in autumn, when the young wood is most liable to be permanently bent in any given direction. This makes the top lean towards the north-east or south-east, and, by one of the many admirable compensating operations of the Great Creator, the wood at the base grows fastest on those sides, so that it may act as a natural buttress, and maintain the centre of gravity."

The above is a very old-fashioned but very unsatisfactory method of trying to explain the cause of any effect that we do not understand: in fact, it is no explanation whatever. We know that the Great Creator is the first cause of every operation in nature, but He at the same time makes secondary laws to govern many of the operations of nature; and if we examine the powers operating upon the growth of trees we will find that it is by simple mechanical action that the annular rings grow thickest on the side opposite to the direction of the prevailing winds, because when the tree is bent it forms a bow or arch, and the fibres on the convex side of the arch undergo a tensile strain, which partially closes the pores of the wood on that side, while on the concave side of the tree the fibres undergo vertical compression, which has a tendency to open the pores on that side: consequently the sap rises more freely on the concave side than on the convex, and causes a more rapid growth on that side than on the other. At the same time the wood is much softer than on the convex side. In proof of this take the Scotch fir, larch, or spruce, and examine the cross section near the base with a microscope, and it will be found that the pores on the convex side are much finer and more compact than on the concave side. Again, take a longitudinal section of the tree: cut through the centre, so as to show both the convex and concave sides, and it will be found that on the convex side the fibres are hard,

and run nearly in straight lines, whereas on the concave side they are soft, and have a wavy appearance, caused by vertical compression. Again, cut equal portions from the convex and concave sides of the same tree, opposite one another, and dry them thoroughly, and it will be found that the wood cut from the convex side has a much greater specific gravity than that from the concave side. Again, the wood cut from the convex side is much stronger, and will sustain a greater transverse strain than wood cut from the concave side of the same tree. Again, the wood cut from the convex side is more durable than that cut from the concave side of the same tree. Where Scotch fir, larch, or spruce has been used for roofing, joisting, or flooring, I have always found that the concave side, with the large fibre, got worm-eaten and quite rotten long before the convex side. These facts I discovered many years ago. A knowledge of them is of great value to parties using that kind of timber, to enable them to judge in what direction to cut up the trees for certain purposes.

Wm. Burns, C.E.

ROTHERHAM WATER BILL.

Sir,—My attention has been called to the evidence of Mr. Hawksley, C.E., on this Bill, and I know of no more likely medium than your columns through which to express my regret that a man with his alleged reputation should have made a statement before the committee of the House of Commons without any data whatever on which to base his calculation. I allude to the consumption of water in Worksop, which he puts down at 18 gallons per head daily. I regret that Worksop is not so fortunate as to possess any water-works, the inhabitants being supplied throughout the town by pumps. How, therefore, can he undertake to say the consumption of water is 18 gallons per head daily? Surely this must be one of Mr. Hawksley's theories.

I will, for Mr. Hawksley's information, state that the deodorizing works in this town answer the purpose for which they were designed most admirably; that the cost was only about 1s. 6d. per head; and that the annual cost does not exceed 50*l.* per year. Mr. Hawksley's estimate of the cost of deodorising works, as stated in his evidence, is perhaps another of his theories.

For the credit of the profession, I trust there are few men who would risk their reputation as "Mr. Hawksley the theorist" has done in his evidence on this Bill.

Robert White,
Clerk to the Worksop Local Board of Health.

THE MASONIC BUILDINGS COMPETITION.

Sir,—In reference to various letters which have appeared in the *Builder* respecting the competition now going on for the new Masonic buildings in Great Queen-street and the position and powers of the Grand Superintendent of works in relation thereto, I beg to inform you that the appointment of Grand Superintendent of Works (like other offices in Masonry) is an annual one, is in the hands of the Grand Master, and will cease and determine this year on the 29th instant; and that, for the purpose of avoiding any question or embarrassment, the Grand Master, the Earl of Zetland, has, *upon my recommendation to that effect*, declared his intention not to appoint any brother to that office until the result of the competition is known.

S. W. Daukes, G. S. W.

GIRDERS OF WROUGHT-IRON AND FIR.

Sir,—In your last issue you publish a "rule for calculating the strength of wrought-iron, flanged, and box girders:" can you assist me to calculate the strength of combined wrought-iron plate and fir girders, now so much in general use?

Tuff.

PATENTS CONNECTED WITH BUILDING.*

Improvements in Stoves for Heating and Ventilating Buildings.—*R. Zimara.* Dated April 24, 1862.—One of the principal objects of these improvements in stoves is so to construct and arrange the flues and air passages thereof, that the air in its passage to the interior of the building may be heated by pressing through a series of pipes or passages composed entirely of earthenware.

The Construction of a backed Form or Seat capable of being converted into a level Table with Seat, or a Desk, either level or sloping, or at any angle.—*A. Williams.* Dated May 5, 1862.—This invention consists of an iron standard formed of two uprights, connected at the top and bottom by horizontal iron plates, at the upper front corner of which a tenon is inserted and secured by a pivot in the mortise of the other portion of the standard, to which is attached the board to form the back of the seat. Down upon the horizontal plates before mentioned, another board is secured, and forms the seat itself. By raising the back board before mentioned, and turning it forward upon the joint formed by the mortise and tenon before referred to, the back board of the seat forms a level table; or, by being secured by a screw through the cheek of the mortise to be turned forward against the tenon, the back board will be held in any sloping position required, and will form a writing-desk.

Improvements in Apparatus for Boring Slate.—*A. Webster.* Dated June 20, 1862.—This invention relates to certain improvements in the arrangement and construction of machinery for boring slate, more particularly in the form used for roofing purposes, so that each slate may be perforated at one or more places at a single operation, the perforations being much improved in form from those produced by the usual mode, and suited to receive countersunk-headed nails, whilst the loss from breakage of slates in boring is greatly reduced or wholly avoided. This invention consists, primarily, in applying a combined punching and drilling movement to the tools operating upon the slate, and shaping these tools and their matrices so as to produce countersunk or otherwise shaped holes. And, secondly, in certain arrangements of parts and mechanism for producing the necessary compound movement of the tools from a simple and intermittent hand action.

Improvements in Cocks, Taps, and Valves. *J. Endean.* Dated April 24th, 1862.—This consists in the following arrangement of parts:—A duct, or ducts, is or are formed with a cock, tap, or valve-shank, as it is termed, having a chamber or valve-box, provided with a solid or partially solid enlargement of the said duct or ducts, of conical or conoidial form, with the requisite apertures therein, and upon this conical or conoidal part is fitted a hollow cone or conoid correspondent thereto, provided also with apertures communicating with the ducts and ways, adapted so that the steam, gas, water, or fluid will enter the valve-box or chamber, pass over or against the said hollow cone or conoid, and out at the outlet or outlets, this hollow cone or conoid being provided with a stem, spindle, or handle, passing through the chamber or valve-box aforesaid, whereby the hollow cone or conoid may be turned, so as to bring the aperture therein upon, to, or away from the apertures in the aforesaid enlargement of the duct or ducts, and thus open and shut the same as desired. The patentee arranges the apertures that the inlet shall never be closed, and hence the hollow cone or conoid shall always be kept held to its seat with an equal pressure on its centre surface.

Arches.—*E. Clark.* A communication. Dated 29th April, 1862.—This invention consists in the peculiar arrangement and construction of arches for bridges, roofs, and similar structures, more particularly when the openings to be arched are of considerable span. These arches are composed of bars or plates arranged in the form of a single or double series of triangles.

* Selected from the lists in the *Engineer*, *Mechanics' Magazine*, &c.

Books Received.

Les Grandes Usines de France. Chez Michel Levy, Freres, 2 bis, Rue Vivienne, Paris.

This interesting work by M. Turgan, to which we have before referred, is now in its third volume. The last *livraison* before us contains an elaborate account of *La Foudre* Cotton-mill, constructed by Mr. Fairbairn, and is illustrated by a number of very careful engravings of the machines employed and of the building. In this establishment, one of the finest in France, the work is done by five steam-engines of 500-horse power in the whole, and 600 or 700 persons, including children.

From the *livraison* devoted to the St. Gobain manufactory of plate-glass, we learn that the annual production of glass there has increased in ten years from 95,000 square mètres to 200,000, without including the German establishments. The cost, especially of large sizes, has been greatly lessened: thus a glass of 4 square mètres, which now costs 264 francs, cost, in 1835, 1,245 francs, and in 1805, 4,000 francs. The price of a square mètre has varied thus:—1702, 165 francs; 1791, 174 francs; 1805, 226 francs; 1835, 127 francs; and 1862, 45 francs.

Miscellanea.

Manufacture of Gas Devices for Illumination.—The extent of this trade would surprise many. As an evidence one firm, we are told, Lambert, Brothers, of Walsall, drilled for the memorable 10th of March, considerably more than 400,000 jets, which they compute would burn more than 500,000 cubic feet per hour.

Street Illuminations and Decorations.—The council of the Society of Arts have appointed a strong committee to consider and report what awards may be offered by the Society for practical suggestions to improve street illuminations and street decorations for *fêtes*. The committee will probably recommend the offer of considerable premiums for the best examples of different systems of illumination, for new modes, and, perhaps, for the best essay treating of the subject as a whole. The various specimens sent in competition would be exhibited in some convenient gardens, and thus provide a brilliant *fête*. What is mainly wanted to improve public illuminations in London, for example, is *combined action under good direction*.

Poisonous Green.—The first representation of a new piece was given three nights back at Hamburg, in which the female dancers appeared in green costumes, to represent water-nymphs. The stuff of which these costumes were made contained such a quantity of arsenic that the needlewomen who made the dresses all fell ill, and the dancers were attacked with violent symptoms of poisoning whilst on the stage.

New Pier and Railway Extension for the Isle of Wight.—The Stokes Railway and pier have been inspected by Captain Tyler, R.E., the Government inspector, with the view of opening the same for public traffic on Monday next. These undertakings were commenced by Messrs. Brassey & Ogilvie, the contractors, in 1860, under Mr. Fulton, the engineer by whom the works were designed, and have just been completed. The site of the pier is immediately opposite Ryde and Osborne.

Ordnance Survey.—The grant of 85,441*l.* has been made, without opposition, for the Survey Topographical Department. The report of the Topographical Department states that the survey of England and Wales will be finished by the end of the present month, and the complete map on the 1-inch scale will shortly be published. Since it was begun, in 1784, surveys of various parts of the United Kingdom have been made, as is well known, on a larger scale; and ultimately the following scales were decided upon as the most proper for the national survey;—For towns with more than 4,000 inhabitants, 1-500th of the linear measurement, which is 126·72 inches to a mile; for parishes in cultivated districts, 1-2500th, equivalent to 25·344 inches to a mile; for counties, 6 inches; general map of the kingdom, 1 inch to a mile.

Colouring Glass.—We learn from further inspection and the comments of our guide, that there are two methods of colouring the bubbles we see all around us. The one is by using coloured "metal" entirely; the other by "flashing"—coating white glass with a thin film of colour only. All colour *may* be "flashed:" red *must* be; because the colouring matter used would render the glass blown entirely from red "metal," opaque. So in order to be inducted into the mysteries of "flashing," we seek out a workman who is about to blow a red bubble. The process, we find, is very simple. Having gathered, upon the end of his blow-pipe, a ball of white metal, the operator, before carrying it to the "marver," gives it a twirl in a pot of red metal, and then goes on with his blowing. The two colours retain their relative positions throughout every succeeding process; as the one grows thinner and thinner, the other grows thinner and thinner; and the final result is a sheet of white glass coated with red on one side. Passing on from one workman to another, we notice that though there are bubbles of every other colour, there are no yellow ones; and, on asking the reason, we are told that all the shades of yellow are produced, not out of yellow metal, nor by flashing, but by staining white glass.—*Once a Week.*

The City and the Prince of Wales.—Mr. Benson, of Ludgate-hill, has received from the Corporation the order to manufacture the casket in which they propose to present the freedom of the City to his Royal Highness the Prince of Wales. The approved design is in the Cinque-cento style, and will be executed in gold of various tints and enamel. The front is divided into three panels, on the centre of which, on a ground of royal blue enamel, are shields bearing the arms of the Prince and Princess of Wales: above this appears the Prince's crown of State in gold, enamel, and jewels. The casket is supported by four sea-horses. The whole is surmounted by a figure of Britannia.

Royal Italian Opera.—Mr. Frederick Gye has issued a programme of more than common promise. Eight new singers will make their first appearance in England: Mdlle. Patti will reappear with Mdme. Miolan-Carvalho, and Signors Tamberlik, Mario, Ronconi, Formes, and other known names. "La Forza del Destino," by Verdi, and "Stradella," by Flotow, will be produced for the first time; and Meyerbeer's "L'Etoile du Nord" and several other operas will be revived with new scenery. With Messrs. Beverley, Grieve, and Telbin to paint this, and Mr. Costa to conduct the music, there is every reason to expect a brilliant season.

Artists' General Benevolent Institution. The forty-eighth anniversary dinner of this charity took place on Saturday night at the Freemasons' Tavern, the Earl of Carnarvon occupying the chair. The company numbered more than 200 persons, and included;—the Earl of Carnarvon; Sir C. L. Eastlake, R.A.; David Roberts, R.A.; E. M. Ward, R.A.; W. P. Frith, R.A.; H. O'Neil, R.A.; T. Creswick, R.A.; H. Weekes, R.A.; H. Farrer; J. E. Millais, R.A.; Faed, A.R.A.; Dr. O'Connor, Carl Haag, F. Leighton, G. Godwin, P. C. Hardwick, J. Gibson, F. R. Pickersgill, R.A.; G. Plucknett, J. Jennings, C. Fowler, H. W. Phillips, hon. sec.; Heaphy, Dillon Croker, Stone, Flatou, Battam, &c. The object of the institution, which was established in 1814, is to extend relief to distressed meritorious artists, whether subscribers to its funds or not. The subscriptions amounted to 744*l.*, of which 480*l.* were contributed by members of the profession.

Proposed International Schools.—M. Barbier, a French Manufacturer, placed at the disposal of the French Committee of the International Exhibition, a sum of 5,000 francs, to be given in prizes for the best essays on the means of establishing international education in Europe. An international jury, of which, among others, Mr. Richard Cobden, M. Michel Chevalier, Sir James Kay Shuttleworth, and Dr. Johnson, were members, have examined the essays, and have just published a report, which shows both the object in view and the best means of carrying it out.* It is proposed to form a European company, including distinguished men in England, France, Germany, and Italy, for the purpose of establishing a college, or rather school, in each of the four great countries of Europe. Each of these colleges would receive children of the four nations, at an early age, in equal numbers. These children, thus living together, would very quickly teach each other their respective languages; firstly, by constant practice; secondly, by classes, which would be formed in accordance with a plan as ingenious as it is new. To each boy a book would be given, which would contain those sentences most frequently used in conversation, expressed in the four different languages. The boys would be divided into groups of four, each group being formed of one boy from each nation. The English boy would read aloud a sentence in English, after which it would be read aloud in the same language by each of the other boys—the English boy acting the part of a teacher, and correcting their pronunciation. The French boy then assumes the part of a teacher, the other boys acting as pupils: the same sentence is read over in French, and corrected in the same manner; and so on for German and Italian. In this manner children would acquire a great many words; and when just beginning to understand and speak—which would require only a few weeks—they would every day be made to speak a different language during their play hours. At the end of every year the pupils would change colleges, and consequently the country they inhabited. But in all these colleges, the discipline, direction, and rules would be exactly alike; so that a boy going from one college to another, would be certain to find there the continuation of the studies he had begun.

* Published by Dulau, Soho-square.

Wood Carvers.—The Wood Carvers' Society have found a generous friend in Mr. Vaughan, of the Regent's Park, who has presented ten guineas to the general funds, and offered 20*l.* a year for two years, to pay rent, or to aid in any way the society will point out in encouraging the members to establish in their rooms a modelling and drawing class; or to lead to their attendance at the Government or other schools. The Council of the Wells Street school have offered to forward these views by making special arrangements in the classes and accommodating the time and payments to suit the wants of the carvers generally.

Restaurants for the Working Classes.—A meeting of gentlemen took place on Saturday afternoon, the 28th ult., at the Working Men's Club, Colonnade, Clare Market, for the purpose of testing the practicability of a new movement, carried out under the auspices of an "Association for the Establishment of Dining and Refreshment Rooms for Working Classes," the object of which is to provide, in the poorer districts of London, restaurants roomy, clean, and well-ventilated, where the working classes can obtain well-cooked dishes, composed of wholesome food, at the smallest possible price. In order to test the matter practically, the company sat down to a substantial dinner, which included soup or broth, meat, vegetables, and pudding (varied at pleasure by fish), and could be served to the working man for the small cost of 4½d. The plan is to be carried out under the direction of Mr. Warriner, Inspector of Cookery to the Army; and Dr. Letheby has consented to act as food examiner.

The Royal Society.—General Sabine, president of the Royal Society, held his first *conversazione* for the present season, on Saturday evening last, at Burlington House. The reception-rooms were furnished with interesting objects of science and art, among which the most attractive were Professor J. Clerk Maxwell's apparatus for viewing the mixed colours of the spectrum, and his dynamical top; Dr. B. G. Babington's morphometer, an instrument invented in Austria for the firing of mines by frictional electricity; a portion of the Mediterranean cable, from a depth of 70 fathoms, between Sardinia and Africa, incrusted with corallines, and exhibited by Mr. Fleeming Jenkin, together with curious ova and moss-like vegetation from a thousand fathoms' depth; Dr. Cobbold's preparations showing the important advantage which naturalists may find in solutions of magenta, for rendering visible minute anatomical details; Mr. Olley's chromophotographs; a model of the shield ship designed by Captain Coles; and models of the double screw gunboats constructed by Messrs. Rennie for the service of the Spanish Government at the Philippines.

Competition may be Injurious.—In the *Penny Newsman* Mr. E. Chadwick, writing on the economic results obtainable by co-operation, says: "In the service of the baker, in London, the profit in the production and distribution of bread was, under ordinary circumstances, about 12*s.* per sack of flour, making ninety-four four-pound loaves, being at that time nearly one penny three farthings per loaf. A field of supply or sale of twelve or fourteen sacks a week, according to local circumstances, may be assumed to be a 'living profit' for a respectable baker in a moderate way of business in London, to pay the rent and taxes of a 60*l.* or 80*l.* house and shop, with its bakehouse. With the same bakehouse and shop, and nearly the same fixed establishment charges, he might produce and distribute double the quantity, but from this he is generally precluded by a competitor. Upon fields of supply so occupied with double capitals other competitors break in, until the share of the field is reduced, often to the distribution of six sacks a week, and sometimes to four sacks each, by an occupation by four capitals of a field in which competition would be better maintained by two. The sanitary condition of the small bakers and competitors in towns, whether masters or journeymen, is most wretched. The bakehouses are confined, miserable, and unwholesome. The little master, to pay his rent, lets off the upper portions of the house, and crowds himself and family in the lower apartments. The small capitalist who enters into this sort of competition is too frequently a man of small understanding, and of the smallest skill in working of his material, except when, under the pressure of his necessities, his ingenuity is excited in adulterating it. The only chance of relief for the consumers will, I apprehend, be found to be in removal of the producer's necessities and temptations by creating widened fields for supply and corresponding production on a larger scale."

A large Piece of Elm Timber.—A portion of a gigantic elm tree, probably the largest in Hampshire, the property of Mr. William Warner, of Botley, has just been placed in his timber-yard at Northam. Although not half of the boll, it weighs about 18 tons, is 33 feet in length, and, on an average, more than 4 feet thick. It was until lately standing in the grounds of Winchester College. The base is of exceedingly large circumference.

Prevention of Frauds on Bankers.—Since the suggestion was made in the *Builder* to insert sums in letters of credit with perforated stamping implements, we observe that another and very simple mode of obviating fraud is in practice among the mahajuns, or native bankers of India. They merely write the half immediately after the sum drawn, *e.g.*, "Twenty-two pounds, the half of which is eleven." Thus the word twenty could not be altered into seventy without necessitating the word eleven being changed into thirty-six, which would lead to instant detection.

The Inventors' Institute.—On Monday evening a meeting of the members of the Inventors' Institute was held at the Polytechnic, Regent-street. Sir John S. Lillie occupied the chair, and the subject for consideration was "Inventions for obtaining Aërated Fresh Water from Sea Water," which was introduced by Dr. Normandy. The doctor explained the system he had introduced for the purpose of getting aërated water from sea water. The water so obtained he described as being pure, sweet, wholesome, and immediately fit for drinking.

Manchester and Salford Sanitary Association.—At the annual meeting of the members of this association a report was presented by the committee, containing a summary of the committee's proceedings during the past year. The result of careful inquiries from all available sources respecting the state of the poor was the almost unanimous opinion that none of the effects of starvation could be traced, either directly or remotely, amongst the unemployed operatives: on the contrary, the belief was expressed that the very poor were never so well cared for, never so well fed. All the evidence pointed to the same conclusion, and declared distinctly that there had been no deterioration of health or strength amongst the operatives in consequence of the cotton famine. The rate of mortality in Manchester during the past year was 32¼ per thousand of the population, and the average rate of the last five years had been 32⅔; but when it was mentioned that the average death-rate in England was 22 in 1,000, it would be seen that much still remained to be done in Manchester. It was necessary to urge forward measures of sanitary reform; and to spread amongst the poor a better knowledge of the laws of health.

The Exhibition Building.—In reply to questions put last week in the Commons, the Chancellor of the Exchequer said the Government had entered into no negotiations with Messrs. Kelk & Lucas for the purchase of the building, either with a view to remove into it a portion of the collections of the British Museum, or for any other object. The disposal of the building depended upon a concurrence of parties, and not upon Messrs. Kelk & Lucas alone, and it could only be by an agreement in views of the Commissioners of 1862, the Commissioners of 1851, and Messrs. Kelk & Lucas, that any proposal on that subject could be made. He believed that the Finance Committee of 1851, which was in some sense the organ for such purposes of the Commissioners of 1851, had entertained the question, whether it would be expedient to make a proposal to the Government to take over the building. Having heard, unofficially, what were the views of the contractors, he did not think, so far as he was able to comprehend them, that those views would be compatible with what the Government would think due to the exigencies of the public service or to the justice of the case. He believed the Commissioners of 1862 had prepared their principal report, in which they gave an account of the transactions connected with the Exhibition. That report only awaited one or two necessary formalities in order to be laid before Parliament. He was not aware that the Commissioners had come to any absolutely final conclusion upon the subject of the removal of the building within six months after the closing, but he believed that directions had been given to issue to the contractors a notice requiring them to remove the building, so as to keep alive the full rights of the Commissioners as they stood under the original agreement.

THE CONCENTRATION OF THE COURTS OF JUSTICE.—In reply to a recent question in the Commons, Sir G. Grey said it was not the intention of Government to introduce a Bill on this subject during the present session, but the matter was under their consideration. He hoped at a future day to be able to give a more definite answer.

LIGHTING A CHURCH STEEPLE.—The steeple of the Sheffield parish church was illuminated on the 10th. On three sides of the octagon, says the *Independent*, the lighting was perfect, but on the other five sides it was found impossible to carry the lights beyond some taps which have been inserted about the centre of the tower. The result was very satisfactory, however, so far as the lighting was carried. The only things wanting were larger torches to reach above the taps. The mayor is determined to make the illumination a success, and the steeple will be lighted again on the first favourable opportunity.

MONUMENTAL.—A subscription has just been opened for the erection of a monument to the Scotch novelist, John Galt, author of "The Entail," "Annals of the Parish," "Ayrshire Legatees," &c. Mr. Galt lived and died in Greenock. It is proposed that the monument shall be erected in the Greenock cemetery. The design will be entrusted to Mr. George Mossman. The monument will have a bronze profile, and two or three reliefs illustrative of Galt's works. The cost will be about 50*l.*

GEORGE STEPHENSON IN A DRAMA.—It deserves to be noted that in a piece now being acted at the Victoria Theatre, entitled "The Engineer: Perseverance;" the early career of George Stephenson (called in the drama Geordie Evanson) is to a certain extent illustrated. Geordie himself delivers a number of speeches on the value of perseverance and the value of science, and what is more is listened to attentively. Put into his mouth the paragraph, for example, which went the round of the newspapers some year or so ago, pointing out that the heat we get from coal is due to the bottled-up sunbeams of centuries ago, gets a hearty round of applause. Some of the scenery and effects are very good, and the whole get-up of the piece highly creditable.

BRIGHTON PUBLIC BATH ASSOCIATION.—A public meeting has been held in Brighton to consider the desirability of establishing baths and washhouses; and a Brighton Public Bath Association has already been formed, "for the purpose of establishing hot-air, and hot and cold sea and fresh water baths in Brighton, at a scale of charges which will place the luxury of the bath within the reach of all classes." The undertaking is backed by several residents of influence; and the working classes are taking up the shares, of which it is intended there should be 3,000, at 1*l.* each. The local *Herald* states that a favourable site, in a central position, has been secured. Baths and wash-houses are much needed by the working classes of Brighton, and it is to be hoped it will not be long before some are established either by the town council or an association established for the purpose.

ACCIDENTS.—While a number of plasterers and their labourers, nine in all, were at work in a room on the third story of the cotton mill of a co-operative company, now nearly ready for the reception of machinery at Woodnook, Accrington, they suddenly heard a loud crash, and the floor on which they were standing, together with those above and below them, fell in; and they, together with the *débris*, were precipitated a depth of 50 feet. Six of the unfortunate men were completely buried in the ruins. Two others were partially immured while the third escaped altogether.——At Worthing, a new house that was being erected in Eastreet has fallen while the workmen employed in building it were all on the premises; but, fortunately, every one escaped without sustaining any injuries of a serious nature. The house had been about a month in erection, and was run up as far as the roof all round, with the exception of a little piece in front, which would have been completed on that afternoon; and the workmen were pursuing their labour unconscious of the slightest danger, when suddenly a part of the south-east corner gave in, and the whole of the south as well as great portions of the east and west walls, fell into the building, dragging down scaffold-poles, beams, planks, tools, and ladders, into a confused heap of *débris*. The house was being erected by Mr. Herbert, under a contract with Mr. Ward, builder, and on him the loss of labour and material will fall. Why *did* it fall?

AMERICAN SCULPTURE.—The Richmond papers record the death of Alexander Galt, the young Virginian sculptor, who was the first Southerner that has established a reputation in statuary. His full length figure of Jefferson, at the University of Virginia, won for him honour. His latest work was a bas-relief in plaster of Stonewall Jackson, which is in the possession of the Hon. A. R. Boteler. Mr. Galt died of the small-pox.

NOTTINGHAM SCHOOL OF ART.—On the 17th ultimo, the tenders for the proposed School of Art were received by Mr. Bakewell, the architect, and opened in the presence of the secretary. On the 24th they were presented to the committee, and reported upon by the architect. After some little discussion the tender of Mr. Acton was unanimously adopted. We understand that with the exception of three the tenders run very close together.

AN ADDRESS WOVEN IN SILK TO THE PRINCESS OF WALES.—The town-council of Coventry have given instructions to a committee to procure designs for an address to the Princess of Wales, to be woven in silk, at a cost probably of 100*l.*, exclusive of the expense of a loom, which would itself amount to 150*l.* or 200*l.*; but the manufacturer of the Godiva ribbon for the International Exhibition has offered the use of his loom, otherwise one would require to be built for the purpose.

NEW RAILWAY BREAK.—Mr. John Clark, of Glasgow, has patented a safety break, which is well spoken of by the Scottish papers, according to which it appears that while the speed of a train of five carriages on an incline was about forty miles per hour, the stoppage was effected in less than 300 yards; and that on the same incline, at less speed, the train was brought to a stop in about 150 yards; and on the level, at a speed of thirty miles per hour, a stop was made in about 100 yards.

RAILWAY MAPS.—The lines proposed throughout England, Scotland, and Ireland, by the Bills of Session, 1863, as well as all those already constructed and in course of construction, are shown on a series of three coloured maps,—one for each country, and brought up to 28th February,—which have just been published by Messrs. Day & Son, lithographers to the Queen. The interlacement of the country, and especially of England, by these iron arteries and veins, is an interesting subject of contemplation. The Continent and America are getting well covered; but few such sights present themselves over all the world as that of the railway maps of England. Of course in those now published by Messrs. Day, the network becomes thicker than ever.

THE BRIGHTON DRAINAGE QUESTION.—At a meeting recently held in Rottingdean, a resolution was passed to the effect that the proposed scheme of drainage for the parishes of Brighton and Hove under the turnpike road to an outfall in Saltdean, in the parish of Rottingdean, would be highly prejudicial to the health and prosperity of the inhabitants of Rottingdean; the cliffe above Saltdean being a favourite resort of the inhabitants and visitors of Rottingdean, and the bay at Saltdean much frequented by bathers; and that the town council of Brighton should therefore be made acquainted with the strong feeling of opposition to this proposed scheme of drainage, which prevails amongst the inhabitants and holders of property both there and in its vicinity.

NEW BRIDGE AT EBCHESTER.—A new bridge over the Derwent has been opened at the village of Ebchester, about two miles to the east of Shotley Bridge. The bridge is built entirely of freestone, from one of the Greenwich Hospital quarries, the use of which has been given gratuitously, in addition to a subscription of 200 guineas. The freestone is undressed, and the structure has been formed of three semi-circular arches. The span of the centre arch is 34 feet; and that of the other two 28 feet each. The arches are supported by four piers, about 4½ feet broad, which rest upon a foundation of concrete. From low water-mark to the keystone of the centre arch is 20 feet; and to the keystone of each of the other two is 17 feet 6 inches. The architect was Mr. J. Smith, of Medomsley; and the contract for the building work was given to Messrs. Lyness & Ayton, of Crook. The work in its progress has undergone the supervision of some of the magistrates; and also of Mr. Joseph Howison, surveyor for the county of Northumberland; and Mr. William Crozier, surveyor for the county of Durham. The contract price, including the approaches to the bridge, amounts to about 700*l.*

ALBERT MEMORIAL.—The Butchers' Charitable Institution are now erecting at Walham Green Almshouses in memory of the late Prince Consort. Last week the foundation stone was laid by Mr. Francis Healey, J. P. The architect is Mr. Henry M'Calla, and the builder Mr. Avery.

AGE OF THE YEW TREE.—But it was also the most important of our indigenous evergreen trees; and evergreen foliage is a type of immortality. This characteristic of the yew would not be overlooked by those who, having no other books, read the book of Nature the more studiously. Moreover, it is by very far the longest lived of all our trees. Some live still which have lived already 1,800 years. Why, a tree of that age—and they probably abounded in the primæval forests of the chalk downs, where they are still to be seen in every hedge-row—a tree of that age in British times must have dated back from near the Flood. To British minds such trees must have seemed deathless. The poetic half-barbarian mind would see in a tree which lived on age after age, keeping its foliage ever green, the fittest symbol, below the stars, of immortality.—*The Churchman's Family Magazine.*

A GLIMPSE OF LIGHT AS TO ANCIENT AMERICA.—Some glass beads of unquestioned Phœnician manufacture are reported to have been found at Beverley, Canada, in an "ancient ossuary of the copper age." May it not turn out, after all, that what Plato tells us of was true, that the Atlantic was once "navigable," or had been navigated, ages before his time, when warlike tribes from beyond the ocean invaded and overran all Lybia and other countries in what we call "the old world?" This would go far to explain the similarity of the ancient American temples and teacolis to ancient Egyptian, Babylonian, and other structures. And, by the way, the chronologies of the Egyptian priests in Plato's time, in which tens of thousands of years were treated as a mere bagatelle, and the Greeks were regarded as conceited upstarts of recent times, are likely now to be received a little more respectfully than heretofore, considering our enlarged ideas of the antiquity of man: perhaps, too, Chinese and Indian chronologies will be reconsidered, and a little less contemptuously treated than they have been by our own conceited but improving generation.

TENDERS.

For building Barrington Hall, near Hatfield Broad Oak, Essex, for Mr. G. A. Lowndes. Mr. Edward Browning, architect, Stamford. The estate to find materials of the value of 4,000*l.*:—

Brown	£11,583 0 0

THE *Art Journal* for August, speaking of Benson's watches in the Exhibition, says:—"We have selected for engraving three of the watch-cases, of which a large variety is exhibited by Mr. Benson, Ludgate-hill, in the large and prominent erection that contains his monster clock. To this department of art-manufacture Mr. Benson has paid especial attention." Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, from the plainest to the highest quality of which the art is at present capable, and adapted to all climates. Benson's Illustrated Pamphlet on Watches (free by post for two stamps) contains a short history of watchmading, with descriptions and prices. It acts as a guide in the purchase of a watch, and enables those who live in Scotland, Ireland, Wales, the colonies, India, or any part of the world, to select a watch, and have it sent free and safe by post.—J. W. Benson, Prize Medallist, 33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

ADVERTISEMENTS.

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an Abstract of the New Building Act for regulating the Construction of Buildings. Illustrated and exemplified by Steel Engravings and numerous Woodcuts. Royal 8vo price 8s. neatly bound.

London: published by T. KELLY, Paternoster row; SIMPKIN and MARSHALL, and may be had of all Booksellers.

Of whom may be had, New Editions in Quarto, of the following Practical Architectural Works:—

PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET-MAKING, Revised by GEO. GOOD; being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. In Parts at 3s. or in boards, 30s; containing upwards of 120 Steel Plates, and numerous Woodcut Diagrams.

PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING (revised by TREDGOLD), both plain and ornamental; containing a new and complete Analysis of Lines for Stone Cutting, for the Use of Workmen; the Application of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c.; and a descr ption of the various materials employed. Ten Parts at 3s. or in boards, 30s; containing upwards of Ninety Steel Plates and Numerous Woodcuts.

TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE; containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s.; or in boards, 36s.

DESIGNS for COTTAGE and VILLA ARCHITECTURE; containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By H. HAKEWILL, Architect. Beautifully engraved on steel, with Direction for Building, and the estimated Cost of each Edifice. Twelve parts at 3s.; or in boards, 30s.

DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other Buildings for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts, at 3s. or 30s. boards.

THE HOUSE DECORATOR and PAINTER'S GUIDE: containing a series of Designs for Decorating Apartments, with taste, and executed in the various styles of Architecture. By DAVID and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts; or in boards, 30s.

THE HOUSE PAINTER, or DECORATOR'S COMPANION: containing a complete Treatise on the Art of Painting, Graining, and Marbling; including the Origin of Colours, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. HIGGINS, Esq. Accompanied by Original Specimens of Hand Brush Graining and Marbling. Ten Parts, at 3s.; or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every Department of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HERBERT, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1825, of the Encyclopædia. The Inventions and discoveries recently made have received the sedulous attention of the Editor; for, as the value of each edition of new articles, and care in the revisals of old ones, this work has now become systematically enriched; so that it may be regarded as fully and faithfully expressing "the existing state of Engineering, Mechanism, adapted to the wants of Practical Men." In two large volumes, cloth lettered, price 20s.

A. G. NEWENHAM (Pupil of G. G. Scott, Esq. R.A.) PREPARES Sets of Competition Designs, and every description of Architectural and Artistic Drawing, with punctuality and despatch, and on reasonable terms. Sets outlined in a superior manner (and coloured by Assistants), with punctuality and despatch, and on reasonable terms. Offices, 21, Parliament street, Westminster, S.W.

Competition and every description of Architectural, Working, and Detail Drawings prepared.

TO PARENTS AND GUARDIANS.
A CIVIL ENGINEER and SURVEYOR, in extensive practice, has a VACANCY for an ARTICLED PUPIL.—Communications addressed C. E. 12a, Bridge-street, West minster.

CLERK of WORKS.—WANTED, by the Guardians of the Poor of the Parish of Saint Leonard, Shoreditch, Middlesex, a Thoroughly-practical and Experienced CLERK of WORKS, to superintend, under the direction of the Architect and Surveyor, Mr. WM. LEE, the erection of the new Workhouse for the said Parish. Salary £1 per week. Candidates must attend personally, with written applications, stating their age and the works they have been engaged on, and also testimonials as to ability and character, at the Workhouse, Kingsland road, London, N.E., on WEDNESDAY, the 8th of APRIL 1863, at SIX o'clock in the evening precisely.
By order of the Board. WM. NIGHTINGALE, Clerk.
Clerk's Office, Workhouse, 25th March, 1863.

DRAUGHTSMAN.—WANTED, the OCCASIONAL SERVICES of a DRAUGHTSMAN, acquainted with the Construction of Warehouses. He would generally be required for some days together. State terms per hour.—Address, H. F. Office of "The Builder."

PARISH of ST. JOHN, HAMPSTEAD.
Notice is hereby given, that at the Vestry to be held at Hampstead Workhouse on Easter Tuesday, the 7th day of APRIL next, at HALF PAST SEVEN o'clock in the evening, the Vestry will proceed to appoint a competent person, whose age shall not be less than twenty-five nor more than forty, to act as the Surveyor and Inspector of Nuisances for this parish in the general duties of his office. Such assistant officer will be required to reside in this parish, and to devote his whole time to the duties of the office under the direction of the surveyor; he must also be a good draughtsman, be practically acquainted with building, with house drainage and sewerage works, and will also be competent to take estimates. The salary will be £2. 2s. per week.—Further information can be obtained at the Office of the Surveyor of the Vestry, at New End, Hampstead. Applications for the office in the handwriting of the candidates, with testimonials, must be sent or delivered to me at or before SEVEN o'clock in the evening of the 7th of APRIL next, and the candidates must attend personally at the time fixed for the meeting.—By order,
THOMAS TOLLER, Vestry Clerk.
Vestry Offices, Workhouse, Hampstead, March 28, 1863.

SURVEYOR WANTED, NORTHLEACH HIGHWAY DISTRICT.—WANTED, by the Highway Board for the North each Highway District, constituted under the Act 5 & 6 Vict. c. 61, and which comprises the Parishes of Aldsworth, Aston Barton, Barrington Little, Chedworth, Compton Abdale, Coln Rogers, Colne Saint Dennis, Dowdeswell, Eastington, Farmington, Hampnett, Hazleton, Northleach, Salperton, Sevenhampton, Sherborne, Shipton Oliffe, Shipton Sollars, Stowell, Turkdean, Whittington, Windrush, Withington, Winson, and Yanworth; all in the County of Gloucester, a DISTRICT SURVEYOR. The Highway District comprises about 171 miles of parish roads. The duties of the District Surveyor will be to act as the agent of the Board in maintaining, in good repair the highways in such district, and to carry into effect all the works, and to perform all the duties, as the Act required, or to be performed by the Board, and to conform to the directions of the Board in the execution of his duties. His first duty will be to make a survey of the parish roads comprised in the said several parishes, and to make an estimate of the expenses likely to be incurred during the current year, for maintaining and keeping in repair such roads, and when such estimate shall have been approved, or modified by the Board, to deliver a copy of such estimate to the Waywarden of each parish. The Surveyor, in the execution of his duties, will not be liable to the payment of any turnpike toll. Applications for the office to be made, under cover, to the undersigned, addressed to the "Northleach Highway Board," stating which of the said districts the amount of salary required, on or before WEDNESDAY next, on which day the Board will sit at half-past THREE o'clock in the afternoon, at the Northleach Union Workhouse, in order to receive and determine upon such applications.—By order of the Board
Northleach, April 1st, 1863. HENRY STILES, Clerk.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator — for the admission of Pure Air

THROUGH THE EXTERNAL WALL.

With single pulley, from 6s each; with leading pulley, from 8s 6d. These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London; and of all respectable Ironmongers, Builders, &c.

NOTICE.—BUILDERS and DECORATORS will find superior and unparalleled advantages in MEAD'S PATENT STAINS, comprising the rich oak, satin wood, walnut, Spanish mahogany, &c; they far surpass anything ever seen, and entirely supersede paint for the interior woodwork of dwelling-houses, being admirably adapted for the castle, the magnificent hall, the library, the drawing-room, and the miniature cottage; also for church work, merchants' and bankers' offices, railway stations, schools, &c. &c.—To be had of T. J. HUGGS, 2, Brunswick-place, City-road, N.; and at the Works, Abridge, Essex. Price 8s. per gallon. Post orders will have best attention. The above merits special notice. The choice and beautiful effect given to work finished with them, and great saving in time and expense, are highly appreciated by the most experienced workmen.

ELLIOTT, BROTHERS, Opticians to the Government, 30 Strand, beg to give notice that they have been compelled to REMOVE temporarily to 47, CHARING CROSS, their late premises being suddenly required by the Charing Cross Railway Company.

BANKERS.—Messrs. Joseph Samuel Lescher, esq.
SECRETARY—George William Lovell.
ASSISTANT SECRETARY—John J. Broomfield.
Insurances against Loss by Fire are effected by the Phœnix Company upon every description of Property, in every part of the world, on the most favourable terms.
The promptitude and liberality with which its engagements have always met by this Company are well known; and the long experience of its relations with the public may be estimated from the fact that since its establishment it has paid more than Eight Millions Sterling in discharge of Claims for Losses by Fire.
Insurances with this Company expiring at Lady-Day may be renewed within fifteen days thereafter, or they will become void.
Receipts are now ready at the principal Offices, Lombard-street, Charing-cross, and with the respective Agents throughout the United Kingdom.

FERGUSON, sole proprietor of the above Pits, is now prepared to deliver any quantity of the very finest descriptions of GRAVEL, specially adapted for road making, garden paths, concrete, &c.—Orders received at the Offices, Nos. 11, 12, 13, Wharfe, Northside, Paddington Basin, W.

EXTENSIVE MANUFACTURING PREMISES, Whitechapel. TO BE LET or SOLD, together or separately, the extensive and important range of PREMISES, recently occupied as the Whitechapel Distillery, with land adjoining if required. The buildings, many of which are of great extent, are most substantially erected, principally in 1845, and are very conveniently arranged for almost any manufacturing purpose. There are three distinct gateway entrances, and the buildings on all sides are surrounded with paved yards. The total area is about three acres, exclusive of six acres of accommodation land, which may be had if required. There is an Artesian well which affords a constant and unlimited supply of pure water.—Further particulars, and cards to view, may be had of Messrs TENNANT & DARLEY, Solicitors, Raymond's buildings, Gray's-inn; and of Messrs. FULLER & HORSEY, Billiter-street, E.C. where plans of the property may be seen.

FREEHOLD GROUND TO BE LET, term ninety-nine years.—A most desirable frontage of about 160 feet, for good shops, in a first class situation, near to the Lark Hall Tavern, Clapham, at a low ground-rent.—Apply to Mr. J. THOMAS, Architect and Surveyor, 10, Denmark-street, Camberwell.

SAINT HELEN'S, LANCASHIRE.—TO BE LET, on Lease, the extensive MANUFACTURING PREMISES known as the Ravenhead Copper Smelting Works, situate at St. Helen's, with a wharf on the canal, and a branch of the St. Helen's Railway running through the property. The entire site is about 20 acres, of which about 5 acres are occupied by the works, the remainder being arable and pasture land. The buildings comprise a series of very substantially-erected, light, and lofty ground floor factories, arranged for the purposes of copper and silver smelting works, but they will be available for many other large manufacturing establishments, as they possess the advantages of direct communication by rail or water carriage with all parts of the kingdom. Coals can be obtained from pits in the neighbourhood at an almost nominal price, and labour is cheap and abundant.—For particulars apply to Messrs. FULLER & HORSEY, 13, Billiter street, London, E.C.; and Messrs. HARRISON & FINCH, 2, Gray's-inn, London.

TO BUILDERS and OTHERS.—TO BE LET, several PLOTS of BUILDING LAND, situate in the best part of Stoke Newington, where houses are in great demand. Bricks supplied on the estate at a low price. Sand may be raised on the ground for building purposes.—Apply to Mr RODDA, at the Estate Office, Bouverie road, Church-street, Stoke Newington.

ELIGIBLE BUILDING LAND TO LET, on 99 years' Lease, some in Kentish Town, close to intended line of Midland Railway; other close to a railway station seven miles from town, east. Advances made.—Apply to THOMAS NUNN & SONS, 27, Lamb's Conduit street, W.C.

LAYHAM, near HADLEIGH, SUFFOLK. TO BE SOLD by PRIVATE CONTRACT, a BRICK KILN in full trade, with an unlimited supply of capital brick and tile earth, 8 acres of productive arable and 4½ ditto of superior pasture land, with barn, shed, and two cottages, all in good repair, lying adjoining the high road, and within 1¼ mile of the railway station. To brickmakers desirous of a profitable business the above presents an opportunity not often to be met with.—Particulars can be obtained on application to Messrs. NEWMAN & HARPER, Solicitors; or to Mr. JOHN BOWLRE, Auctioneer, all of Hadleigh.

LEWISHAM HIGH ROAD.—BUILDING LAND TO BE LET. Frontage of 88 feet, depth of 140 feet, for the erection of three or four dwelling houses, upon a term of eighty years. Land-tax redeemed.—Apply at Leathersellers' Hall, St. Helen's-place, E.C.

BUILDING LAND, BAYSWATER.—A few remaining PLOTS, for Private Houses and Stables, well situated on an important estate within three minutes' walk of Westbourne-grove. Ground-rent moderate.—Apply to Mr HUKINS, Architect and Surveyor. Office, Westmoreland-road, Talbot-road, Bayswater.

HIGH STREET, BOROUGH.—The LONG LEASE of a large HOUSE in the Borough, with a BUILDING SITE for warehouses or workshops in rear, TO BE SOLD. It is a free licensed public house, but the lease would be sold for any suitable business.—Apply at the Estate Office, 21, Walbrook.

HENLEY-ON-THAMES.—BUILDING GROUND on the Banks of the Thames.—TO BE LET, on Building Lease, THREE PLOTS of GROUND, immediately adjoining the new road by the river side leading from Henley to the Great Western Railway Station. Two of the Plots have a frontage to the river of 117 feet and a depth of about 110 feet, and the other a frontage of 53 feet and a depth of 96 feet. The land is most beautifully situate, and commands extensive views of Park Place and the River, offering advantages for building first-class villa residences seldom to be met with.—Full particulars may be had of Messrs. COOPER, Solicitors, Henley-on-Thames; and Messrs. HEWS & SON, Estate Agents, Henley-on-Thames.

BARBERS' HALL.—No Tender for a Building Lease of part of the Hall and Premises in Monkwell-street, Wood street, having been accepted, the Company are willing to enter into negotiations for LETTING the same by PRIVATE TREATY.—Particulars and condit ons to be obtained from the CLERK, 4, Warnford-court, Throgmorton-street, E.C.

IMPORTANT SALE.—HENLEY-UPON-THAMES, Oxfordshire.—TO BE SOLD by PRIVATE CONTRACT, the valuable and beautiful ESTATE known as BADGMORE FARM, in the parish of Henley upon-Thames. The Estate comprises 169 acres of excellent Arable and Grass Land, and 21 acres of valuable Wood Land. If no acceptable offer is made for the entire property, the Proprietor will not object to divide it into four lots, in which case—

Lot 1. Would comprise a substantial brick-built Residence, with excellent farm buildings, and nine inclosures of arable and grass land, containing together about 106 acres

Lot 2.—Three valuable pieces of arable Land, containing together about 27 acres. Part of these lands have a frontage to the road leading from Henley to Greys, and adjoin the Park of Badgmore House.

Lot 3.—Two excellent pieces of arable Land, containing about 30 acres, and very valuable Wood Land containing about 17 acres

Lot 4.—Two pieces of arable Land containing about 10 acres

This Property, which lies on a beautiful slope near the town of Henley, overlooking the Fawley Court Estate, is admirably suited for the site of a mansion, the greater part of it being easily convertible into park ground; or, if divided, it presents many desirable sites for villas, to all which there are excellent roads. Lots 1 and 4 extend down to and have frontages the whole length of the Fair Mile, and the greater part of the Estate lies within a mile of the Henley Railway-station.—For further particulars and to treat for the same, apply to Messrs. COOPER, Solicitors, Henley-upon-Thames, at whose office a plan of the Property may be seen.

NEAR to LONDON BRIDGE and KING WILLIAM STREET.—TO BE LET, for 63 years, a valuable SITE for OFFICES. The ground has at present a building upon it. Light excellent.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street, City.

TO BE LET, a Capital WHARF and DRAWDOCK, known as "Searle's Wharf," most eligibly situated at the foot of New Westminster Bridge, and opposite the Houses of Parliament.

This Drawdock has been closed for some years, and is now about to be re-opened.

From its excellent situation and the probability of the Scotland Yard Wharfs being closed at an early day by the Thames Embankment, a very valuable business may no doubt be depended upon.

A Residence is attached, which may or may not be taken with the Wharf or Drawdock.

Apply to Mr. W. HEWETT, 84, York-road, Lambeth.

TO BUILDERS and OTHERS.—TO BE DISPOSED OF, with immediate possession, at an improving seaside town and watering-place, about forty miles from London, an old-established and lucrative BUSINESS, now in full work, the present proprietor having carried it on for forty years. Satisfactory reasons for leaving.—Terms and all particulars will be given by applying to Mr. THORN, Builder, 97, Down street, Piccadilly, W.

FOR SALE.—A TIMBER, RAILWAY-KEY, and TREE-NAIL ESTABLISHMENT, about sixty miles from London, adjoining a canal, and four miles from a railway station; fitted with suitable machinery; the whole in good condition, and now doing a profitable trade. Not more than 3,000l. would be required to purchase the plant, machinery, goodwill, &c.; a portion might be allowed to remain on mortgage. Some large contracts for keys, tree-nails, ferrules, and waggon scantling are now being executed. Satisfactory reasons will be given by the present proprietor for leaving.—Apply by letter, prepaid, to Box 30, Post-office, Northampton.

TO STONEMASONS.—TO BE DISPOSED of a BUSINESS, in consequence of the death of the proprietor. Amount 60l. the stock, &c. worth all the money.—Apply to Mr. JAMES WINTER, Builder, Brentwood, Essex.

TO PLUMBERS, PAINTERS, & OTHERS. TO BE DISPOSED OF, in Church-street, Hackney, an old-established BUSINESS in the above line, in consequence of the death of the proprietor. Small stock (to be taken at a valuation), with every requisite necessary for carrying on business. Lease of very desirable premises, with large workshop, stabling, &c.—Apply to Mr. ROSE, Solicitor, 19, Change Alley, Cornhill.

HONDURAS WHARF AND FALCON WHARF,

JUROR—Class XXX. INTERNATIONAL EXHIBITION 1862.

PAPIER MACHE AND CARTON PIERRE WORKS, 49, RATHBONE PLACE, W.

GEORGE JACKSON AND SONS

(Established in 1750)

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic, Elizabethan, Italian, Renaissance, Louis XIV. XV. XVI and many other styles; also rich or simple Panel Decorations, Elizabethan and Gothic Dados, Door Caps, Mouldings of all sizes, and in their varied selection of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Column and Pilaster Caps, all executed in the highest style of art.

The large and lengthened experience of GEORGE JACKSON and SONS in decorations of Drawing and Dining Rooms, Libraries, &c. for private houses, or public buildings, many of which they have had the honour of executing under Architects of the highest eminence, enables them with confidence to direct notice to that branch of their business.

Upholsterers are invited to inspect the large variety of Glass Frames, Tables, Cornices, Screens, Candelabra, &c. The large extent of their works, and the recent adoption of steam-power and machinery, enable them to offer very superior advantages in materials and speed; while for design, quality, relief, and finish, they flatter themselves they stand unrivalled.

When ordering the above, send FINISHED THICKNESS of Shutters, and the way they go up
Sold by all Ironmongers, and the Inventor,
GEORGE JENNINGS,
Sanitary and Engineering Depôt, Holland-street, Blackfriars-road.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM SIR RAYMOND BARLOW, late VENTNOR, ISLE of WIGHT Commissioner Testimonial.—
"March 10th, 1862.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, I answer positively. Many builders and other persons have lately examined it, and there is not the least appearance whatever since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected in."
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

UNDERHAY'S PATENT REGULATOR CLOSETS for constant or intermittent supply, dispensing with Cisterns, Service Boxes, Valves, Levers, Cranks, &c. &c. Much time is saved in fixing, and a better flush of water obtained in use.
Pan, Valve, Self acting, and Servants' Closets on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed, 50,000 of them have been sold, and no instance of failure has occurred.
TO ARCHITECTS, BUILDERS, PLUMBERS, &c.
In consequence of the BANKRUPTCY of the late firm of C. BOTTEN & SON,
F. G. UNDERHAY
now manufactures on HIS OWN ACCOUNT his Patent Regulator Water-Closets, Valves, Gas Meters, &c. on the same premises.
CRAWFORD PASSAGE, CLERKENWELL, LONDON, E.C.

J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve. Pan.
The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply pipe. Cistern valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

TYE & ANDREWS' NEW PATENT SINK TRAP is universally admitted to be the only perfect Trap for Sinks in Domestic Dwellings, as fixed at the perpetual Institutions. Among others, Wellington Barracks, Royal College of Surgeons, &c. &c. Prospectuses on application to the Patentees, TYE & ANDREWS, Brixton-road.
SUPPLIED BY ALL LEAD MERCHANTS AND IRONMONGERS.

HAY'S PATENT WATERPROOF GLUE and INDIA-RUBBER VARNISH.—To ARCHITECTS, BUILDERS, PAPER-HANGERS, &c. &c.—The WATER-PROOF GLUE is a special anti-dinic, also is suitable for contractors, plasterers, fire-bricklayers, &c. &c. The VARNISH for damp walls, previous to papering, coating zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Booth, contractors, Gosport:—
"We have repeatedly used your Waterproof Glue as a preventive against damp, and have found it most valuable in preparing walls to receive paper. In one instance, where the walls were thoroughly saturated with moisture from earth filled against the outside, we used your varnish internally, and papered the surface, within a few hours of its being applied, with complete success. We have also used your preparation for coating a large number of cast iron piles, at the Gunwharf, Portsea, for her Majesty's War Department."
To be had from all Ironmongers, Oil and Colourmen, &c.
Manufactory, Chandos-street, Portsmouth: Mr. GEORGE WEEKS, Manager. GEORGE G. WARDEN & CO. General Agents, 12, London-street, London, E.C. where specimens of its application can be seen.

MESSRS. KENNEDY & BONNY are instructed by the Directors of the North London Railway Company to SELL by AUCTION, on the PREMISES, Broad street Buildings, on TUESDAY to WEDNESDAY next, APRIL 7th and 8th, at TWELVE o'clock the second portion of the excellent MATERIALS of about eighty Houses, situate in Broad street Buildings, Peter street, and Sweetapple, E.C.; also, rising capital stock bricks, stone, oak and other timbers, great quantities of excellent paneling, cast and wrought iron, and every description of valuable building materials, and several tons of other lead; office fittings, street and other doors, sashes, battens, floor boards, slates, tiles, ridgings, and other valuable and useful items.—May be viewed MONDAY previous, and Catalogues had at the Offices, 34, Broad-street Buildings, 23, Kingsland road, and Camden Town.

MIDDLESEX.—Valuable and important Freehold Building Land.

MESSRS. NORTON, HOGGART, & TRIST have received instructions from the Trustees of the late Samuel Martin, Esq. to offer for SALE, at the MART, on WEDNESDAY, APRIL 29th, at TWELVE, in one lot nearly 12 acres of exceedingly valuable FREEHOLD MEADOW LAND, beautifully situate at Great Stanmore, Middlesex, adjoining the estates of JNO. KELK, Esq. and — FORTNUM, Esq. having an important frontage of about 1,050 feet to the high road from London to Watford, immediately available for building purposes, and presenting to land societies and others an unusual opportunity for a profitable speculation. The land contains an abundance of fine gravel. May be viewed, and particulars early had at the Abercorn Arms Hotel, Great Stanmore; of Messrs. CARDALE, ILIFFE, & RUSSELL, Solicitors, No. 2, Bedford-row; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad-street, Royal Exchange.

LEYTON, ESSEX.—Valuable Freehold Building Land.

MESSRS. NORTON, HOGGART, & TRIST have received instructions from the Devisees under the Will of the late John Masterman, Esq. to offer for SALE at the Mart, on WEDNESDAY, the 13th day of MAY, at TWELVE, in four lots, about 21 acres of exceedingly valuable FREEHOLD BUILDING LAND situate on the high roads from London and Stratford to Walthamstow, with an easy distance of the Lea Church and Railway stations at Leyton and Leytonstone, in the county of Essex, and about six miles from London, viz.—Lot 1. A valuable Plot of Meadow Land, with extensive frontages to the Lea Bridge-road, Low house, Stubbs, and Shed, having a very important frontage of about 582 feet to the high road, 300 feet to the Lea Bridge-road, and abutting on the Low House and Shed. Lot 2. Three Plots of Land, adjoining lot 1, having extensive frontages to Capworth street, leading from London to Woodford, and containing together 15a. 3r. 39p. The whole of the lands are well adapted for the erection of detached and semi detached villas. May be viewed, and Plans and particulars had of Messrs. HUGHES, MASTERMAN, & HUGHES, Solicitors, No. 17, Bucklersbury; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad street, Royal Exchange.

RED-HILL, SURREY.—Valuable Freehold Building Land, and a Brickfield and Pottery.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer for SALE, at the MART, on WEDNESDAY, May 6th, at TWELVE, in one lot, a very valuable FREEHOLD BUILDING LAND, situate adjoining the estate of P. Hanbury, Esq. within an hour's journey of the metropolis, and only half a mile from the Red-hill Junction Station of the South-Eastern and Brighton Railways, in the county of Surrey. It has an extensive frontage to the high Road to and Brighton road, stands high, commands fine views over the beautifully timbered park of Hatton, and offers first-rate sites for the erection of several superior residences, or for a moderate-sized mansion; it presents also a rare opportunity for a profitable building scheme; let to a yearly tenant. Also a valuable Freehold Brickfield and Pottery, situate in the rear of the above land, having an extensive frontage to the road leading from Lickfold lane to Merstham, containing valuable brick earth, and adapted for building purposes. It comprises about seven acres, and is let to Mr. W. Thomas, for a term, which will expire in 1868, at a rent of 50*l.* per annum. May be viewed, and particulars, with plans, had at the hotels at Red hill, Reigate, and Croydon; of Messrs. CROWDER, MAYNARD, SON, & LAWFORD, Solicitors, 57, Coleman-street; of E. JENNER, Esq. Architect, No. 8, Laurence Pountney-lane; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad street, Royal Exchange.

NORTH LONDON RAILWAY.—KINGSLAND JUNCTION

MESSRS. KENNEDY & BONNY will SELL the MATERIALS of the Houses and Shops required for the Junction with the Line near the Tramway Cafe in the Kingsland-road, the last week in APRIL, or early in MAY. (See future advertisements.)

Camden Town, April 2nd, 1863.

IMPORTANT SALE OF OAK AND ELM TIMBER in the Parishes of Ash, Ightham, Wrotham, Meopham, Horton, Darenth, Hartley, Southfleet, and Farningham, Kent.

MR. WILLIAM HODSOLL will SELL by AUCTION, at the LION HOTEL, Farningham, Kent, on FRIDAY, APRIL 10th, 1863, at TWELVE, about 700 apparent OAK TIMBER TREES, and 1400 TIE TREES, together with the crop, top and bark, standing in the above and Parishes. Also 25 capital ELM TREES, and 1000 Ash Trees, and 3 ditto at Betson.—May be viewed, and particulars had on the Premises, and of Mr. ALLEN HARTLEY; and Mr. HODSOLL, Farningham.

LAND for MANUFACTORIES (Chemical or other), with good access by Water, TO BE SOLD.

MR. JOHN WALLEN has received instructions to SELL in large or small plots, about Nine Acres of FREEHOLD LAND, abutting on Barking Creek (navigable for vessels of 300 tons burden), and on the Tilbury line, and within half a mile of the Railway station. For particulars apply to Mr. JOHN WALLEN, 68, Old Broad-street, E.C.

VALUABLE BUILDING LAND, WITH BRICK EARTH.

MR. JOHN WALLEN is instructed to SELL FOURTEEN ACRES of peculiarly eligible FREEHOLD BUILDING LAND, within a quarter of a mile of the Kingsland Junction of the direct City Railway with the main North London Railway, and so placed as to afford the means of making the shortest route from thence to Upper Clapton, and from the Kingsland Junction (a few furlongs in the direct road), the brick earth being in great demand for the construction of the railway as well as for ordinary works.—Apply to Mr. JOHN WALLEN, 68, Old Broad street, E.C.

BUILDING LAND TO BE LET.—Savill row, Walworth, Surrey, within five minutes' walk of the Elephant and Castle, contiguous to the Chatham and Dover Railway station, and also to the Greenwich line, and within 20 minutes from London by rail. The Fishmongers' Company are prepared to receive PROPOSALS for the whole or any part of the ESTATE, lying between Savill-row and Gloucester-row, the same having been laid out into plots and frontages for the erection of dwelling houses, shops, or other buildings, on a BUILDING LEASE, or Leases for Eighty Years, at the option of the tenant. The roads are formed, the kerbs and sewers made, footpaths laid and drained, so that the estate is now ready for immediate building operations. For particulars apply to Mr. W. B. TOOKE, the Clerk of the Company, Fishmongers' Hall, London-bridge; and at the Office of Mr. RICHARD SUTER, Architect and Surveyor, 28, Fenchurch street, where plans and conditions may be seen.

BUILDING LAND TO BE LET, HACKNEY, close to the Railway Station, for small Dwelling Houses.

NORWOOD, close to the Crystal Palace, for Shops and Villas.

PERRY HILL, SYDENHAM, for Shops and Villas. Advances in each case if required. Apply to Mr. F. K. GLEEN, 25, College-hill, Cannon-street, E.C.

BUILDING LAND TO BE LET or SOLD, at Sydenham, near the Church, the Railway Station, the Crystal Palace and Park. It fronts a wide, handsome roadway, and has ample depth for garden grounds. All the houses on the estate are of a good class, and the roads studded over an average return of 12 per cent. on the outlay. The remaining frontage will be let at a low rent, to secure the good and best specimens covered.—Terms and plans, apply to Messrs. EDWIN FOX & BOUSFIELD, Land Agents, 11, Clement's-inn street, Bank, E.C.

FREEHOLD GROUND between the Forest Hill and Sydenham Stations TO BE LET on long Building Leases.—For plan and particulars, apply to C. F. REEKS, Esq. Architect, 1*a*, Middle Scotland yard, S.W.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of C. & W. Wyman, Nos. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields, and published at the said Church Vestry, at the Office of "The Builder," No. 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex. Saturday, April 4, 1863.

ARCHITECTURAL ASSOCIATION.—A CONVERSAZIONE will take place on FRIDAY EVENING next, APRIL 17th, at the Rooms of the Association, 9, Conduit-street, Regent-street, W. at EIGHT o'clock.
CHARLES J. ADAMS, } Hon. Secs.
H. A. REEVES, }

ROYAL MANCHESTER INSTITUTION.
The Council have determined that there shall be no SPECIAL and SEPARATE EXHIBITION of WATER COLOUR DRAWINGS in the present year.
THOMAS WORTHINGTON, Hon. Sec.
April, 1863.

ROYAL MANCHESTER INSTITUTION.
EXHIBITION of MODERN PICTURES and other WORKS of ART.—Intending contributors are informed that the Exhibition of Modern Pictures in Oil and Water Colours, specimens of Sculpture and Casts, and Architectural Designs, will be opened as soon as practicable after the closing of the Royal Academy, and that all Works of Art must be sent to or to arrive not later than the 17th of AUGUST.
Pictures, &c. from London will be forwarded by Mr. JOSEPH GREEN, 14, Charles-street, Middlesex Hospital, if delivered to him before the 3rd AUGUST, by artists who have received the invitation circular; from other places artists who have also received such circulars are requested to send them by the most convenient and least expensive conveyance. Works sent by other parties must be carriage paid.
Contributions to the Exhibition will not be confined to artists alone, but will be extended to the admission of works from private individuals, and from dealers.
The council offer a prize of Fifty Guineas to the artist of the best picture exhibited, provided it has been painted within three years, but they reserve the power of withholding the prize should there be no work of sufficient merit in the collection.
THOMAS WORTHINGTON, Hon. Sec.
Royal Manchester Institution, April, 1863.

CAUTION.—To BANKERS, BILL BROKERS, and OTHERS.—Whereas Bills of Exchange or Promissory Notes have been and may be put in circulation by Mr. Daniel Pearson, purporting to be accepted or made by Messrs. "Lloyd, Pearson, & Lloyds," or "The Madeley Coal and Iron Company," of Madeley, in Staffordshire. And whereas the Partnership between Messrs. Lloyds and Mr. Daniel Pearson has been duly dissolved, and an injunction has been granted by the Court of Chancery to restrain the said Daniel Pearson from drawing, accepting, endorsing, giving, or negotiating any Bill of Exchange or Promissory Note in the name of "The Madeley Coal and Iron Company," or in the name of "Lloyd, Pearson, & Lloyds," or in any other name whereby the Messrs. Lloyds might be rendered liable. All persons are therefore cautioned against dealing with any such Bills of Exchange or Promissory Notes; and it is requested that any attempts to negotiate the same may be immediately given to Messrs. R. & S. MULLENS, Solicitors, No. 7, Poultry, London, E.C.
London, 18th March, 1863.

MASTER.
C. Macdonald; Clarke,
Assisted by Teachers from the Training School of Art, South Kensington.

The Government course of instruction is the basis of that pursued in the School; but it is MODIFIED TO MEET THE PRACTICAL WANTS OF STUDENTS: the Committee hearing that this School may afford to Artist Workmen the means of entering, at once, upon the studies bearing most directly upon their several pursuits; avoiding, as far as possible, protracted courses of merely elementary work.
There are a few Vacancies for New Students, but immediate application is necessary.
Further information at the School.
C. MACDONALD CLARKE, Hon. Secretary.

ROYAL SCHOOL of MINES.—Notice.—The remainder of the Course of LECTURES on GEOLOGY (twenty-four), will be given by Mr. J. BEETE JUKES, M.A. F.R.S. on MONDAYS, TUESDAYS, THURSDAYS, and FRIDAYS, at HALF-PAST ONE, commencing on the 13th APRIL. During the Course Lectures will be given in the field. Fee 2l.

Also, in conjunction with the above, the Exhibition of the Society of Sculptors of England. MORETON EDWARDS, Hon. Sec.

PRACTICAL GEOLOGY, KING'S COLLEGE, LONDON.—Professor TENNANT, F.G.S. will commence a COURSE of LECTURES, on WEDNESDAY, APRIL 15, at NINE a.m. having especial reference to the application of GEOLOGY to ENGINEERING, MINING, ARCHITECTURE, and AGRICULTURE.—The Lectures will be continued on each succeeding Friday and Wednesday, at the same hour. Fee, 1l. 11s. 6d.
R. W. JELF, D.D. Principal.

THE EXHIBITION of ALUMINIUM and ALUMINIUM BRONZE will OPEN APRIL 1st, 1863. 2,000 SPECIMENS, illustrating the application (Ornamental and Useful), of these interesting Metals are NOW ON VIEW at MAPPIN BROTHERS' New Rooms, 222, Regent-street. Admission by Card.

BILLING'S PATENTS.
CHIMNEY TERMINALS, THROAT VALVES.
NOTICE to ARCHITECTS.—The Proprietors of the late Mr. Billing's Patents have secured the services of Mr. H. H. COLLINS, M.I.B.A. of No. 10, Poultry, E.C. as the Consulting Architect, from whom full particulars and the reduced prices may be obtained; or from the Manager, Mr. TYLER, 15, Abingdon-street, Westminster, S.W.

COMPETITIONS.

ESTIMATES required for the ERECTION of a NEW CHAPEL, &c. in the Walworth-road. The drawings and specification can be seen, and any information obtained, at the Offices of the Architects, SEABLE, SON, & YELF, 4, Bloomsbury-place, W.C. The quantities can be obtained at a charge of one guinea per copy, half of which will be returned on the receipt of the Tender.—Applications to be not later than SATURDAY, the 18th instant.

HEATH-VILLE ESTATE, GLOUCESTER.
TO ARCHITECTS.—TWO PREMIUMS, of Thirty and Fifteen Guineas, will be awarded to the best and second selected DESIGNS for LAYING OUT the above Estate (consisting of 33 acres, within a few minutes' walk of the Railway Station) for the purpose of Erecting Villas and other Residences. A lithographed plan and full particulars may be had upon application to Mr. W. MATTHEWS, Solicitor, Gloucester, to whom the Designs must be sent not later than the 14th of MAY next.

India Office, 31st March, 1863.

DESIGN for COMPETITION.
EUROPEAN GENERAL HOSPITAL.
The Bombay Government are prepared to receive DESIGNS for a new EUROPEAN GENERAL HOSPITAL, to be built on the Esplanade, Bombay.
Lithographed copies of the general plan of the accommodation required, with a schedule of measurements according to the arrangements of the building, which have been generally approved by the medical authorities and Government, together with plans of the proposed site, can be had on application at the Office of the Superintending Engineer, Presidency Circle, Bombay, and at the India Office, London.
The rates on which the work is to be calculated will also be furnished at these Offices, and the gross estimate is not to exceed Rupees 4,80,000.
Complete plans and estimates are also required for Residencies for the Surgeon and House Surgeon, and for Quarters for Eight Sick Officers, to be arranged in two or three blocks distinct from, but in the immediate vicinity of the main Hospital.
The designs of these buildings should harmonize in character and style with the main building.
The estimate for these, calculated on the same rates, should not exceed 1,25,000 Rupees.
There must be ample provision for through ventilation, which is obtained in Bombay by a sea breeze blowing generally from W. to S.W. during the months from May till September, and from various points from N.W. by N. to S.W. by S. during the rest of the year; provision should be made to exclude the N. and E. winds, which blow most frequently by night.
The walk must be protected as far as possible from the direct rays of the sun.
The designs are unrestricted as to style, provided it is suited to the climate and to the use to which the building is to be devoted, and as to materials, provided that they are procurable in Bombay at prices which will admit of their being used in the building as designed.
The designs must include—
1. Ground plan and plan of each story.
2. Elevation of each of the four faces.
The plans and elevations to be on a scale of not less than 10 feet to an inch; specification and estimate with sections, &c. in sufficient detail to enable the judges to decide whether the plan can be carried out within the sum allowed.
Prizes will be awarded for the two best designs—Rs. 2,500 for the best, and Rs. 1,000 for the next in merit, provided the design fairly fulfils the above conditions.
If the best designs, in an artistic point of view, fail to fulfil any one of the above essential conditions, the judges will be empowered to reduce or withhold the prize, and no prize will be awarded to a design merely because it fulfils the conditions, if otherwise conspicuously deficient in artistic merit.
The drawings and estimates, &c. should be sent in on or before SEPTEMBER 1st, in the usual manner with motto, and envelopes containing the name and address of the artist, to the Superintending Engineer Presidency Circle, by whom the envelopes will be opened, in presence of the Chief Engineer and Secretary to Government Public Works Department, after the prizes have been adjudged.
All the designs received will be exhibited in the Town Hall, Bombay, for one month before the adjudication of the prizes, and, unless claimed and removed by the authors, for one month afterwards.
The envelope containing the name should state the author's wish whether the name should be appended to the design when exhibited after the adjudication.
The prizes will be adjudged by the Executive Committee of Fort Improvement Commission of the Engineers of the Great Indian Peninsular and Bombay and Baroda Railways, who will be asked to aid Government in the adjudication.
In the event of any design being finally adopted by Government for execution without further modification than is made by the designer at the instance of Government, the prize will be made up to one per cent. on the amount of the estimate as revised by the Executive Committee.
It will be optional to Government to avail themselves of the services of the author in altering or executing any design which gains a prize or premium, any design to which a prize or premium is awarded will remain the absolute property of Government.
Unsuccessful designs will be returned to the authors if claimed by them, or by their authorized agents, within one month from the period of adjudication, during which period, if not claimed, they will remain exhibited in the Town Hall, Bombay.
By order of his Excellency the Governor in Council,
H. RIVERS, Lieut. Colonel, R.E.
Secretary to Government.
Bombay Castle, 12th February, 1863.

TO ARCHITECTS.—100l. PREMIUM.—A PLAN and ESTIMATE of BUILDINGS to accommodate 300 Pauper Lunatics, of the counties of Cavan and Monaghan, from 220 to 230 in a main building, from 70 to 80 in detached cottages containing accommodation for from 35 to 40 patients each, suitable INFIRMARIES contiguous to the main building, a HOUSE for a Medical Superintendent, the necessary Offices for the building, and for a Farm of 40 statute acres, Workshops, &c. walls or a hahs to the exercise ground, yards and gardens, and a boundary wall or other suitable fence to the farm grounds, for the lowest sum compatible with neatness of style and their right attention to the most approved details in workmanship and fitting. One Hundred Pounds will be given for the Plan which shall be judged to be the best by the Committee, unless the Architect whose plan it is shall be employed to carry out the work. The Plan to be the property of the Committee. The Committee will not bind themselves to employ the designer of the best plan to carry out the Works, though their desire will be to do so. The law vests the final decision as to the adoption and the carrying out of any Plan with the Board of Control. The Committee may naturally, however, be expected to yield to any reasonable views on the part of those locally interested, and it has already waived its right of appointing as Architect in favour of the Committee, provided he be a person of acknowledged ability and standing in his profession. Papers setting forth fully the views of the Committee, the building resources generally of the neighbourhood, and a description of the site, with a plan and sections of the grounds, will be sent by post to applicants, and every information given on the ground to those architects who may wish to inspect it, by the Secretary to the Committee. Plans must be sent for consideration to the "Secretary to the Building Committee of the Lunatic Asylum, Monaghan," on or before the 15th day of JULY next. An invitation will be sent to those Architects whose plans are most approved of to attend, if they should wish to do so, on a fixed day, for conference with the Committee.
9th March, 1863.

COMPETITION.

TO STONE CARVERS.—Drawing Competitions.—Open to all of the above profession.—The Society of Ornamental Sculptors offer premiums for designs of a Capital in Natural Foliage conventionally treated. The dimensions of such to suit a ten-inch column.—1st prize, £2; 2nd, 1l 5s.; 3rd, 15s. To be sent in under motto, accompanied by sealed letters, stating name and address, to No. 2, Hollywell-street, corner of Esher street, Strand, W.C. JAMES GOUDER, Secretary
Westminster, S.W.
N.B. No drawing received after the 1st of JUNE.

CONTRACTS.

ARMY CONTRACTS.—Commissariat Office, Aldershott, 8th APRIL, 1863.—Sealed TENDERS will be received at this Office until NOON on WEDNESDAY, the 15th MAY, 1863, from persons who may be willing to enter into Contracts to supply FLOUR and MEAT in such quantities as may be required, from the 1st JUNE to 30th NOVEMBER, 1863, for the use of Her Majesty's Forces stationed at Aldershott Camp, and within the command.
Separate Tenders are required for Flour and for Meat.
Forms of Tender and Conditions of Contract may be obtained on application at this Office, by letter or in person, between the hours of TEN and FOUR o'clock.
Tenders on the printed forms must be properly filled up and signed, and delivered at this Office under closed envelope, marked on the outside "Tender for Commissariat Supplies"; and no Tender will be noticed unless made on forms obtained from this Office, and delivered by the hour appointed.

Forms of Tender and conditions of contract may be obtained on application at this Office, by letter or in person, between the hours of TEN and FOUR o'clock.
Tenders on the printed forms must be properly filled up and signed, and delivered at this Office under closed envelope, marked on the outside "Tender for Flour for Hospital Bread"), and no Tender will be noticed unless made on forms obtained from this Office, and delivered by the hour appointed.

CHEAP CHURCHES, CHAPELS, and SCHOOL CHURCHES.—The Committee for the Church Congress, which will meet in Manchester in October next, are desirous of receiving Communications from Architects and others who have built cheap churches or chapels, with the view of exhibiting at the Congress the obtaining of such as they may approve, together with the statements of the cost accommodation, &c.—Address the Secretaries of the Church Congress, 2, Essex Chambers, Essex street, Manchester

KINGSTON-UPON-HULL LOCAL BOARD of HEALTH.—To CONTRACTORS.—The Local Board of Health of Kingston upon Hull are prepared to receive TENDERS for the OUTFALL SEWERAGE of the WEST DISTRICT of the Borough of Hull, comprising the execution of upwards of four miles brick sewers all their works in connexion therewith. Trial shafts are to be sunk on the proposed lines of sewers, the results of which may be seen, with the plans of the intended works, on application to Mr. J. FOX SHARP, C.E. Surveyor to the Local Board, at his Office, Saddle-street, Hull, where copies of the specification, &c., may be obtained, and forms of quantities may be obtained on payment of two guineas to be returned to parties tendering in accordance with the conditions, on or after THURSDAY, the 16th inst. Sealed Tenders, endorsed "West District Drainage," addressed to the Chairman of the Committee of Works, Local Board, Hull, must be forwarded on or before THURSDAY, 30th APRIL, 1863. The Board do not bind themselves to accept the lowest or any Tender.—By order,
Hull, April 2nd, 1863. C. S. TODD, Clerk to the Board.

TO BUILDERS.—TENDERS are required for the ERECTION of a small CHAPEL at Belvedere, Erith, Kent. Drawings and specification may be seen, and all particulars obtained, at the Office of Mr. JAMES WILLIAM HAIRRISHON & PITE, 56, Bloomsbury-square, W.C. The lowest or any Tender will not necessarily be accepted.

WRITTLE GAS COMPANY, LIMITED.
The Directors of the Writtle Gas Company, Limited, invite TENDERS for the ERECTION of new GAS WORKS, at Writtle, in the county of Essex. Plans and specifications of the same may be seen on application to the Secretary, under the Office of Mr. JABEZ CHURCH, Civil Engineer, Chelmsford. The work is divided into two contracts. No. 1 contract comprises the builder's work, and No. 2 contract the ironwork, apparatus, and mains. Sealed Tenders for the respective contracts are to be addressed to the Secretary, and delivered at the Company's Offices on or before the 29th day of APRIL, 1863.
F. A. JONES, Secretary.
Writtle Gas Company's Office, High street, Chelmsford,
March 26, 1863.

TO CONTRACTORS and OTHERS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for the CONSTRUCTION of the following SEWERS, in the parish of Battersea, viz.:—About 4,220 feet of 2 feet 9 inches by 2 feet 6 inches Brick Sewer, 3,153 feet of 2 feet by 2 feet Brick Sewer, and 1,370 feet of 2 feet 3 inches Brick Barrel Sewer; and also for the EXCAVATING for and LAYING of, about 5,150 feet run of STONEWARE PIPE SEWERS, of various sizes (the pipes for which will be supplied by the Board). The specification, plans, and necessary particulars of all Path Reinstatement obtained, at the Office of Mr. JOHNSON, Surveyor, Manor Cottage, Larkhill Lane, Clapham, between the hours of NINE and FOUR.—Tenders are to be sent in under seal to the Board as below, on or before TUESDAY, the 21st APRIL next, and are to be endorsed "Tender for Sewers." Persons tendering must be in attendance at the Offices of the Board, on WEDNESDAY, the 22nd APRIL, at TEN o'clock p.m. when the Tenders will be opened. Security will be required for the due performance of the contract. The Board do not pledge themselves to accept any Tender.—By order of the Board of Works for the Wandsworth District,
ARTHUR ALEX. CHISELLS, Clerk to the Board
Battersea-rise, Wandsworth, S.W. March 23, 1863.

TO BUILDERS.—TENDERS are required for the ERECTION of TWELVE HOUSES, in Devonshire-road, Stanley Roads, Hackney, for the Trustees of Petherick Land and Building Society. The plans may be inspected, and a copy of the specification (price 2s. 6d.) obtained at the Offices of the Society, between the hours of TEN and FOUR o'clock, on and after APRIL 7th, up to APRIL 21st. Tenders, in the forms attached to the specifications, are to be left with or sent to the Secretary, sealed, and marked "Tender for Houses at Hackney," at or before FOUR o'clock on TUESDAY, APRIL 21st. References and security may be required, and the lowest or any Tender will not necessarily be accepted.
HENRY J. PHILLIPS, Secretary.
Offices, 34, Moorgate-street, London.

CITY of LONDON.—TENDERS for LEASE.—Parties desirous to TAKE on LEASE the Premises No. 23, Lawrence Pountney Chapelle, from the Master and Fellows of Trinity College, Cambridge, must make their application on or before the 21st instant. The lessors will not bind themselves to accept the highest or any Tender. Forms of Tender may be obtained at Mr. MARSH'S Offices, 9, Charlotte Row, Mansion House.
Dated April 1st, 1863.

TO BUILDERS.—Persons desirous of CONTRACTING for the RESTORATION of the CHANCELS of the PARISH CHURCHES of MARLDON and PAINGTON, in the county of Devon, may communicate their names to Mr. CHRISTIAN, Architect, 7a, Whitehall-place, London, before APRIL 16th. Mr. Christian does not bind himself to accept or reply to any such communications.

TO BUILDERS.—TENDERS are required for the ERECTION of TWENTY-FOUR COTTAGES (or any smaller number) for Gatekeepers, at Level Crossings on the Great Western Railway. Plans, bills of quantities, &c. may be seen at the Chief Engineer's Office, Paddington Station, and at the Offices of the District Engineers at Reading, Gloucester, Leamington, and Frome. Tenders to be delivered at the Secretary's Office, Paddington, not later than ELEVEN o'clock a.m. on the 13th of APRIL, 1863.

TO EXCAVATORS.—TENDERS for EXCAVATING for NEW BUILDINGS in Upper Thames-street and Knight Rider-street, City, and for removing the earth, about nine hundred yards or rubbish, to Paddington Station, and at the Offices of the District Engineers at Reading, Gloucester, Leamington, and Frome. Tenders to be delivered at the Secretary's Office, Paddington, not later than ELEVEN o'clock a.m. on the 13th of APRIL, 1863.

TO BUILDERS.—BUILDERS desirous of TENDERING for the erection of the NEW CHURCH in the parish of Witheycombe Raleigh, Exmouth, Devon, are requested to send sealed Tenders on or before the 21st day of APRIL, to the Rev. H. L. HUSSEY, Parsonage, Witheycombe Raleigh, Exmouth. Plans and Specifications may be seen on application at the Grange, Witheycombe. The Committee do not bind themselves to accept the lowest or any Tender.
H. L. HUSSEY, Incumbent.
HENRY CLARKE, } Churchwardens.
JOHN HALLETT, }
Architect, E. ASHWORTH, 10, Paris street, Exeter.

TO SCAVENGERS, CONTRACTORS, and OTHERS.—The Commissioners of Sewers of the City of London will meet at the Guildhall of the said City on TUESDAY, the 21st of APRIL, 1863, at TWELVE o'clock at noon precisely, to receive TENDERS for CLEANSING the STREETS, and for Removing Dust, Ashes, &c. from the Houses of the inhabitants; also for Watering certain Streets within the said City, for the term of one year from Midsummer Day next, agreeably to specification, a copy of which may be had at this Office. The City is divided for the purposes of these Contracts into five divisions. Each contract or will be required to enter into a bond in the two separate sureties in the sum of £— for each division for cleansing, and £— for each division for watering, for the due performance of the several Contracts; and the consent, in writing, of the parties proposed as such sureties must be inclosed with the Tender. The Commissioners do not undertake to accept the lowest Tender in any case, or any, unless deemed satisfactory. No Tender will be received after TWELVE o'clock on the day of Sealing, nor will any Tender be received unless it contains inclosed the sum of £20 in Bank of England notes for each division tendered for, in evidence that the same is made bond fide, which sum of money will be returned to each person whose Tender is not accepted, but will be retained in the other cases until the contracts and bonds shall have been duly executed by the parties tendering and their sureties; and in case of such contracts and bonds not being duly executed, the said sums of money will be retained by and forfeited to the said Commissioners.
JOSEPH DAW, Principal Clerk.
Sewers Office, Guildhall, 4th April, 1863.

CONSERVATIVE LAND SOCIETY.—PUTNEY COMMON ESTATE.—TENDERS are invited for the execution of ROAD-MAKING and DRAINAGE WORKS, on the Society's Estate, at Roehampton, parish of Putney, Surrey. The following rough quantities are stated, in order to indicate approximately the extent of the proposed Works; but parties tendering will have to ascertain for themselves the true quantities:—
660 feet run of new road, 40 feet wide, including two footpaths.
400 feet run widening old road, including two footpaths.
312 feet run filling-in water course
170 feet run 3 ft. 2 in. by 2 ft. brick sewer, 4½ in. thick, with invert blocks.
202 feet run 9-in. pipe drains.
8 gully cesspools, including gratings and branch drains.
The plan, sections, details, and specification will be seen at the Office of the Society's Surveyor, Mr. JAMES WYLSON, 53, Norfolk-street, Strand, W.C. Parties to send in their Tenders on or before SATURDAY, APRIL 18. The Committee do not bind themselves to accept the lowest or any Tender.
53, Norfolk-street, Strand, W.C. April 9, 1863.

TO CONTRACTORS, BUILDERS, and ENGINEERS.—The DUBLIN EXHIBITION PALACE and WINTER GARDEN COMPANY (LIMITED) The Directors of this Company are prepared to receive TENDERS for ERECTING the BUILDINGS of the EXHIBITION PALACE, CONCERT ROOMS, and WINTER GARDENS, on the Company's Ground, situate in Hatch-street, and Earlsfort-terrace, Dublin, according to the plans, elevations, and specifications of ALFRED JONES, Esq. Architect, which may be seen at the Secretary's Office, No. 112, Grafton-street, and at the Office of the Architect, No. 3, Molesworth-street on and after the 7th instant. Parties wishing to procure copies of the specification and quantities may have them on application at the Secretary of the Company, and for which a charge will be made. Proposals to be furnished in two parts, viz. one for the Main Building, and one for the Winter Gardens, &c. or either of them singly. The Directors will not necessarily accept the lowest Tender, or any of them, if none should be approved of. The Tenders to be sent under seal to the Secretary's Office, addressed to the Chairman of the Building Committee, endorsed "Tenders for Building," on or before the 4th day of MAY, after which hour no Tenders will be received.—N.B. The 4th of MAY, and not the 25th of APRIL, will be the last day for receiving Tenders. By order,
HENRY PARKINSON, Sec.

STRADBROKE, SUFFOLK.—To BUILDERS.—Persons desirous of CONTRACTING for making considerable ADDITIONS and ALTERATIONS to STRADBROKE VICARAGE, may see the Plans and Specifications at my Office, Museum-street, Ipswich, on and after MONDAY, the 13th instant; and all Tenders are to be sent in, and addressed to the Rev. J. C. HYLE, Stradbroke, on or before SATURDAY, the 25th instant. The Incumbent does not bind himself to accept the lowest Tender.
Ipswich, 9th April, 1863 R. M. PHIPSON, Architect.

TO BUILDERS.—TENDERS are required for the ERECTION of a DWELLING-HOUSE, in the Bowroad Plans, &c. at the Architect's Office, Mr. GREEN, 25, College-hill, Cannon-street. The Advertiser does not bind himself to accept the lowest or any Tender.

TO ENGINEERS.—The Directors of the Bath Gas-Light and Coke Company are ready to receive TENDERS for providing and fixing a WROUGHT-IRON ROOF over a Coal Store about 100 feet long by 31 feet wide.—Particulars will be forwarded on application to Messrs. MANNERS & GRAY, 1, Walcot-buildings, Bath. The Tenders to be delivered at the Company's Offices, Upper Bristol-road, Bath, on or before the 3rd of MAY next, endorsed "Tender for Iron Roof of Coal Store." The lowest Tender will not necessarily be accepted.

TO BUILDERS. — Persons desirous of TENDERING for the erection of the NEW CATHOLIC CHURCH, Stourbridge, Mr. E. WELBY PUGIN, Architect, can see the plans and specifications, and obtain copies of the quantities, by applying to the Rev. WALTER KEEN, Presbytery, Stourbridge, on or after the 21st INSTANT. The Tenders to be sent in directed to the Rev. W. KEEN, by the 28th INSTANT. The lowest Tender will not necessarily be accepted.

QUEBRADA LAND, RAILWAY, & MINING COMPANY, Limited.—The Directors of the above Company, being desirous of constructing a MINERAL TRAMWAY of about 30 miles in length, in connexion with their mines in Venezuela will be glad to enter into communication with contractors who may be willing to execute the work.—Such information and details as the Directors at present have may be obtained at the Offices of Messrs. DUNSFORD & RANKEN No. 9, Broad-street Buildings, City.

CUNDY'S PATENT ECONOMIC, BRICK-OVEN, DOUBLE FALL, DOWN-BAR KITCHEN RANGE.

This drawing represents a Range 4 feet long, 2 feet 4 inches high, and 17 in. deep.
The Hob over the top of the Oven forms a HOT PLATE; the fire passes under it and all round the oven, thereby heating it thoroughly and equally all over.
The sliding Hob, which is fastened to the Winding Cheek, also forms a Hot Plate.
The Oven and Hob can be kept sufficiently hot for the purpose of baking and boiling, with the fire only six inches long.
This Range can be fitted up as a close Kitchener, with Two Ovens, Hot Closets, &c. if required.
This Range, also Cundy's Mutum in Parvo Poor Man's Kitchener, also Cundy's Patent ORIGINAL FIRE-BRICK WARM AIR VENTILATING STOVE, suitable for CHURCHES, HALLS, SCHOOLS, and STAIRCASES,

Can be seen in action every day from Nine till Seven, at the Show Rooms of the MANUFACTURER,
WILLIAM ADDIS,

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above article, (patentee), respectfully wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he most confidently recommends that the Public should be protected in preference to the PATENT LINES made in Hemp, which, whilst they possess neither the STRENGTH nor DURABILITY of Flax, cause greatly additional trouble, and are so much dearer in the end.
They can be obtained of all Ironmongers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.
ESTABLISHED 1774

NAILS and IRONMONGERY,
from BIRMINGHAM direct.
Builders Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at

Now Ready, 15th Thousand with Portrait, 8vo. 10s 6d.

H. R. H.

THE PRINCE CONSORT'S PRINCIPAL SPEECHES and ADDRESSES; with an INTRODUCTION giving some OUTLINES of HIS CHARACTER.

From the "Introduction."

"It must be obvious to the reader of this Introduction that the writer has received the most valuable and important aid from those who, by their constant intercourse with the Prince Consort, could best appreciate the high qualities in him which shone forth in domestic life—from persons in the Royal Household, who saw him daily—from Members of the Royal Family—and especially from the Queen herself. To Her Majesty the writer is indebted for a view of the Prince's character, in which a loving and profound appreciation of his death, the most earnest desire for exact truth, and finally a great liberality of view have been the result of all the various traits of the Prince enumerated in this Introduction, which has been instructed by her who alone saw, with the full light of a complete affection, into the whole beauty and merit of the character of this remarkable man."

Also now Ready, 8vo. 9s.

SERMONS PREACHED DURING THE TOUR OF H.R.H. THE PRINCE OF WALES IN THE EAST, with Notices of some of the Localities visited. By Rev. A. P. STANLEY, D.D. Deputy-Clerk of the Closet, and Canon of Christ Church.

TRUBNER & CO. 60, Paternoster-row, London.

TO BUILDERS and OTHERS.—TO BE DISPOSED OF, with immediate possession, at an improving seaside town and watering place, about forty miles from London, an old-established and lucrative BUSINESS, now in full work, the present proprietor having carried it on for forty years. Satisfactory reasons for selling.—Terms and all particulars will be given by applying to Mr. THORN, Builder, 27, Down-street, Piccadilly, W.

TO PLUMBERS, PAINTERS, & OTHERS TO BE DISPOSED OF, in Church street, Hackney, an old established BUSINESS, in the above line, the occupier of the premises of the proprietor, on his stock (to be taken at a valuation), with every possible necessary for carrying on business. Lease of very desirable premises, with large workshop, stabling, &c.—Apply to Mr. ROSE, Solicitor, 19, Change Alley, Cornhill.

TO PLUMBERS, PAINTERS, GLAZIERS, and GASFITTERS.—TO BE DISPOSED OF, through failing health of proprietor, a BUSINESS, established forty years, situate in one of the most thriving parts of London, E. The lease, fixtures, stock, &c. 700*l.* First-rate investment. A Partner not objected to.—Apply, by letter, H. C. B., T. Kernot, esq. 13, Welbeck street, W.

DEVONSHIRE MARBLE WORKS.—TO BE DISPOSED OF, on account of the death of the late proprietor, a capital BUSINESS, which has been carried on near Torquay for upwards of fifty years. The premises are situated in an important thoroughfare, and comprise a detached villa and commodious house and shop, with workshops and sand immediately contiguous, containing every requisite for an extensive business. The well-known Babbacombe and Petitor marbles and freestones are obtainable within a very short distance.—For further particulars, apply to Messrs. KITSON, Solicitors, Torquay.

PORTLAND CEMENT WORKS.—TO BE DISPOSED OF, on a 14 or 21 years' Lease, the BISHOP'S MARSH CEMENT WORKS, situate on the Medway, near Chatham. Rent, 35*l.* Area, about 8 acres.—Apply to Mr. E. W. PHIBBS, Chatham Hill, Chatham.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving the following extract from a letter from SIR RAYMOND JARVIS, Bart VI MINOR, ISLE OF WIGHT.—Second Testimonial.—"March 13th, 1863.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am inform I that it is to be adopted generally in the houses that are being erected here."

N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON

HAY'S PATENT WATERPROOF GLUE and INDIA-RUBBER VARNISH.—To ARCHITECTS, BUILDERS, PAPER HANGERS, &c. &c. The WATER-PROOF GLUE is a special anti-damp, and is suitable for contractors, joiners, cabinet makers, &c. &c. The VARNISH for damp walls, previous to papering, coating area verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Booth, contractors, Gosport:—

"We have repeatedly used your Water-proof Glue as a preventive against damp, and have found it most valuable in preparing walls to receive paper. In one instance, where the walls were thoroughly saturated with moisture from rain which beat against the outside, we used your varnish internally, and papered the surface, within a few hours of its being applied, with complete success. We have also used your preparation for coating a large number of cast-iron piles, at the Gunwharf, Portsea, for her Majesty's War Department."

To be had of all Ironmongers, Oil and Colourmen, &c.

Manufactory, Chandos-street, Portsmouth: Mr. GEORGE WEEKS, Manager. GEORGE C. WARDEN & CO. General Agents, 15, London-street, London, E.C. where specimens of its application can be seen.

GLASS CASES. H. R. WALTER begs to draw attention to his Old-established Manufactory for GLASS CASES of every description, at prices cheaper than any house in London consistent with quality. Adapted for walls, counters, or centrals; hexagonal or octagon; glazed either in plate or sheet, and in mahogany or gilt metal frames. Shop fittings for every trade equally low, and a large assortment always in stock.

51, GREAT QUEEN STREET, LINCOLN'S INN FIELDS, W.C.
ESTABLISHED 1820.

A. BANHAM, PENDYFFRYN BRICK WORKS, Conway, wishes to know the PRICE of CHALK, in lump, delivered on board flats at Bristol. FORTY to SIXTY TONS WANTED IMMEDIATELY.

The Terms include the whole of the above, with the use of Drawings, Boards, Squares, &c.—For Prospectuses of the Drawing Classes, apply at the Establishment, 24, Guilford-st, Russell-sq.

The Builder.

VOL. XXI.—No. 1053.

Lancashire and Spitalfields.

HE condition of the Lancashire work-people is most unsatisfactory. The American struggle seems to be no nearer to a close than it was a year ago; and if even this terrible war were at once ended, it is not likely that we should have any immediate sufficient supply of cotton from the Southern States. In the twenty-one Unions in which the chief part of the cotton-manufacture has been carried forward there has been, in the fourteen weeks commencing with the second week of December last, a decrease of pauperism which, by the middle of last month, amounted to 59,720; but unfortunately there has been an increase of pauperism since that time; and it is important to remember that in the third week of March there were in those Union districts 220,050 persons receiving relief from the parish funds; while this multitude is but a part of the number of persons who are here destitute, and depending on the assistance of others for their daily food.

The sums which have been collected will, unless renewed exertions are made, be expended before many weeks have passed, and there will then be no other sufficient resource for this vast number of unemployed people than the poor-rates. Already many parishes are ill able to provide the money which is now needed, and the requirement will be largely increased in amount when the other resources are no longer available. The present position of affairs, in a monetary point of view, requires very careful consideration, not only by the Boards of Guardians of the Unions, but also by the Government and Parliament: the co-operation of all will be required to meet the trouble which is yet to come. Great, however, as is the difficulty in a pecuniary point of view, the forced and continued idleness, as we early said, of so many men and women, youths and girls, is a matter of even more serious import; for it is impossible, let the nature of the people be as good as it may, that this can be continued for any length of time without causing discontent and damage to that independent spirit which has heretofore distinguished the workman. Employment which will keep the minds and fingers busy is almost as necessary to mankind as food; but the puzzling question is, how is profitable work, under the present circumstances, to be obtained?

Emigration on an extensive scale has been suggested by many; and there is no doubt that a large number of the most intelligent of the Lancashire cotton hands would gladly take an opportunity of leaving the present distress, and trying to better their fortunes in distant lands, if it were afforded; but, in the hope of times improving, there is a numerous and influential class connected with the cotton manufacture who are strongly opposed to such plans, which they say would be the means of causing the loss of valuable workers in this branch of our national industry.

Touching emigration, there are several matters to be considered, such as the fitness of those who, for the greater part of their lives, have been accustomed to sedentary employment, for the description of out-door work which is needed in young and rising colonies. Strong, healthy young women, who have some turn for domestic management, would be gladly received in many homes far away over the sea; and the young members of Lancashire families would soon accommodate themselves to the altered conditions, and flourish in the new lands. But we have misgivings about the older hands, both male and female. Still the risk of partial failure in this respect would be but a small drawback from the amount of good that might be expected.

In connexion with emigration, we may mention that notice of motion has been given to the Canadian Assembly, to the effect "That an humble address be presented to the Governor General, praying that he may be graciously pleased to cause to be set apart not less than 500,000 acres of the public lands of this province, fit for settlement, and placed at the disposal of the Imperial Government, for the first settlement thereon of the distressed operatives of the mother-country; and that this House pledges itself to give effect to any legislation that may be required for the purpose of carrying out this resolution."

There is a hope for better days in future for Lancashire; but there is another district for more than two centuries past distinguished as the seat of an important branch of British industry, for which there seems no chance of future improvement,—we mean the silk district of Spitalfields and Bethnal-green, where there exists at the present time a far greater amount of real distress and actual starvation than (thanks to the relief funds) is to be found in the cotton districts. On this point we are convinced by a considerable amount of careful observation. In Spitalfields the distress which exists is intense, and every one, except a part of the silk-weavers themselves, sees that this must get worse instead of better. Years since attention was directed in the *Builder* to this numerous and worthy body of metropolitan workers; we showed how impossible it was that the hand-loom could continue to compete with profit to the weavers with steam machinery; and from time to time since then have felt it a painful duty to note the sure working of a certain social law. In order to compete with more rapid means of production, and with the cheaply wrought but tastefully-designed and well-coloured silks of foreign countries, the hand-loom weavers of East London called in the assistance of their sons and daughters, so that by their united exertions they might produce a weekly sum, barely equal to that which could formerly be earned by a single man or woman alone; and with extraordinary rapidity the Spitalfields weavers have fallen into such a state of distress that the most earnest exertions of a whole family are no longer (in the majority of instances) sufficient to provide the most common necessaries of life. The terrible condition of hundreds of these families can only be rightly conceived by those who have been called to move amongst them.

We look at the state of things which exists here with pity and alarm, for experience of the poorer classes of the metropolis assures us that without a helping hand there must in this district be a large addition made to the pauperism, vice, and crime of London. What is to become of all the young men and women, and boys and girls, who are here left without any present or future chance of working for their bread by that labour to which they have been accustomed? And so crowded are the paths of the various kinds of industry which do not depend particularly on skilled labour, that it is not easy to find an open one.

Already there are considerably more than one thousand inmates in the workhouse of Bethnal-green, and numerous weavers have applied for out-door assistance; for although some of them are in a complete state of starvation and destitution, they have the strongest objection to go with their families into the workhouse. To a certain extent, but only for a limited time, this aid has been allowed in very extreme cases. Some will blame the parish authorities for holding out inducements for perpetual pauperism rather than affording a little present relief but in this and the adjoining parishes the poor-rate is very heavy. Indeed, it would have been far more so if the past winter had been a hard one: as it is, many of those who pay the rates are almost in a state to claim relief themselves. It is, therefore, scarcely possible, under the circumstances, to treat the poor with that kind policy which in many cases would be of future advantage. Thoughts of this, and of what has met the eye in East London, show the necessity for an equalization of the poor-rates throughout all the parishes of the metropolitan districts. But the more particular question now is, what can be done to drag the families of the silk weavers from the pit into which they have fallen? And here, as in Lancashire, emigration suggests itself as a means of meeting the evil to a considerable extent. On a limited scale, and in a great measure by the bounty of a lady who is well known in this neighbourhood for her thoughtful kindness, this has been already successfully tried; and further pecuniary means are only needed to remove those starving people from all the chances of vice and degradation, ill-health or early death, which await them in their present situation. We have faith that, in this land, when the necessity is clearly understood, the generous minds of the possessors of wealth will not leave the means for carrying out such a purpose as we have hinted at unprovided.

There is one great advantage in emigration,—that it removes those who have been for long accustomed to particular pursuits, and from which they are unwilling to turn, even in adverse circumstances, to fresh scenes in which perforce they must direct the energies of both mind and body into fresh channels. The claims of the Lancashire people upon our care must not be overlooked by either the Government or by the public, but at the same time the sad state of the Spitalfields weavers should not be left without consideration; and if funds be raised to assist either of those classes to emigrate, economy in the use of the money will cause a greater amount of good. It might, therefore, be worth while to learn if the Government, without making a grant from the national exchequer, could be of much assistance by using some of the vessels provided for warlike purposes for a time for emigration purposes. We have great fleets upon the sea—huge and brave ships in harbours and dockyards—would it not be easy in a time of peace to spare a few of them to carry the distressed families from Lancashire and Spitalfields, where their labour is not just now in demand, to spots where it is in great request? While we were writing, inquests were held on the bodies of a poor man and poorer woman who died from destitution and fever in Bethnal-green; and evidence was given before Mr. John Humphreys, the coroner, of the awful state of things which exists in this district. The parochial medical officer said as to the house in which the family of the woman lived, twelve in number, it was his belief that if they were not removed at once, the whole of them would die from typhoid fever and starvation!!!

DISCOVERIES IN ROME.

The Church of S. Nicolo in Carcere has been closed for repairs during about seventeen years; but we are assured that the slow advancing works are, at last, near to completion, and that this ancient building amidst the quaint irregular streets near the Tiber, where once stood the Forum Olitorium (or vegetable market), beyond the line of the Servian walls, will be re-opened, restored in a style of splendour, but preserving

its leading features of basilica architecture, within six months hence. All are familiar with the story of the "Roman Daughter," and the prison consecrated into a temple of piety to commemorate the act by which she saved a parent's life,—one example of the reverence entertained for domestic virtue amidst whatever corruption of manners in ancient Rome. But archæologists have destroyed the claims once admitted for a spot supposed to be that story's theatre, the subterranean cell below a temple of the Republican period, included within the St. Nicholas church. That in this celebrated incident the relationship of the personages was different from that generally assumed, and often represented by art, a *mother*, not a *father* and daughter, being the real actors in the scene in which the life of one was saved by nourishment from the other's breast, must be admitted on the credit of the only reliable classic authorities by whom it is mentioned: Pliny, "Hist. Nat.," vii. 36, and Valerius Maximus, L v. c. 4. For the version which presents the subject, more pictorially indeed, as a *father's* life thus saved by a daughter, we have only the less trustworthy report of Solinus, "Polyhist.," and Festus, in "Pietate;" whilst Pliny states distinctly that the temple dedicated to Piety on that prison site (a *sacellum*, or chapel according to Solinus) was, among several edifices, swept away to make room for the theatre begun by Julius Cæsar and finished by Augustus, with dedication to Marcellus. The *other* Temple of Piety being in the immediate vicinity, we may understand how the two became confounded, and one at least positively mistaken for the other by ecclesiastic authorities, amidst the ignorance of Mediæval Rome in regard to all concerning her own antiquities. Till the fifth century of our era, it is supposed, this temple still remained entire; and in the ninth century was raised above its then ruined structure the church known as "St. Nicholas in the Prison," a name expressing the popular tradition,—source, no doubt, of a special privilege possessed by it from the time, it is said, of St. Damasus (who held this cure before becoming pope), namely, that all the prisons in Rome were subject to the jurisdiction of its clergy as pastors of their parochial centre. A benefactor and restorer of this parish church was the Cardinal Borgia, who became Pope Alexander VI.; and in 1599 was built the façade still standing, on an obscure piazza, from the design of Giacomo della Porta. Certain it is, that on this site stood the Temple of Piety, built, or at least founded, A.U.C. 573, in fulfilment of the vow made ten years previously by Acilius Glabro, on occasion of his victory over Antiochus, the Syrian king, at Thermopylæ; but *dedicated* by that conqueror's son, who placed before its front a gilt equestrian statue of his father, mentioned by Livy (l. xl., c. 34), as the first "*statua auratа*" seen in Rome. Earlier, about the end of the fifth century, a temple to Hope, near the same spot, had been dedicated by Attilius Calatinus, who triumphed over the Carthaginians in the year 497, and had twice been consul. This, first restored after a fire in 640, was rebuilt under Augustus, to be dedicated anew, after his death, by Germanicus; and in its extant ruins Canina points out one mutual feature, added on to the Ionic of the primitive building, in style evidently of the Early Imperial period (see *Esposizione Topog. di Roma Antica*). The third of the adjacent temples, here forming one group, was dedicated to Juno Sospita by the Censor Cornelius Cethegus, four years after he had vowed its erection, previously to engaging in battle with the Cisalpine Gauls and Insubrians, in the year of Rome 539. Of this last we have no further record, save in the catalogues of the Regionarics, Victor and Rufus, showing that it still existed, probably entire, about the end of the fourth century of our era.

The first excavations with the object of discovering these ruins under the church by which all these temples had been absorbed, buried beneath modern buildings, were, in 1808, directed by the architect Valadier; and the results led to establishing beyond all doubt the fact that the three fanes had stood parallel from east to west, the central being that to Piety, and of largest dimensions, approached from the Forum Olitorium by fifteen steps, its entire area measuring 105 feet by 50 feet. Surrounded by a Doric peristyle of fluted columns in peperino, with six in double file along the front and back, eleven in single file along each side, it was therefore a hexastyle-pseudodipteros. A portion of the pedestal for the equestrian figure of Acilius Glabro was dug up near its front, so placed that it appeared to have divided the first ten steps of the outer staircase into two branches; and along the remains of a projecting basement or socle, adorning the façade, were found several quadrate niches between pilasters, destined, as Nibby infers, for the bronze tablets of Fasti, here displayed to public view on the Forum. Opposite is supposed to have stood the Columna Lactaria, a pillar at which it was the inhuman practice of Paganism to leave infants exposed for the chance of being taken to nurse by some compassionate stranger. The church of St. Nicholas has arcades and columns, dividing nave and aisles under a flat coppered ceiling, the Corinthian capitals and marble shafts being unequal, and from their irregularity manifestly the spoils of some classic and splendid edifice. We descend into the *confessional*, an elliptic chamber recently constructed below the high altar, and thence pass through a spacious modern vault, under the sanctuary, into a long dark corridor, vaulted in modern brickwork, along each side of which runs a substructure in enormous square blocks of travertine, interrupted at irregular intervals by small quadrate cells, whose walls are of peperino, alike massive; all of the same dimensions; scarcely in any part ruinous, but without inclosure or any remnant of walls in front; and this absence both of masonry and doorways to guard the entrances, certainly does not consist with the theory of *imprisonment* being the destined purpose of these interiors. The old custode, whose one idea on the subject is continually dinged into our ears with repetition of the word, "*carcere, carcere*," improves, indeed, on the favourite version of the "Roman Daughter" story, by converting the *mother* not merely into a *father*, but a senator of Imperial Rome, who was undoubtedly confined here!

The above described travertine structure is surmounted at regular intervals by the basements and shafts of a peperino colonnade, here seen in very imperfect glimpses, the upper part of all the pillars being built up in the church walls above. Hence we pass into two other parallel corridors, each lined, but only along one side, with similar cells constructed in peperino, opening from a projecting front of travertine. At one end of the corridor running southwards we reach a flight of steps, antique, leading to a doorway, and this egress opens on a narrow winding passage now blocked up, at a short distance, by fallen masonry. The walls, each side of this doorway, are reduced to mere rubble-work, without any incrustation of hewn stone; and the custode sagaciously assures us that this mysterious passage leads as far as the basilica of St. Sebastian on the Appian Way, at least three miles distant! A large chamber, in masonry, similar to that of the cells, opens at the end of one corridor; and another, still larger, is now only visible through a gap in the modern walls, completely shut in by the restored vaults under the church's tribune. The shaft and Doric capital of one of the columns, imperfectly seen below, is recognized, half embedded in a niche, after we have returned to the aisle of the church; and opposite, in the southern line of walls, are partly visible some other peperino columns, of which seven may be fully seen from a narrow court external to the building on this side. In another court off the northern side are several fragments of architectural ornament, some in marble, now set into a wall for better display, their rich character in a few instances contrasted with the simplicity distinguishing all else in these ruins. More interesting is what we see after ascending to a platform immediately under the old belfry, where we stand between two files of walls and cornices,—to the north the Temple of Hope, to the south that of Piety, alike built in peperino, one loftier than the other, with cornice better preserved, the details of the egg-moulding still clear, though not unworn by time, with a frieze below, along which are numerous indentures, evidently the holes for nails by which were fastened letters of a vanished inscription. The opposite lower cornice is less perfect and less strongly marked in its relief details. Still higher, ascending to another terrace, we see several courses of the masonry belonging to the Temple of Piety; and these terminate in a broken arch of very massive structure, the complete span of which must have been considerable. Among antiques appropriated to sacred use in the church is a sarcophagus of the finest green porphyry, with two expressive Medusa heads in low relief on each front, this being destined for the relics under the high altar, to be surmounted by a canopy resting on four columns of Oriental alabaster.

The excavations on the height immediately above the Antonine Thermæ are continuing, as has been the case during the last six years; but now, apparently, rather in the object of giving employment to the youths of the reformatory for juvenile culprits located at this old convent than with any expectation of great results. Several brick constructions, in the style of the later imperial period, and a series of parallel arched chambers with entrances walled up, under one wing of the inhabited buildings, attest the foundation of some extensive edifice on this elevated ground. For some time archæologists were at a loss to divine further, still less determine, when the discovery, in '59, of a few words on a water-pipe, proved sufficient to identify beyond doubt:

ABI CHILONIS PRAEF VRB,

explaining the destination of this site for the palace of Fabius Chilo, the Domus Cilonis of the Regionaries, its master having been prefect of Rome, consul in the years 193 and 204, and at one time preceptor of Antoninus Caracalla, who was on the point of sacrificing him, together with the countless other victims put to death after the murder of Geta, as suspected friends of that higher victim. Some of the brickwork ruins have been swept away since the discovery here; and we were sorry to observe the dilapidation of a more important structure in their vicinity, described and engraved in Sir Wm. Gell's "Topography of Rome;"—a remnant of the Servian fortifications against the declivity on which this convent stands now built into the inclosure wall on the side overlooking the valley between this and the Palatine Hill. Only two courses, in large squared blocks of volcanic Alban stone, are left—considerably less than appears in Gell's pages.

Some time ago a proprietor of enterprise in such undertakings, Signor Guidi, began other excavations not far from this spot, immediately below the southern end of the Antonine Thermæ, outside the great inclosed area of those ruins, though within the quadrangle of porticoes and chambers once surrounding them,—now, indeed, almost entirely lost save on one side. Two stories of subterranean halls, apparently independent of the Baths, and belonging to some splendid residence, were here uncovered (for the most part within the last few weeks), both having pavements in black and white mosaic, of gracefully-designed floral and foliage subjects, but without figures or other representations. The walls are covered with colour, mostly deep red, divided by quadrate borders of different tints; and within these compartments are figures, some well preserved, others scarce traceable. Most of the mosaic pavement has fallen in from the upper story, encumbering the floor below, to which we can only descend by a ladder, no staircase remaining. But the principal extent of halls is still subterranean, there being in this part but one story under the ground cultivated as a garden immediately above. Here the wall paintings are more perfect, and cover almost the entire surface; but as they became inaccessible, owing to the influx of water from an inundation of the Tiber, shortly after their recent discovery, and the works have been in consequence suspended, we are unable to supply fuller report as to these interiors in their present state.

The activity within the sphere of sacred archæologic pursuits and research for their illustration under the present pontificate has demanded a special record of results; and this desideratum is promised satisfaction, with all possible advantages of intelligent interpretation, by a monthly issue from the pen of Di Rossi, first among living authorities on Christian antiquity in Rome. His "*Bulletino di Archeologia Cristiana*" began its welcome career last January, in pamphlet form of ample contents, with facsimile epigraphs and outline engravings occasionally interspersed over the text, and has hitherto proved indeed worthy of its distinguished editor. The first number gives a full account of the discoveries under his direction in the Catacombs on the Appian Way, begun in 1848, and resulting, two years later, in the opening of a crypt, at the foot of its ancient staircase, adorned by paintings, among the most important yet found in these Christian hypogees; also, the opening, in 1857, of another crypt belonging to the catacombs of Pratextatus, whose vaulted roof is covered with paintings of much beauty, ascribable, as here shown, to the period of the Antonine Emperors. The second number reports with full details on the subterranean church of S. Clemente, and its interesting archaic contents, some of its paintings being ascribed by Di Rossi to the ninth, others to the tenth and the latter years of the eleventh century. Elsewhere are described the frescoes lately found in the most ancient section of the S. Lorenzo basilica: the Virgin and Child, and the figures of five male and five female saints in this grouping, are allowed claims to antiquity at least as high as the tenth century. Besides this new periodical we have the Bulletin of the

Archæological Institute, conducted by the Germans, to whom that association pertains; also monthly, and very well compiled, but rather appropriated to classic than sacred antiquity; nor is there any other regular report of archæological researches in Rome save at the sessions of *Accademie*—amidst which deficiencies we have the greater reason to hail with pleasure the undertaking of Di Rossi.

The site of the ancient Aricia, but the highest point of which is occupied by the modern village of that name, is now being excavated by Signor Fortunati, to whose exploring energies we owe the discovery of the beautifully-painted tombs and the St. Stephen basilica, on the Latin Way. A private society for excavating purposes has lately found the remains of an antique villa on the Campagna, near a village named Prima Porta, on the Tiber; and close to the little port on that river, within the city, was recently disinterred a pedestal bearing the dedication, *Divo Antonino*.

Casts from all the reliefs referring to Trajan, on the Arch of Constantine, have been executed for the Emperor of France; and, thus reproduced, these noble sculptures may be far better appreciated.

THE ARCHITECTURAL EXHIBITION.

Continuing our notice, we come to a work by Mr. E. C. Robins, a "Design for the Ornamentation of Lambeth Bridge" (191). Two octagonal turrets on each pier, Gothic and "Perpendicular" in character, with pyramidal cappings, balconies, and panelling, and an ornamental railing, constitute the design, which, though calculated to improve the appearance of the bridge, has too much of the character of masonry, for work which would probably be executed in iron. Amongst several works by Mr. I'Anson, that have added something of value to the architecture of the City, we find illustrated in the Exhibition, the building No. 83, Lombard-street (272), that adjoins his Colonial Assurance Office, which latter is illustrated in the same drawing (276) with the Colonial Chambers, Fenchurch-street; the Royal Exchange Buildings, Cornhill; and the Argus Life Office, Pall-mall. The newer building in Lombard-street is a narrow and lofty pile, harmonizing in general character, and in the main lines, with the work next to it, yet plainly a different building. The lower story, which is a shop, presents a simple elliptical arch of polished red granite, and piers; the principal stories above, have the piers between the windows and at the angles finished with capitals; a peculiar balcony projects from a window in one story; and forming the top story, is an open loggia. Above the cornice is a dormer window, decoratively treated, and a Mansard roof. This work is very suggestive in a town like London, where narrow fronts are the rule, and horizontal cornices as terminations are usually ill-managed. The Colonial Chambers design is suggestive of architecture that may be made consistent with use of large surfaces of glass; whilst the Corn Exchange Chambers, Seething-lane (138), are remarkable in London for the attention paid to grouping of the windows, and the manner in which with the help of shields on the central piers, an appearance of symmetry is given, notwithstanding that the entrance doorway is out of the centre. Amongst the other drawings of London buildings which we have not been able to mention, are those of Mr. Morgan's barracks now nearly completed at Chelsea, near the Suspension Bridge, for the Guards (209, 210). The frame containing a plan is so badly hung, that we are not able to make out many of its features; so, we cannot tell whether the solutions of several problems discussed in our pages on the occasion of the original competition, have been made by a civil architect. We see however that each barrack-room is lighted by windows on opposite sides, causing the great length of the main building; but there are many blocks detached on the further side of the parade, and not seen from the road. The front range of building has well-arranged masses, but there is less taste in the management of the details of coloured materials; and the flanking turrets of the centre of the front are terminated very abruptly; and the whole front suffers in consequence. The "New Building in Paternoster-row, for Messrs. Longman," is shown in a drawing (286) by Messrs. J. Griffith & H. Dawson. Certain details, such as the chamfering to the architraves, we would rather have had different; but the work generally, deserved to be seen under better circumstances of site, than those of "the Row." Mr. Owen Jones contributes elevations of three of his buildings, including St. James's Hall, the Piccadilly front (323), the "Garden Front, No. 3, Kensington Palace Gardens" (333), and "Messrs. Osler's House, Oxford-street" (336), and eight of his original drawings for the Victoria Psalter (357 and 365). Mr. C. J. Richardson exhibits a view of "Queen's Gate Lodge, Hyde Park" (326). The portico has columns at the angles, coupled: one column of each pair is rusticated with blocks, whilst the other has the shaft plain. The effect is not good: a square pier for the angle, or one broad on the face, or an end of the wall with an *anta*, would any one of them have been better. The interior of a "New Music Hall to be erected in London," from the designs of Mr. H. H. Collins, is shown in No. 329. It will be remarkable as having two tiers of galleries, the upper tier apparently being formed into private boxes. Mr. J. W. Papworth's "Alternative Sketches for a School with Teacher's Dwellings" (111), Gothic, are less pleasing in appearance than his "Preliminary Sketch for a Pair of Houses at Kensington" (113), and his "Additions and Alterations at Streatham" (126); though the window-heads in one of these, might have been advantageously left without chamfering, and the finials could not stand as they are shown. The cornice (with *chenau*), and the dormer-window, are however managed in a manner to make the whole design productive of considerable effect.

Mr. Lamb's works (Nos. 155, 159, 160, 164, 165, 169, 170), whereof we have already referred to a design shown in one small sketch, include drawings of churches, schools, mansions, cottages, stables, and other buildings, besides studies. Most of the works are remarkable for a considerable amount of design, both in details and grouping. In some of the number however, as in the "New Wing, Nun Appleton, near Tadcaster," *repose* is lacking, and from the very quantity of detail in brickwork, that has been introduced. His "Aldwork Manor House," near York, in the same material, is more pleasing. The Ball-room at Montreal, Seven Oaks, is characterized by an arrangement of four segmental-arched trussed ribs, supporting the ceiling, and dividing it into nine equal compartments,—the room being square in plan. The compartments at the angles again are divided diagonally, by less prominent mouldings; so that there is an octagon within the square of the whole ceiling. The centre one of the nine compartments is made the most ornamental. Much might be got out of such an idea for a ceiling. In the Assembly Room of the Town Hall, Berkhampstead, a building Gothic in style, and very suitable in character for the chief public building of a small town, — the side compartments of the span of the ceiling, which are flat, are divided by spandril brackets, or cantilevers, to the tie-beam; but the middle compartments take the form of a waggon-headed vault; thus useful addition of height to a low room is got out of the space between the queen-posts, and novel and decorative character are made to result. One of the best of the designs, is one for the "Principal Entrance for the Public Garden, Oporto, to be erected." This work is Italian, and ornate in character, in both respects differing from the majority of the designs. Amongst Mr. Lamb's studies is one for an arrangement of window, novel and adapted to his variation of Domestic Gothic architecture. It is divided by a transom; but there is no mullion, except in the upper half of the window. The transom in fact takes partly the form of a low four-centred arch to the lower half, which is filled in with a sash. By the arrangement, there is no impediment to leaning out from the window, or to view of the country; and it has evidently become a favourite arrangement with its author. But we apprehend that the window would not open at the top. Now that it is generally felt that rooms cannot be ventilated unless the windows open both at top and bottom, a recurrence to the old system of hanging the lower sash only, cannot be viewed favourably.

A view of the interior of the Oxford Corn Exchange (271) is exhibited by Mr. S. L. Seckham. The most prominent feature, besides the open roof, is a gallery which is carried on segmental arches that spring from corbels, and from which depend the globular lights. Red, yellow, and black brickwork in piers, and some Gothic details, give the general character. The slopes of the roof up to the queen-posts are glazed; whilst a *plafond* or ceiling is formed on the collar, divided into panels, and having the chief parts enriched with colour.

A view (192) of the hotel which is in course of erection at Brighton, in the King's-road, for a company, is shown by the architect, Mr. John Whichcord, who we can hardly say has made the design very effective, or overcome the difficulty of combining verandahs and balconies with details of the structure itself. These latter are Italian, so far as they can be described. The building will have considerable height, there being six stories of balconies above the ground-line, or level of the esplanade, besides stories in end portions of the building, forming towers or pavilions; and there is a frontage on the beach to a story below the esplanade.

Efforts continue to be made to combine the use of coloured materials with Pointed arches and details more or less Gothic; but there is little mitigation of the harshness of the colours and forms that has so long characterized the attempts. Drawings indeed generally show the red, black, and blue, much too glaring, even taking the building as seen when new; and smoky atmosphere obscures the effect of brickwork even, with great rapidity. But judging from designs and works, the idea seems to prevail that arches need only be pointed, and black and colour in archivolts and courses, only introduced, to make *ipso facto* good architecture. Some of the works to be seen now-a-days, and for which we hardly know whether we ought to credit the copyism of Italian Gothic, or sheer want of art-feeling, would have been discreditable in the worst days of "Carpenters' Gothic," or of thirty to forty years ago. We will not name the worst of the productions which are in the Exhibition, that justify these observations; but one that we have in mind, is the case of a building in a very prominent position in London. If it should be said, as lately by some, that there is nothing in the form itself of the pointed arch, to recommend it, or not, we have more than doubt whether a form that is almost that of a lancet, should be used in a building having several stories, when the form has no office beyond what would be attained by that of a relieving arch of less rise, and beyond the framing-in of a space filled with red and black brickwork, or tiles, innocent of any beautiful or remarkable feature of interlacement or pattern. Much work of this class seems lately to have been produced in the northern and midland manufacturing towns; and doubtless, that has been with a view of answering to the demand for something that might not be discoloured by smoke. If any one will look, however, at the effect of decorative brick buildings in London that may have been admired at the time of their erection, and have had but half-a-dozen years' life and exposure, he may be surprised at the slight evidence that they afford of any very surpassing advantages of brick, as the material generally is and when applied decoratively. Glazed surfaces, if used, are the only parts that retain their pristine freshness: so that in point of fact, the original balance is destroyed; the contrast between the clean and the blackened surfaces becomes yearly greater and greater; and the building looks dirtier than otherwise it would. It would not be within the scope of the notice of an exhibition, to seek a remedy for this condition of things: the question of smoke-nuisance is forcing itself into recollection continually, and when we are treating many subjects: we here content ourselves in reiterating that it is almost hopeless to look for good art in architecture, so long as the nuisance continues, and in saying that the recourse to brickwork by no means purchases immunity from the difficulty. The subject arises in connexion with the Architectural Exhibition, only because of the evidence which the display of drawings in Conduit-street annually affords, not merely of partial failure in intended effect, such as we have spoken of, but also of prejudicial results on the art of those who, responding to such demands as we have seen expressed by newspaper writers and others who have supposed architects to be blind to the capabilities of brick, make great display of the coloured materials. In Birmingham especially, some of the architects are frequently aiming at effects through the medium of these materials, with Gothic details, and in buildings in the principal streets of the town. A drawing of a structure of the class at Birmingham, an ironmonger's shop, erected from his designs, is exhibited by Mr. J. G. Bland (289). It has some good features, but with them are others meant to be Gothic, which are harsh and objectionable. Such are the forms of the heads of the windows,—albeit here, curves with centres below the line of springing, and not lancet arches, are used. Whether the resultant effect be due to want of harmony with other and what is general street-architecture, we cannot exactly determine: but those who are making like attempts with this kind of materials, should be told that they have not yet succeeded in affording a sufficient substitute for stone, or the art which is demanded in architecture. The architect above named, exhibits a drawing (133) of another

building, but in a different style, in the same town, "The Gold Pen Manufactory," erected for Mr. Wiley. Altogether, in it, there is such an amount of work attempted by colour, or recesses and projections of brickwork, that we are offended when we come to the sky-line, and find a want of symmetry between one of the two pyramidal roof-capped towers, and a portion of an attic story, with tall chimney, in the same front. There are merits, however, that call for recognition, in the use of the arch-headed recesses in which the windows are placed, and in the treatment of the upper portion of the building as an arcade enclosing two tiers of coupled window-lights.

Several designs, all Gothic, and having a strong family likeness, are shown by Mr. J. P. Jones. Defects in them, are not of the style, and ought to be corrected, for the realization of full value from the features which the architect shows he can design. We apprehend it is a defect, as in the building in Essex (exact site not stated in the catalogue) to plunge a clock-tower into the angle of a structure, or without either corbelling, or lines rising from the ground. In the same work (drawing No. 65) a want of symmetry seems to be expressly designed. One half of the structure has an arcade on the ground story: the other half has no such feature; but has a loggia in the story above ground. These things *may be* right; but they are not according to teaching when we were young, and not yet abandoned. It is difficult, nay impossible, whilst undesirable, to put into words, rules for everything; but there must be something capable of enunciation on this matter of symmetry, to tranquillize the minds of perverts or of those who only may become such. The modern practice of providing for a multitude of objects or occupations in one building, however, creates great difficulty, and has no doubt tended to prevalence of a style in which want of the *classic* symmetry has not been thought a disadvantage. The present design seems from the title, to include more than one institution, besides an important residence. The "Proposed Municipal Offices for Stockport" (308) by the same hand, are better, because having at least a symmetrical arrangement of centre and wings, which the contrary treatment of the ground story does not overcome. The ends of the roof are carried up in the manner of pavilion roofs; but the architect appears to prefer with such roofs, the arrangement of an unbroken front, and the omission of lines rising from the ground. We would only say, we hope there are reasons for such variations, at least in the architect's own mind, other than the mere desire of doing differently. The same architect, contributes one to the large number of towers, which,—erected as memorials, or in market-places, where they carry a clock and bell,—have now sufficient resemblance to constitute a class in the buildings of this second half of the century. The design now before us, which, though plain, is not the worse for that, is for the "Albert Tower, to be erected near Eastbourne" (273). The "Prince Consort Memorial Design for Clock Tower, at Hastings" (68), by Mr. R. O. Harris, is of the same family: but the design, so far as we can see the drawing, appears more elaborate in its coloured brickwork, and its stone lantern. A design for a memorial to the late Prince, by a different hand (69), is not a favourable presentation of the obelisk form of monument. In this case, the base is surrounded by columns, each of the four fronts being concave on plan. Neither is another architect successful in a different treatment of the obelisk form, in a design (335) for a different memorial, in banding the obelisk (here made octagonal on plan), with horizontal red lines, no doubt of brick. There is much to be said on both sides of the question of the use of the obelisk form; but, should assent be given to the use, the æsthetic principle, as well as the structural, of the single stone, would be found correct. The pedestal in this design has Gothic details; a second design (207), by the same architect, is Classical.

Another article will conclude our series of notices of the drawings in this Exhibition.

ON MEDIÆVAL STUDIES IN PALESTINE.

A lecture on the above subject was delivered on Tuesday evening last in the Theatre of the South Kensington Museum, before the members of the Architectural Museum, by Mr. G. J. Wigley. He said that the latest illustrations of the interesting subject on which he was about to address them were the complete set of photographs by Salzmann, taken in the year 1854, during his (Mr. Wigley's) sojourn in the Holy Land, and which were afterwards publicly exhibited at the Crystal Palace. There was also a very beautiful set of photographs of some interesting Mediæval monuments in Palestine, taken by Mr. F. Bedford, who accompanied the Prince of Wales on his tour through the East, and which were then in the room. There was at the present day quite a constellation of authors who had written, not only about the Holy Land, but more particularly about the remains of ancient architecture which were scattered over it. Amongst these the work by the Rev. George Williams, of King's College, Cambridge, entitled, "The Holy City," was especially worthy of being noticed as containing a description of some of the Mediæval monuments in Palestine which possessed the greatest amount of interest for the student, the architect, and the antiquary. The crowning work, however, upon the Mediæval architecture of the Holy Land, was undoubtedly that of his (the lecturer's) fellow-traveller, Melchior de Vogüé; and the present lecture would be more or less a review of portions of that able and instructive work. First as to the architectural importance of the Holy Land. People who were not well acquainted with the subject were under the impression that it contained a great many ruins, but was a country that was of very little importance, architecturally speaking. That was a great mistake. It was in the Holy Land that the Christian school of architecture was first developed. From the time that our countrywoman, the Empress St. Helena, visited the Holy Places, in the beginning of the fourth century, until the conquest of Syria by the Mahommedans in the beginning of the seventh century, the Holy Land was jewelled all over with Christian churches; and if but few of them, comparatively speaking, were remaining, it was because the power of destruction possessed by the Turks was greater than the power of construction possessed by the Christians. At Bethlehem, the birthplace of our blessed Lord, there still stood a basilica, containing vestibule, transept, nave, and double aisles on both sides, with columns. An able writer attributed the basilica to Justinian; but on comparing the masonry, the style, and the details with the well-known church of Justinian at Jerusalem, there could be no doubt that the basilica of Bethlehem must be attributed to a much earlier period, and most probably, as was the almost universal opinion, to the reign of Constantine. The basilica possessed all the most admired features of the Roman school, with others which were peculiar to itself. Its columns were of the red marble found in that country. The length of the church was about 200 feet; and an additional proof as to the time of its construction was furnished by its straight cornice supported by columns, as was common in the time of Constantine, and not by arches, as in the time of Justinian. The basilica had been adorned in many parts with mosaics by Greek artists. The roof was originally open, as in the case of the basilicas at Rome. The roof had, however, been frequently renewed, the last time with the assistance of Edward IV. of England, who furnished the lead for the purpose, the Duke of Burgundy paying the residue of the expenses. The lead had long since gone into the melting-pot to make bullets for the Turks. It was last repaired in the year 1842. This was the first and earliest Christian monument in the Holy Land, and perhaps in the world. Of all the objects which are invested with a great amount of attraction for European travellers in the Holy Land, the foremost is the Holy Sepulchre. There was much reliable information extant as to the different churches that were raised on its site or in its immediate vicinity. It was stated by Eusebius that Constantine built there a large basilica, very much of the same charcter doubtless as that erected at Bethlehem. It had, according to him, double aisles on both sides, and also a magnificent gallery over those aisles, of which the triforiums in our cathedrals represent a feature, but on a very small scale. According to generally received opinion, the Holy Sepulchre must have been in the very centre of the basilica of Constantine. The basilica was destroyed in the seventh century. It was repaired subsequently, but with very much less means than Constantine could have devoted to the purpose, or than were necessary for its restoration; but it is believed that the semicircle marked out by the apse of the basilica was made into a circle in the reconstruction of the building. The first basilica is spoken of by Antoninus, of Piacenza, as having had its altar in front of the Holy Sepulchre; so that the latter was not left in a kind of churchyard, an opinion which some persons entertained. Such was its position at the time of Constantine, and for some centuries afterwards. After the destruction of the building in the seventh century, the Holy Sepulchre became the centre of a group of detached chapels, covering different sanctuaries. They were the small chapel over Calvary; the rotunda over the Holy Sepulchre; the little church of St. Helena, stretching out at a much lower level, and several others. So they continued until the eleventh century; but in the year 1010 many of the churches of Palestine were destroyed by order of the Caliph Hakem. The churches of the Holy Sepulchre were, however, afterwards restored very much to their former state. On the arrival of the Crusaders in 1099, the several churches underwent a complete renovation. The Crusaders did not destroy anything they found: on the contrary, they restored and completed that which had been wholly or partially destroyed. They used the rotunda of the Holy Sepulchre as the nave of their new church, and added a sanctuary and transept, which it might well be conjectured occupied the position of the nave and aisles of the basilica of Constantine. The Holy Sepulchre stood at the west end of the present church; and there was good reason for that arrangement. When Constantine built the church there, the whole of the rocks which surrounded the hill of Calvary, and the rock in the flank of which the Holy Sepulchre had been cut, after the fashion of Jewish sepulchres, was almost all carved away; and the Holy Sepulchre, in fact, remained merely as a shell of rock; and it was impossible that the excavation could have been carried farther westward for the purpose of placing the nave and aisles in that direction, as the level would have been much higher than the sanctuary itself. For these reasons the great body of the basilica of Constantine and of the present buildings was placed to the east of the Holy Sepulchre. The style of the church built there by the Crusaders corresponded with the European style of that date. It is conjectured to have been opened about the year 1140, and it possesses all the characteristics of the Romanesque style of that period, more particularly as it was adopted in the erection of French churches. It had, however, a marked characteristic, which distinguished it from the churches of Europe, namely, that its arches were pointed. This example of the pointed arch was not by any means unique, as pointed arches were to be found in almost all the churches of Palestine, even in those which were built at a very much earlier period than the time of the introduction of the pointed arch into Europe. There were, he believed, only two churches in Syria and Palestine in which semicircular arches were to be found; but in these cases pointed arches were also to be found. At the time of the Crusaders the pointed arch was universally used throughout the East; numerous instances of it were to be found, for instance, in the mosques of Damascus and Cairo. The Crusaders adopted the prevailing fashion, and in the carrying of it out they employed the workmen of the country; nor did they confine their adoption of the style of the country to the pointed arch; they extended it also to numerous details of ornamentation. On this subject of the pointed arch he was somewhat at variance with his author, M. Melchior de Vogüé, who evidenced in his work in this respect a little feeling of nationality, and had a leaning towards the Gothic of France, and he took him (the lecturer) to task for asserting that the Pointed architecture of the twelfth century proceeded from the Holy Land. It was admitted in the volume that all the buildings erected by the Crusaders had pointed arches throughout, but it was asserted that the pointed arch existed partially, at least, throughout Europe at the same period, and that even if it had not existed at all in the Holy Land, it would have grown up in Europe as it has done. It was much to be doubted whether facts warrant such a conclusion. The churches of the East built at the commencement of the twelfth century were filled with pointed arches,—in a whole series of churches to the number of sixty, that existed still of the time of the Crusades, they were to be found. At that period the attention of Europe was directed to the Holy Land, and the result was the introduction, to some extent at least, of Eastern customs, policy, and laws, and he (the lecturer) had also come to the conclusion that it resulted also in the adoption throughout Europe of the pointed arch. He was aware that the Gothic style, so far as it could be called a style, was chiefly made up from the Romanesque school. Its plans, arrangement, and outlines certainly proceeded from that school; but it seemed to have received from the Holy Land its finishing touch and impulse, namely, the pointed arch. The church of the Holy Sepulchre was not the only example of Mediæval architecture in Jerusalem. Count Beugnot mentioned in his work on the Assizes of Jerusalem that he found amongst the MS. of a French

library records of no less than twenty churches built by the Crusaders in Jerusalem, and the whole or portions of each of them could still be identified. The next in point of importance to that of the Holy Sepulchre was the Church of St. Anne, at the north-eastern extremity of Jerusalem. It is supposed to have been built very soon after the Church of the Holy Sepulchre, and is 120 feet long by 60 feet wide, the centre nave being 24 feet, and the aisles 18 feet wide. It had no triforium, which hardly existed in the case of any church of the twelfth century throughout the Holy Land. The vaulting was groined without ribs—with plain waggon vault in its transepts. It was only towards the end of the twelfth century that ribs were introduced in vaulting. Over the centre of the transept the church was lighted by a cupola. The cupola was to be found in many of the churches of the East; it was borrowed from the Arabs, and afterwards introduced into southern Europe. The adoption of terraced roofs allowed the architects to treat their space much more agreeably than was found to be the case in the churches of the West. It was seldom that any sign of a belfry was to be found. In the Church of St. Anne a tower or minaret now existed, which did not form part of the original structure. It was, in fact, built in the year 1842, while the church was used as a mosque. He was happy to say that it had ceased to be a mosque, as in the year 1856 it was presented by the Sultan to the Emperor of the French, and it was likely soon to resume its character as a Christian church. A French architect had been sent out with a view to its restoration, and it was to be hoped he would treat it in a conscientious manner, so that in truth it would be a complete restoration. After the Church of St. Anne, the building that attracted especial notice from all European visitors in Jerusalem was all that now stood of the Great Knights' Hospital of St. John. He regretted to say that very little remained of it. The church which was originally attached to it was nearly destroyed. There were a few arches still to be seen, but they were disfigured by being not only the ruins of a Christian church, but also of a mosque, into which it had been turned. The space occupied by the Great Hospital stretched right into the town. It now looked like a field covered with grass, which covered arches and architectural remains. The hospital was a large square double-storied cloister, around which the buildings extended; the entire occupying a very considerable area. It is said by historians to have afforded accommodation to 2,000 sick persons and to 400 knights. The only striking architectural features to be seen at present of the Great Hospital were a series of five or six arches that now formed a part of one of the streets of the bazaar, and also some curious arches, evidently belonging to the Great Hospital, but now forming a part of the little Greek church, called the Church of St. John the Baptist, which was erected, as the Greeks contend, on the spot where the town house of Zacharias stood. The Church of St. Mary the Great, so called to distinguish it from another church, called the Church of St. Mary the Less, is supposed to have been built by the community from which the Knights of St. John ultimately arose. Towards the beginning of the eleventh century, certain merchants of the town of Amalfi, in the kingdom of Naples, who were in a very prosperous position, rebuilt the hospital close to the Church of the Holy Sepulchre, and called it the Church of St. Mary the Latin. They built also a place of residence for female pilgrims, which was in the hands of a community at the end of the twelfth century. There still remains part of the north wall, and also of the cloister adjoining it, though it has been very much altered in character by the repairs which, from time to time, it underwent. The peculiar characteristic of that church, by which it is distinguished from the Church of St. Anne, is that, although the greater number of its arches were pointed, the side window on the north side, as well as the doorway, were semi-circular, and it also displayed a greater amount of ornamentation than any of the other churches of Jerusalem. The Church of St. Mary the Latin, which stood in the immediate vicinity of the Holy Sepulchre, consisted of a single nave and apse, of very plain kind of architecture, but not at all uncommon in the Holy Land. This was the case of one of the earliest churches in Jerusalem, where, according to local traditions, the faithful met, on the spot on which it stands, in the time of the Apostles — the church of St. John Mark. The word "basilica" included not only buildings used for public purposes, such as halls of justice, but it was also applied to the chief hall in Roman mansions, a fact which seemed to be forgotten when the basilica was spoken of as the type of all Christian churches in the East and throughout Christendom. The development of the type was mistaken for the type itself. At the outset of Christianity public worship was conducted in the houses of Christians. Afterwards, as the numbers increased, single-nave churches were built; and they were still to be found in many parts of the Holy Land and the East. With respect to the buildings which occupied the Temple area, very little remained to mark their use as Christian churches. The Church of the Presentation of Our Blessed Lady, erected by Justinian, consists at present of a nave and no less than three aisles on each side. Two hospitals were added to the church, which may be believed to have occupied the space of the two aisles erected by the Mahomedans since. The ruins of the hospitals probably suggested the erection of the two additional aisles. In the north-east part of the town stand the remains of a very interesting church, that of St. Mary Magdalene. It was very much like the Church of St. Anne, and was especially plain and without any display of ornamentation. It had the additional feature of a more prolonged choir, and also shows some remains of wall painting. In the same part of the town the remains of several small twelfth-century churches are to be found. Amongst them the Church of St. Peter, now a mosque, and also a tiny church about 20 feet square, but which, notwithstanding its diminutive size, contains nave and aisles, and all the features of a Mediæval church. It is said by the Greeks to have been erected on the spot where the Blessed Virgin was born. M. de Vogüé's volume contained not only a full and most interesting description of the churches inside, but also of those outside Jerusalem; as, for instance, the church which stood on the spot from which our Lord ascended, and full detail and accurate drawings of the churches are given. Following the Crusaders to Cyprus, most interesting remains of Mediæval architecture would be found there, in which the Eastern character was less mingled with European features. There were in Nicosia and Famagosta several examples of the churches of the thirteenth century, and also remains of the monastery of Lapais, containing cloister, refectory, with stone pulpit for the reader, chapel—consisting of nave and aisles—all most completely built. To this building there is a local tradition attached, to the effect that our blessed Lord resided there for some time. Very few buildings of a later date than the thirteenth century were to be found in Cyprus. The cathedral of St. Sophia at Nicosia was a magnificent specimen of European architecture. In Rhodes many remains of the architecture of the fourteenth century were to be found, not scattered at considerable distances from each other, but grouped in the immediate vicinity of the quarter where the knights resided. The Mahomedans have altered very little; they built very little, but what they found they allowed to remain as they found it. The Grand Hospital of the Knights consists of a large quadrangle with double cloister, beyond which is the street in which the knights lived. At the lower part of the street, which is paved with white marble, an interesting church—now used as a mosque—was to be found. It was dedicated to St. Catherine, and is in good preservation. The Priories of England, France, Spain, Portugal, &c., are also to be found in the same street, as well as the great Church of St. John, which was a very stately structure, although not so considerable as was afterwards erected by the knights in Malta. It was of Italian Gothic style, while the greater number of other churches were of French Gothic. The roof was open and plain. Unfortunately it and the buildings in the vicinity have recently been very much damaged by the explosion of several barrels of gunpowder, which had been stored in it by the Turks. Some of the old fifteenth century guns were still to be found standing on the ramparts, and he (the lecturer) saw, covering the touch-hole of one of them, a piece of a breast-plate which had been used during the last siege.

He had endeavoured to give some idea of the extensive and interesting architectural remains which were to be found in Palestine, Cyprus, Rhodes, &c., whereon the Crusaders settled. In a single lecture the subject could only be touched on; but if he had created in any of his hearers a desire to pursue the study, the end which he had in view would be accomplished.

Mr. Gilbert Scott said that the Mediæval monuments of the East furnished a most interesting subject of study, which would enable the student to see what Christian churches were from the introduction of Christianity, and how, at a later age, the architecture of the West acted upon that of the East; and also the manner in which that of the East reflected in its turn upon the architecture of the West. They would also see how both were affected and in part supplanted by contemporaneous Mahomedan architecture. The subject afforded ample scope for research—as to the identity of the Sacred Sites, and as to how far the pointed arch was the result of the natural development of the architecture of the West, or whether it was in any degree, and if so, in what degree, derived from the East. These and other branches of inquiry hung upon the subject which Mr. Wigley had ably treated, and he hoped that on some future occasion he would follow up the general facts he had laid before them in so interesting a manner, by dealing with some of the questions arising out of it, in detail.

A vote of thanks to the lecturer terminated the proceedings.

SOCIETY OF BRITISH ARTISTS.

ALL who have been accustomed to pay their annual visit to Suffolk-street, will look for their old favourites, and will be glad to find the President of the Society, Mr. F. Y. Hurlstone, giving, with little apparent labour, continued proofs of his ripened skill and talent. It may be supposed he has seen many such a dusky-complexioned coquette as he here presents to us in (207) "At Seville," with a thorough appreciation of the picturesque attitude and *physique* of the model; in this, as in (444) "Mezza Jorno," and (460) "Boy with Lamb," two powerful sketches, his innate taste for colour is convincingly pronounced. Mr. W. Salter, too, relies more upon colour than form, and deserves credit for the judgment with which he has selected his subject (196), "The Interview which took place at the Village of Caversham, near Reading, between King Charles I. and his three younger Children, the Duke of York, Duke of Gloucester, and the Princess Elizabeth, in the presence of Cromwell," and if he do indulge in a little latitude occasionally, it is not beyond the restriction of possibility, as in this case. Cromwell *might* have been a witness of the king's tenderness for his young, innocent, helpless children, and if the circumstance be somewhat apocryphal, we give Mr. Salter the benefit of the doubt. Hitherto Mr. Baxter has enjoyed a monopoly in his peculiarly fascinating adaptations from rural nature: so pearly and peachy-skinned is his ideal, that she must live in an atmosphere of her own, where the dew is kalydor; and in a neighbourhood where all feminine babes are born with a metaphorical parasol in their mouths, as well as the proverbial silver spoon with which they are nourished upon a normal aliment of strawberries and cream! This year only one of his agreeable creations graces the rooms, and this (51) "The Ballad" is not one of his best; so that Mr. J. J. Hill, who appears resolved to try a race with him for the possession of that same parasol and silver spoon, finds the running easier than he sometimes may do, and wins by a neck and shoulders, to say nothing of the pretty head that tops them under conditions,—to carry the figure a little further (and the artist does no more),—that leave identity more to the name than the colour of the painter: *vide* (491), "Contentment." Another exceedingly pretty work of his is (74), "Spring." Prettiness seems the chief end in view of Mr. E. J. Cobbett also, in (108), "Fern Gatherers," and the many other of his agreeable presentments of cleverly painted, cleanly washed children. (38) "The Proposal," by the same, shows that the nicety with which he finishes the draperies of ragged home-spun that clad his gleaners, is equally effective when employed upon other materials. The lady's head is not agreeable. Mr. Henzell, who may be classed with Mr. Cobbett as a delineator of peasant life, and with him leading the van of an innumerable retinue, sufficiently distinguishes himself by the interest with which he manages to invest (43), "Feeding the Calves," and similar little domestic incidents. More popular still is the speciality of Mr. W. Hemsley, because in addition to his manipulative skill, his emulation of the old Dutchmen extends to a considerable comprehension of humorous expression. (602), "A duet" is an admirable example of this. Mr. T. Roberts belongs to the same school, only, with the preference of truth to affectation which characterises it, he differs in selecting the more pathetic phases of every-day life, seldom using much above common-place. However, he manages to propound a moral worthy of recollection in (87), "Reading the Scriptures," and the good young lady so earnest in her solicitude for the poor cottager's mental comfort, is a fair type of those,—and there are

many of them!—who command the respectful admiration of all.

Of an almost extinct category, alas! Mr. J. Noble's "Incident from Mr. Pepys's Diary, 1662" (26), is satisfactory enough to excite regret for its decline, although like Mr. D. Pasmore's Alchymist (75), "The Elixir of Love," it scarcely exceeds a suggestion of something much better; and were it not for a far more appealing exponent, we should scarcely have had to refer to it. For this we have the pleasure of bowing our congratulations and grateful acknowledgments to Miss Edwards, who appropriately assists us in elucidating the capability of even old, worn materials being made acceptable by novel treatment. (407) "Catharine Glover and the Glee Maiden attempting to succour the imprisoned Duke of Rothsay: — Fair Maid of Perth," might be an extract from many an old catalogue, and numerous illustrations of the subject occur to a very general memory; but the strict propriety of costume and the elegance of the composition and production, with considerable brilliancy of colour, render it a very attractive performance, indeed, upholding classic romance as an inexhaustible source, at a time when a hat and bonnet, black coat and bo-peep fever promise to shut it up quite. To that dream-land of which Mr. A. J. Woolmer is the avowed "*genius loci*"—

"And *makes* a sunshine in that shady place,"—

he seems to have consigned most of his models too; for they are nearly all asleep, all enchanted in his mazy mysterious bowers, where their positions and cold-catching liability, conjoined with an ever-present mistiness, through the haze of which everything loses decision of form, hints a suspicion that they have suddenly succumbed to the influence of some narcotic incense, the secret, alike with the rest of his art, of the practiser. He is a genius who, if he sets at defiance ordinary laws and rules, can create others at his exigence, for without some such guidance it would be difficult to account for the perfect harmony that signalizes his most erratic conceptions. Confessing to an admiration for as much as we understand of all he does, (238) "The Bride," because she is so gracefully drawn (and, moreover, awake, up, and dressing), will serve for particular encomium.

The weight of the exhibition is borne by the landscape painters, and Messrs. Pyne, G. & V. Cole, Boddington, Clint, Gosling, Pettitt, Syer, Tennant, &c., are equal to the occasion. The prolific pencil of Mr. Pyne has furnished him with little short of a dozen exemplifications of his knowledge and executive facility. Mr. Boddington, scarcely less fecund, still delights in mountains, rivers, sedges, and brakes, stereotypes now of what was his early forte, and with Messrs. Tennant, Clint, and others, can evoke no remark that can add to repeated eulogy. Mr. G. Cole more emphatically asserts fresh study: his "Approaching Storm in Autumn—the last Load" (31) brings him prominently forward, and, allowing something for exaggeration, conveys a notion of a grand natural effect; Mr. Vicat Cole's "Road over the Heath" (95) is less likely to challenge question, and (295) "A Cornfield—Harvesting," just as little. Of Mr. Gosling's "Summer on the Thames" (202), the chief feature is its truth, and it is worthy of all commendation on that account, as most of his works are. There are so many other productions that claim examination and merit praise that we do the least and most we can for them, by designating some of them, such as Mr. Morgan's clever characteristic bits (5), "The Breach of Promise of Marriage," and (603) "Out of Work" (really admirable!); (20) "The West of Ireland, 1860," by G. W. Brownlow; (62) "The Look-out," P. R. Morris; (67) "The Woodhouse," J. S. Cavell; (101) "Fox and Goose," J. W. Haines; (128) "Dinner Time," W. Bromley; (146) "Summer Time and the last Magazine," W. M. Hay; (163) "Sugar," and (294) "Fresh Eggs," J. Hayllar; (245) "Still Life," Mrs. Anderson; (251) "Happy Hours," E. C. Barnes; (277) "The Village Pond—Winter," G. A. Williams; (285) "The Morning Call," G. Pope; (290) "The Valley of the Lledr, North Wales," an exceedingly fine landscape, by S. R. Percy, and (300) "At Oakham, Surrey," as beautiful in its way, by F. W. Hulme; (313) "Morning—the Mist clearing off," A. Gilbert; (326) "The Kaleidoscope," W. Bromley again; (328) "Fruit, Flowers, &c.," W. H. Ward; (336) "Juliet," T. F. Dicksee, and (443) "For the Opera," by the same; (385) "Labour's Sanctities," T. Heaphy (this deserves more than passing mention); (405) "On the look out," A. F. Patten; (505) "How do you like me?" (very well!) W. D. Kennedy; (575) "The Spring," C. Dukes, and (614) "Tuning up," F. G. Price.

There is much extra attractiveness in the water-colour room, in a great measure produced by Mr. T. F. Wainewright's superlative delineation of sheep compositions.

HOUSE-TOP AIRING GROUNDS.

At the suggestion of Dr. Horace Dobell, who is amongst those desirous to lead architects to make appropriate designs for the conversion of the tops of houses into private airing-grounds for the inhabitants of the houses, Mr. J. L. André has recently produced some designs and models which go part of the way. Some of these were exhibited at a late meeting of the National Club in Whitehall Gardens.

The following are the principal requirements of the plan to which Dr. Dobell has directed attention:—

"1. That the space now wasted at the tops of houses shall be made use of in such a manner as to provide for each house an *airing-ground* open to the sky (the extent of which shall be not less than three-quarters that of the ground on which the house stands), in which the inhabitants of the house can take the air and follow out-of-door pursuits, and in which children can engage in gymnastic exercises, free from the crowds of the streets and from the damp unwholesome atmosphere of back gardens, yards, or areas.

2. That the arrangements shall be applicable to low-rented houses suited to the working classes, as well as to others of a better class.

3. That the arrangements shall be particularly suited to streets, lanes, and closely-packed houses.

4. That protection of the house from wet shall not be interfered with.

5. That the airing-grounds shall be protected from the down currents of smoke from the chimneys.

6. That they shall not be visible from *the fronts* of the houses facing the public thoroughfares.

7. That perfect safety shall be secured from any danger of persons falling over while using the airing-grounds.

8. That the form of inclosure employed to provide against the danger of falling over shall not interfere with the free circulation of air within it.

9. That rooms shall be provided *on the level of the airing-grounds*, from the windows and doors of which parents can watch their children while they themselves continue their work.

10. That the airing-grounds shall be conveniently and safely accessible from the inside of the houses through the doors of the rooms on the same level with the grounds.

11. That the airing-grounds shall be separated from each other, but conveniently and safely accessible from those of the adjoining houses, and safely and conveniently accessible from the public thoroughfares, so that *a ready means of escape shall be provided* in case of fire, and also easy access to the upper parts of the houses by firemen."

Enough has already been done to show that there is nothing impracticable as to all that is good in this plan. It only requires endeavours on the parts of architects and builders to get over some of the first difficulties; and we might soon see it carried out on a very extensive scale in London and other large towns.

STRUCTURES IN THE SEA, WITHOUT COFFER-DAM.

INSTITUTION OF CIVIL ENGINEERS.

At the meeting on March 31st, Mr. Fowler, vice-president, in the chair, the paper read was on "Structures in the Sea, without Coffer-dams; with a Description of the Works of the new Albert Harbours at Greenock," by Mr. D. Miller.

It was stated that the immediate object of this paper was to treat of the various methods of constructing the foundations of quays, walls, piers, or breakwaters, for the formation of docks and harbours in deep water; and to describe works of this kind which had been carried out on principles different from those usually practised, and to point out the further application of these principles to other structures of a similar nature.

The plans which had chiefly prevailed were, founding on piling carried up to about the level of low water; constructing within caissons or coffer-dams; or building under water by means of diving apparatus. Instances of the failure of the first of these methods, which was believed to be inapplicable where there were marine worms, were given. The second was most effectual, but was generally expensive, and often attended with danger. The last was also costly, besides being subject to delay in the progress of the works. In bridge-building, of late years, the plan of forming inclosures of close piling of the shape of the pier, and filling in with hydraulic concrete, had been pursued by French engineers; and the substitution of iron for perishable timber piling, in the construction on this plan of the piers of the Chelsea and Westminster bridges, by Mr. Page, was considered to be a successful departure from stereotyped rules.

Although the value of béton or hydraulic concrete was now appreciated in this country as a substitute for masonry, and had been employed in some important works, yet its use was chiefly confined to forming a homogeneous and monolithic bearing stratum for foundations, and not, properly speaking, as a constructive material. The modes in which concrete had been applied for constructive purposes were, building it dry in mass, and allowing it to set before placing it in the work, as had been adopted in the construction of the walls of the Victoria and of the London Docks; preparing it first in blocks and allowing it to harden before being used, as employed at the Dover Breakwater, and for the new sea forts at Portsmouth and Plymouth; and depositing it in a liquid state, and allowing it to set under water, as practised at the Government graving-docks at Toulon. The facilities for making béton which had the invaluable property of setting under water, and of thus forming an artificial rock or stone, were very great; as it might be made either from the naturally hydraulic limes, the artificially hydraulic limes or cement, or from the rich or non-hydraulic limes, rendered hydraulic by the admixture of other substances, such as puzzolans, minion, or iron mine-dust. Various examples were adduced of the application of concrete, on a large scale, prepared from these different materials, especially at the mole of Algiers, at the breakwater at Marseilles, and at other French ports, as well as in the Pont d'Alma over the Seine, in which case both the arches and the piers were formed of rubble concrete.

As engineers-in-chief for the new harbour works for the port of Greenock, the author and his partner, Mr. Bell, had an opportunity of introducing a system of constructing sea walls and quays in deep water, without the aid of coffer-dams, diving apparatus, or other means equally expensive. These works were situate on the west side of the town, and had been projected almost entirely beyond the high-water line into the sea. The outer pier would ultimately be upwards of 3,000 feet in length and 60 feet wide at the top, with quays on both sides. Within this there would be space for two harbours, each 1,000 feet in length, 15 feet deep at low water, and 25 feet at high water, with entrances 100 feet wide, and ample room for the construction of graving docks, for the storing of timber, and for the erection of sheds. At present it was only proposed to erect about one-half of the sea pier, and to form one harbour or tidal dock. In the design of these works, it was suggested that the walls under low water should consist of a combination of cast-iron guide piles in the front, with a continuous stone facing, slid down over and inclosing these piles; timber-bearing piles being used in the body of the walls where required, and concrete backing being deposited in a soft state; and that the upper part of the walls should be built of masonry in the usual manner. The first operation, when the water was not sufficiently deep, was to dredge two parallel trenches to the required depth, 17 feet below low water, for the foundations. A staging of timber piles was afterwards erected in the line of the pier over its whole breadth, for carrying the tramways, travelling cranes, and piling engines. The cast-iron guide piles were then driven from the staging, with great precision, 7 feet apart in the line of the face of each quay wall. These piles were driven until their heads were near to the low water line, by pile engines furnished with long arms projecting downwards, strongly stayed by diagonals, and forming a trough into which the pile was placed, and from which it was shot, like an arrow from a cross-bow. The piles were connected at the top transversely by wrought-iron tie-rods stretching through the pier. When the piling was driven, a bed of hydraulic concrete, 3 feet thick and 20 feet wide, was deposited in the trenches to form a base for the wall, and to give a large bearing surface. Into the grooves formed by the flanges of the iron piles, large granite slabs, from the Ross of Mull, from 18 inches to 2 feet thick, were slipped, the bottom one resting on the concrete base, and on a projecting web cast on the piles. This constituted the face of the wall; and in each compartment between the piles, 16 feet

in height and 7 feet in width, there were only three stones. Behind this facing hydraulic concrete was lowered under low water in large boxes having moveable bottoms, and was discharged in mass to form the body of the wall. To confine this at the back before it had set, loose rubble stones were deposited. The hearting of the pier consisted of hard till, stones and granite, up to the level of low water. When the whole of this mass was consolidated, the heads of the iron piles and the granite facing blocks were capped by a granite blocking or string course, and the upper portion of the walls was built in freestone ashlar and rubble. The remainder of the hearting between the walls was then filled in, and the whole finished with a granite coping and causeway. The walls were 33 feet in height from the foundations, 11½ feet thick at the concrete base, diminished to 5 feet at the top. In the part of the work already executed, the outer flange of the iron piles was exposed to the action of the salt water. In future it was intended to reverse this plan, and to make grooves in the stone facing, so that it should overlap the iron piles, filling in the grooves from the top with cement. When the whole extent of the seaward pier was completed, the interior operations for the harbour would be proceeded with; this pier serving as the principal coffer-dam, and a short dam, about 100 feet in length, closing the entrance. It was stated that this mode of constructing walls in deep water without coffer-dams has been most successful, and that a sea pier of great solidity and durability had been formed in deep water at a comparatively moderate cost. The works of the Albert Harbour were being executed under the superintendence of Mr. John Thomson, as resident engineer, by Messrs. W. & J. York, contractors.

The application of this system to the construction of breakwaters and harbours of refuge, was then noticed; reference being first made to the principal modes of construction hitherto adopted, and to the peculiar phenomena by which such structures were affected.

THE PALACE OF THE UNIVERSAL AND PERMANENT EXHIBITION OF PARIS.

The works here have been steadily carried on without interruption. Several portions of the masonry in the outside walls have already reached the height of 35 feet: the rough work of the principal entrance is far advanced: the columns and flooring are being raised; and all the castings are ready to be put in place. We learn from French sources that a busy scene is presented in the workshops, where all the pieces of metal composing this edifice are being prepared. Powerful machines of all sorts, worked by steam, bend, plane, and shape the iron in a hundred different ways, according as the several pieces have been cut to the required form, sheared to the proper lengths, and drilled or punched ready to be put into the work: they are immediately transported to their destination in chariots moving on rails.

The columns are raised by means of pulleys, and the bases rest on cut-stone blocks, into which they are inserted: being hollow they will serve to carry off the rainwater from the roof to the drains. Two hundred columns are already up in their places. When all the columns have been erected, the framing of the roof will be carried on by means of scaffoldings of immense size, which will be moved on tramways by capstans worked by steam power. Two scaffoldings of this description, and of equal size, will start one at each end of the great nave, and will advance till they meet in the centre, where a gigantic dome will be reared.

On the exterior, besides the masonry being, as we have said, in a forward state throughout, the basement is completed; the two corner pavilions are carried up as far as the roof; and the piers of the recesses are, in many places, up to the height of the first floor, the separation here being only indicated by an open-work gallery of iron: the compartments of this gallery, including the grille which is to surround the whole of the exterior of the edifice, are ready. The quantity of iron upon the ground ready to be placed amounts to many thousand tons.

The building, of which we have already given illustrations, will be furnished with, in addition to two principal entrances, eight others of minor dimensions, for the exigencies of the service. Annexes are to be provided, each for some special purpose. In a few days excavations will be commenced for the foundations of one of these supplementary constructions, viz., that for machinery: it will be 492 feet in length, and 115 feet in breadth.

The prolongation of the Chemin de Fer de Ceinture, between the Porte d'Auteuil and the Pont-du-Jour, will pass at the north-western extremity of the Paris Exhibition Building. The cast-iron work for the edifice is supplied by Messrs. T. Edington & Sons, Phœnix Iron Works, Glasgow.

THE MARRIAGES OF ENGLISH KINGS AND QUEENS SINCE THE CONQUEST.

The following list, which for greater distinctness is arranged in a tabular form, has considerable interest, and shows that three of our kings and queens died unmarried; that the others formed 13 French alliances, 10 English, 7 German, 3 Spanish, 2 Danish, 1 Portuguese, 1 Flemish, and 1 Scotch:—

Never Married.

William II.	Edward VI. (died young).
Edward V. (died young).	Elizabeth.

French Alliances.

Stephen	married to	Matilda of Boulogne.
Henry II.	,,	Eleanor of Guienne.
Richard I.	,,	Berenquella of Navarre.
John (3rd wife)	,,	Isabella of Angoulême.
Henry III.	,,	Eleanor of Provence.
Edward I. (2nd wife)	,,	Isabella of France.
Richard II.	,,	Anne of Luxembourg.
Ditto	,,	Isabella of France.
Henry IV.	,,	Mary Bohun.
Ditto	,,	Joanna of Navarre.
Henry V.	,,	Catherine of France.
Henry VI.	,,	Margaret of Anjou.
Charles I.	,,	Henrietta of France.

Spanish Alliances.

Edward I. (1st wife)	to	Eleanor of Castile.
Henry VIII. (1st wife)	,,	Catherine of Arragon.
Mary I.	,,	Philip, King of Spain.

Portuguese Alliance.

Charles II.	to	Catherine of Portugal.

Danish Alliances.

James I.	to	Anne of Denmark.
Anne	,,	George, Prince of Denmark.

German Alliances.

Edward III.	to	Philippa of Hainault.
George I.	,,	Sophia of Zell.
George II.	,,	Wilhelmina of Anspach.
George III.	,,	Charlotte of Meck Strel.
George IV.	,,	Caroline of Brunswick.
William IV.	,,	Adelaide of Saxe Meiningen.
Victoria	,,	Albert of Saxe Gotha.

Flemish Alliance.

Henry VIII. (4th wife)	to	Anne of Cleves.

Scotch Alliance.

Henry I.	to	Matilda of Scotland.

English Alliances.

John (1st wife)	to	Earl Montague's daughter.
Edward IV.	,,	Elizabeth Woodville.
Richard III.	,,	Anne Nevil.
Henry VII.	,,	Elizabeth of York.
Henry VIII. (2nd wife)	,,	Anne Boleyne.
Do. (3rd wife)	,,	Jane Seymour.
Do. (5th wife)	,,	Catherine Howard.
Do. (6th wife)	,,	Catherine Parr.
James II.	,,	Anne Hyde.
William III.	,,	Mary, daughter of James II.

THE PROPOSED HULME FREE LIBRARY, MANCHESTER.

The local Free Libraries Committee have reported that they had considered the plans submitted to them for the branch lending library for Hulme, to be erected on the plot of land in Stretford-road, adjoining the new Town Hall. They recommended that the plans should be approved. The estimated cost would be 5,530*l*. A motion was made in the council last week that the committee be authorised to purchase the land and erect the proposed building, which would be a very handsome structure. A long and desultory debate ensued, the general opinion being against so large an outlay upon one branch library; and an amendment was carried referring the matter back to the committee for information as to the proposed outlay. In course of the debate one of the speakers, Alderman Neill, made the far-fetched observation that the building ought to be a plain one, like a workhouse, to which it was akin, being a charity. On which Councillor Rawson asked whether Mr. Neill felt at all like a pauper when he visited the National Gallery and British Museum reading-room, which were supported by the funds of the State. It was right, he remarked, and desirable that the working classes should assemble in places where some degree of art and skill had been expended; and he denied that they were incapable (as some persons asserted) of receiving therefrom æsthetic and moral influences. It was better to spend 6,000*l*. upon a free library than 20,000*l* upon a gaol, for prevention was cheaper than cure. Another councillor remarked that he thought the privilege of visiting fine institutions would induce in the people a desire to improve their own abodes.

OPENING OF THE WEST LONDON EXTENSION RAILWAY.

The West London Extension line of railway to the Victoria Station at Pimlico has been opened for public traffic. This is one of the most valuable connecting lines in the country, and it will also afford a large amount of local accommodation in the districts of Southall, Hanwell, Ealing, Kensington, Chelsea, and Battersea, at each of which a station has been erected. There will be three trains each way on Sundays. In addition to the local traffic there is a direct communication between the North and West of England, and Kensington, Brompton, Hammersmith, Fulham, Chelsea, Battersea, and Westminster, and with all the stations on the London, Chatham, and Dover, and the London, Brighton, and South Coast Railways. The West London line was laughed at for years: it became known as *Punch's* line. The late Professor Hosking was the original engineer. The conductor of this journal acted as the architect and surveyor of the line, and never lost faith in its value and importance. A really good thing lives down laughter and *makes* its worth felt. A recollection occurs to us not altogether *mal-àpropos*. At dinner one day, the late Charles Dance made a joke,—not an unusual thing with him,—but his listener was obtuse. After a time however, Thickhead said, "That's a very good thing, *now I see it.*" "Ah! and so it was before," replied Dance.

CITY IMPROVEMENTS.

According to the *City Press*, Messrs. Barclay & Co.'s Bank, Lombard-street, is shortly to be pulled down, to make way for a more modern building; and the firm are now fitting out a temporary banking-house.

The London Dock Company have taken possession of new and extensive warehouses in Lime-street.

Messrs. Spooner's Bank, 27, Gracechurch-street, is to be pulled down; also the adjoining premises, No. 26, and a larger ornamented structure is to be erected on the site.

The Corporation have in contemplation the removal of the houses Nos. 55, 56, 57, and 58, Great Tower-street, in order to widen the carriage way.

On the south side of Allhallows Church, Barking, Great Tower-street, a portion of stone and brick work which formed, it is supposed, a part of the Bell Tower in ancient times, is being removed, and a new porch is in course of construction.

The numerous buildings in course of erection on the site of the ground once occupied by the East India Company are progressing very fast.

A quaint-looking building, No. 2, Mincing-lane, once a blacksmith's shop, is to be pulled down. No. 3 in the same thoroughfare, an old dwelling-house of the early part of the seventeenth century, has been pulled down, and new premises erected by Messrs. Moses & Son, suitable for letting out as offices.

INTELLIGENCE FROM GUERNSEY.

Prince Consort Statue.—The spot on which the statue in memory of Prince Albert is to be erected has been decided on by the States of the Island. In consequence of the island granite not being found sufficiently thick for a pedestal, the committee appointed to conduct the raising of the statue have decided upon making it of English granite. Mr. Durham, the sculptor of the memorial, has informed the committee that he will undertake to procure, for 210*l*., a block of the same material as that used in constructing the Hanois lighthouse,* off the west coast of Guernsey. The tender sent in from the island was for upwards of 380*l*. This decision will disappoint the public, but sufficient reasons are put forth to silence opposition. The Lieutenant-governor, at a meeting of the States, said that Guernsey granite exposed to the air became spotted, and was utterly beneath the character of the work about to be erected. He also remarked that one of his friends had on his grounds some granite in the state alluded to, and upon inquiry he found that the defect could not be removed.

Beacon.—A beacon on the Rocque de Braye is about to be erected, the expenses to be borne by the harbours of the St. Sampson and the town.

Railway.—A committee named by the States has been formed for the purpose of examining and reporting whether it would be practicable to lay down a railway from the Vale and St. Sampson's Quarries to the Town Harbour, and the committee have had 100*l*. voted to meet the expenses of the survey.

* This lighthouse is now completed, and all masters of vessels agree in stating that the light is a fine one.

MONUMENT TO MRS. LANCE.—Mr. J. Forsyth, Sculptor.

MONUMENT TO MRS. LANCE.

This monument is erected to the memory of Mrs. Madelena Louisa Lance, the wife of the Rev. J. E. Lance, rector of Buckland St. Mary. Mrs. Lance died shortly after giving birth to a child: the infant died also, and they were buried together. The church of Buckland St. Mary, in which the monument is placed, was recently built from drawings by Mr. B. Ferrey. The monument is fixed in an ornamented recess within the sacrarium of the chancel, and the recess is backed with a slab of black marble. Upon one of the mouldings is inscribed, "I believe in the resurrection of the dead." The monument is executed in Caen stone by Mr. J. Forsyth, of London.

THE PROTECTION OF BUILDINGS FROM LIGHTNING.

The following remarks are taken from a communication in the *Scotsman* newspaper on this subject:—

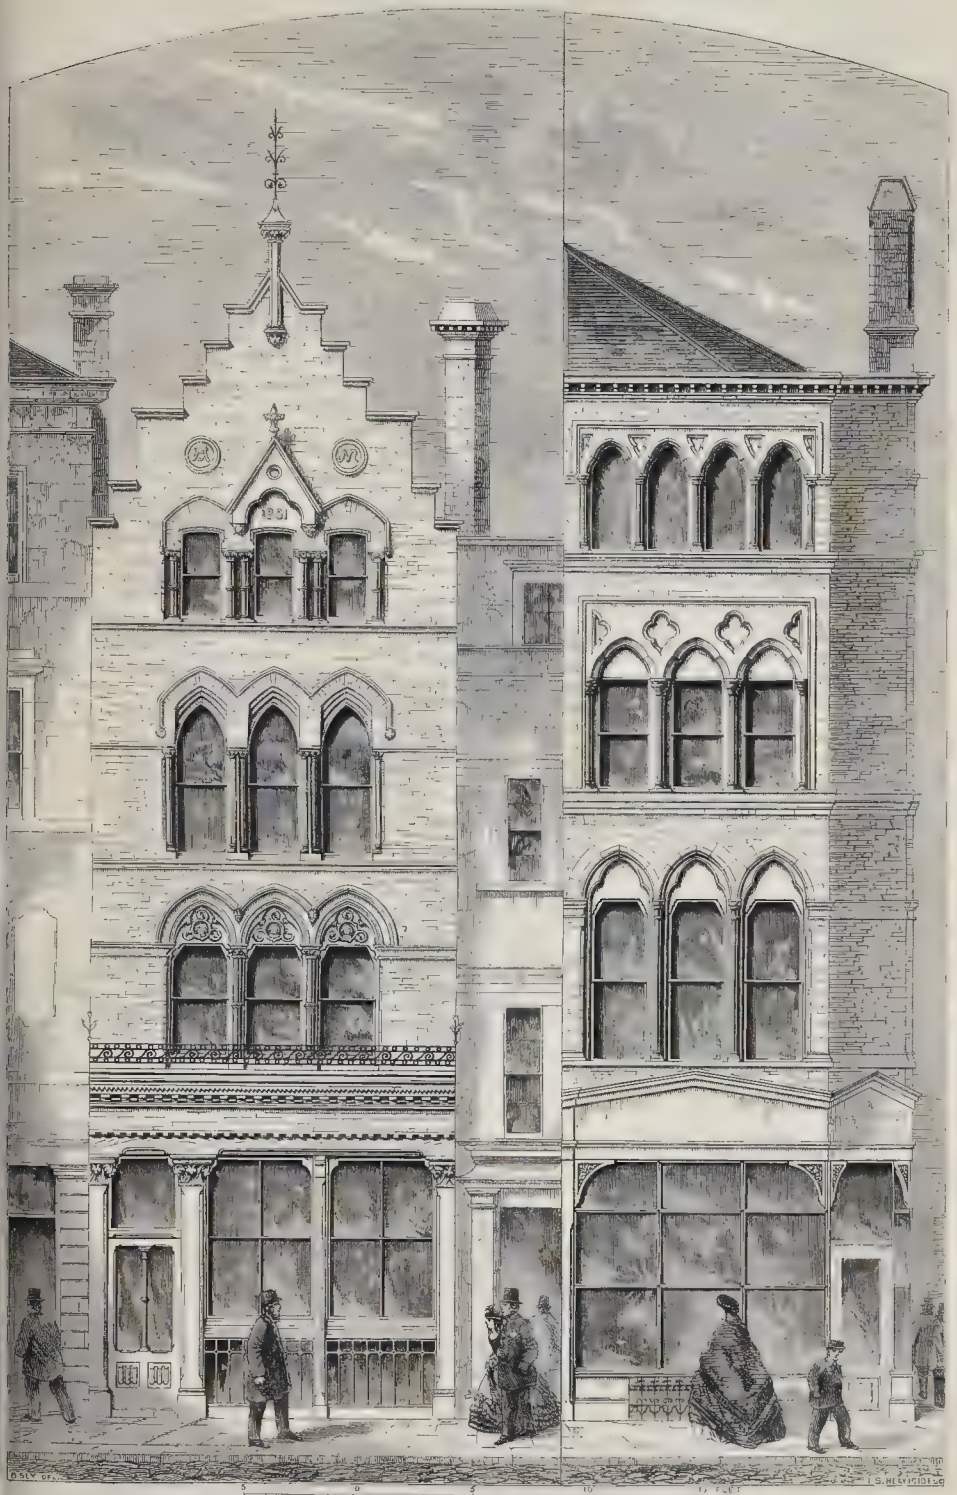
Pieces of glass were attached to the more prominent points of Christ Church, Doncaster, in consequence of an idea, which is too prevalent, that their non-conducting properties would *divert* the lightning. A single flash laid the costly structure in ruins. On the other hand, buildings have suffered severely even when a conductor was used. One of the causes is, that in many cases comparatively thin *wires* are used instead of very thick ones or *rods*. If a conductor is not sufficiently thick, it will be fused, just as a thin wire will be fused by a voltaic current which cannot sensibly raise the temperature of a thick one. We have had many opportunities of observing this result; and in every case serious consequences would have probably followed had not different channels of escape presented themselves. Lounging one day at a railway station, a flash from a cloud in close proximity struck a thick wire, passed into the station, and set fire to it. On examination, we found that the only connexion with the ground was a thin wire, which had been melted. The fluid had therefore been dissipated throughout the room in its efforts to escape.

Another frequent cause of injury results from the fact that a conductor, made even on the most approved principles, is often regarded as affording absolute protection in *itself*. Apart even from the proof afforded by experience, a little attention to the phenomena of the thunder-storm would prove the fallaciousness of the idea. The spire of a church may be protected by a rod; but if, as is frequently the case, there are subordinate prominent points on the building, surmounted by gilt ornaments, not in metallic connexion with the ground; and here and there detached pieces of lead or of zinc; *absolute* protection will not be afforded, from the simple fact that a flash not unfrequently "bifurcates," or divides into two portions—one striking the rod, and the other striking some detached object. If the detached object is not in metallic connexion with the earth, it will probably be rent or displaced; and if the flash meets with obstructions in the shape of other non-conductors, it will commit the havoc which we so frequently hear of.

One writer has shown that the Temple of Solomon was lightning-proof, from the manner in which the metal employed externally was disposed. In the same way, most of our buildings are unintentionally provided with a kind of protector in the shape of the lead or the zinc sheathing and the metallic gutters on the roofs, connected with the rain-pipes, which terminate in the cesspools and drains. Why are those materials not always employed in conjunction with the conductor? Under certain conditions, they offer facilities for the escape of the fluid, which, if taken full advantage of, would in some cases greatly lessen the risk of danger; in most, render edifices lightning-proof. So far as houses are concerned, the desired object may be attained by simple means. Care should be taken that the whole sheathing on the roofs should be *metallically* united by nailing the different portions at their points of contact; and every *detached* piece of metal should be brought into connexion by means of a broad strap of copper, of lead, or of zinc. The whole should then be *metallically* united with the gutters which lead into the rain-pipe. Should a flash strike *any portion* of the sheathing, it will thus find a free passage into the ground, provided always that the rain-pipe is a metal one. The lightning-rod should be fixed to the sheathing at a distance of about 2 feet from the chimney-pots. Carbon is one of the best of non-metallic conductors; hence the reason why the soot of chimneys offers peculiar facilities for the passage of the fluid, and thus endangers both life and property.

The remarks which we have made in reference to the sheathing of houses are also applicable to lofty public buildings. In addition to their connexion with the rain-pipe, the sheathing and gutters should be united to the lightning-rod by two or three thick wires. Gilt ornaments and vanes surmounting isolated subordinate turrets, &c., should also be metallically united with the rod and the rain-pipe. In every case, indeed, the simple principle should be adhered to of making all the metal employed externally, whether usefully or ornamentally, practically *one conducting body* in good connexion with the ground. Twisted strands of copper, or of galvanized iron wire, are well adapted, on account of their flexibility, to the establishment of connexion between isolated portions of a building, and they may be easily disposed so as to prevent the marring of architectural features. Where rods are used, the risk of "bifurcation" will be greatly lessened by splitting them for a foot or so from the top, or by attaching two or three spikes obliquely, so as to present several points of attraction. Should danger be apprehended from a *lateral* stroke, we would suggest that spires and elevated monuments be girt *spirally* with a twisted copper or galvanized iron wire-rope—say of seven strands at least—protruding spikes being placed at an interval of every 2 or 3 feet. We are not aware whether any arrangement of this kind has been proposed hitherto; but we feel assured that, were it carried out, it would form a highly efficient conductor;—more efficient, perhaps, in some respects, than any which we have seen.

Experience has shown that wherever a system of protection based on sound principles has been adopted, no injury has resulted. But experience has also shown that where there is no system, or where only a partial one has been resorted to, the destruction of the most stately edifices may be the work of a moment.



MODERN STREET ARCHITECTURE: LONDON.

Recording the varying architectural street fronts which are rising in all quarters of the town, we have engraved two houses erected from the designs of Mr. T. Hayter Lewis.

The house in *Cheapside* was built for Mr. H. A. Soames, according to the special requirements of the tenant (a silversmith). The cost was 1,313*l.*, the amount of contract, including stoves, &c. The builders were Messrs. Asford, of Coleman-street. The materials are white brick and stone. The design originally comprised an attic story in a high-pitched roof; but this was abandoned on account of the expense. In the foundations several old walls of rough chalk, &c., were found, following the present wall lines, but no Roman remains.

81, *Old Broad-street.*—This was built for Mr. J. Remington Mills, M.P., and Mr. A. Scrutton. The mouldings are partly in brick, but chiefly in stone. The total cost, including stoves, &c., was 1,002*l.* The builders were Messrs. Ashby & Horner, of Aldgate. The house is built entirely for chambers, as much light being given as possible. Several traces were met with (at a depth of 13 feet from the street) of an old Roman building on the site.

LONDON STREET ARCHITECTURE.—Mr. T. Hayter Lewis, Architect.

81, OLD BROAD STREET. HOUSE IN CHEAPSIDE.

THE FEMALE SCHOOL OF ART.

The students submitted this March 105 drawings in competition; and the Government inspector awarded the full number of medals,—thirty. Of these medalled drawings, fifteen were selected to be sent in competition with the other schools of art throughout the United Kingdom for national medallions. It is evident, therefore, that the school is holding its own. Some of the drawings showed considerable ability, especially those by Miss S. McGregor. Amongst the works, those which more particularly attracted our notice were by Miss S. Blake, Miss C. Phillott, Miss F. Seddon, Miss J. Fox Smith, and Miss E. Snellgrove. Miss E. Childe had a medal for a drawing on wood from nature. We are forced to say we desiderate a more vigorous description of art than at present exhibits itself in Queen-square. Flowers are all very well in their way, we delight in them: but from a world all flowers, deliver us!

FOUNTAINS, KENSINGTON GARDENS.

When care is shown in the endeavour to improve public places, and particularly when emendation is effected where neglect had formerly been but too palpable, it is hard to find fault with works of innovation; nevertheless, in respect to the new realization of an object of great interest in so popular and valuable a place of summer promenade, a hint may not be amiss.

For the large expenditure of Woods and Forests funds, and the good intentions of the Commissioner, all credit is allowed; still every one viewing the reservoirs first designed for filtering-beds, but now converted into squirt-basins, feels disappointed at the result, as well as at the want of finish in the marginal precincts, which are rude and shapeless as heretofore.

The large tazza fountain, with side figures, has certainly a good effect, as also that in the centre of the filter-beds; but the four slender squirts in these latter basins are ridiculed by all, especially by those who have seen Versailles and other foreign water-works. That it would materially improve and embellish the *ensemble* if these basins were *filled up and planted with flowers*, is the general opinion.

After all the expenditure of time and money upon the wells and mechanism, all that has been acquired to freshen the stagnant lake is the flow of 160 gallons per minute, *so long as one engine is in action*. The second engine is applied to the raising and circulation of the water in the Serpentine; and thus, by aëration and refluxion, most certainly a great improvement is effected.

After all the work of laying massive pipes at a sinking gradient along the whole margin of the lake, to take the water back to the engines, for filtration, these pipes and these beds are useless; so, to redeem the mistake, the four squirts were placed there. Better enlarge the central jet, and extend by 10 or 12 feet its basin, which at present scatters spray on the adjacent walk!

Much care and skill are lavished upon one portion of the Park borders,—that bordering Park-lane. Would not a little of the same taste and skill be applied appropriately in and around the favourite and beautiful dell of the fountains? We have but this solitary example of a public fountain in a really charming and suitable position,—the only one, too, within reach of hundreds of thousands who rarely emigrate farther. That example ought to be respectable, if not altogether incomparable; but the basin of the central fountain should be not only enlarged, but lowered in its margin, which actually conceals the spreading lotus leaves and lower falls! Then the vicinal borders ought to be laid out in beds of shrubs and rich flowers. This properly done, the effect in that forest nook would be indeed beautiful and solacing.

It is true that some trees have perished there, the roots having been cut in laying the futile pipes; still, there are trees enough: indeed, as before observed in the *Builder*, throughout the whole extent of the gardens, where one-half of the trees are deformed, and many dying off through too close propinquity, a number of them ought to be cut away, to allow the remainder a chance of surviving, and throwing out lateral branches. At present one full fourth part are little better than bare poles.

The value of this incomparable suburban park to all classes of oppidans is inestimable; therefore no outlay can be thrown away which might render it a source of health and enjoyment to the million. What has been accomplished towards obtaining a supply of fresh spring water, to redeem the disgusting and sickening state of the green and yellow melancholy lagune mis-called the Serpentine, has been done by Mr. Docwra, the contractor; and had he been allowed to carry out his views, when he sank 317 feet for the London basin spring, he could as easily produce 500 gallons per minute to create a perpetual cascade, at the tail of the lake, and over the present dry, rusticated falls; and there is one advantage in this fresh supply, that the element is of the clearest, softest, and purest.

It may be observed respecting the wells and mechanism formed by Messrs. Easton & Amos at Duck Island, St. James's Park, that some further works are meditated or are now in action there: the source of supply is, however, owing to the ooze of the Thames and the sluggish sewers of that level, far inferior in quality to that of Paddington (Spring-street) locality. The circulation and aëration of the same body of water may correct much of the fœtor and miasmata of a standing pool; but the infusion of pure, fresh "*de profundis*" is a more reliable source, besides that the numerous swimmers and bathers must acquire more vigour from immersion, whilst boating amateurs and nautical neophites would experience a more refreshing and invigorating exercise from their pastime.

Quondam.

VARIORUM.

RARE WORKS ON ARCHITECTURAL SUBJECTS.

A punning correspondent sends us the following catalogue of very odd volumes. They are, he says, uniform with Hood's list:—

Angell, On the Wings of Villas.
Ashpitel, On Stoke-holes.
Armstead's Handbook of Architecture.
Burnet's Effectual Cure of Smoky Chimneys.
Bell's Application of the Telegraph to Domestic Use.
Baker, On the Arrangement of Ovens.
Burn, On Fire-proof Construction.
Christian, On Churches.
Coxe's Antiquities of Enfield.
Deane's English Cathedrals.
Driver, On the Steam-Engine.
Eyre, On Ventilation.
Ferrey, On Bridges.
Fergusson, On Lodgings.
Fowler's Columbary.
Giles, On Rural Retreats.
Goldie, On the Abuse of Gilding.
Hall, On Pulleys.
Knowles, On Works in Theatres.
Kerr, On the Construction of Kennels. Also a new Tale.
Lamb, On Slaughter-Houses.
Lewis, On Weights.
Lightly, On the Principles of Modern Construction.
Mair's Stables.
Newall's Law of Dilapidations.
Nelson's Bird's-eye View of Trafalgar-square.
Mayhew, On Quarrying and the Qualities of Stone. Revised by Whewell.
Oliver, On Rolandsec.
Parker, On Landscape Gardening.
Pugin's History of St. Augustine.
Pearson's Artesian Wells.
Penfold, On Cattle Markets.
Porter, On Biers.
Richardson, On the Shows of the Ancients.
Rickman, On Farm Buildings.
Shout, On Sound in Rooms.
Self-Culture, by I. Reid.
Scott, On Everything.
Street's London and its Suburbs.
Slater, On Iron Roofs of Recent Construction.
Smith, On Mediæval Metal Work.
Smirke, On the Laughing Gas.
Tarring, On Fences.
Taylor's Account of Cleopatra's Needle.
Turner's Round Towers of Ireland.
Turnbull's Dairy Homesteads.
Tite, On the British Costume.
White's Polychromy.
Weale's Revolutions in Art.

SANITARY STATE OF HOLMFIRTH.

Many deaths have lately occurred at Holmfirth from scarlet fever, arising from the sanitary deficiencies which exist in that town and neighbourhood. The Medical Department of the Privy Council recently had their attention directed to the subject, and they sent a medical inspector down to investigate the circumstances of the increase in the mortality, and he has made a report, in which he describes the shocking state of filth in which many parts of the village are literally steeped. Notwithstanding an abundance of water, too, which the hills are capable of supplying, the inhabitants are badly off for water supply; and as for drainage there seems to be little or none, and scarcely any cesspools. In consequence of the inspector's report, the Medical Department of the Privy Council have addressed the usual letter, by their secretary, to the Huddersfield Board of Guardians, as to the bad condition of the registration district, and the local administration of the Nuisance Removal Acts, which is in the highest degree unsatisfactory. Their lordships also express their desire to know whether there is any reason why the village of Holmfirth should not be provided with such a system of house-drainage and water-service as would enable the inhabitants to substitute properly constructed water-closets for their present undrained and most offensive privies. The Board of Guardians have thus been forced into action, and it is to be hoped something effectual will speedily be done, especially as the summer is nigh.

ARCHITECTS' COMMISSIONS FROM TRADESMEN.

A correspondent, dating from Manchester, and signing "One who will not fee," asserts that several of the architects there give builders to understand that as a matter of course they expect to receive a commission on all the work done under them, whether by contract or by private arrangement. Further, that he fears the system is on the increase. We must have something more than general assertion before we can believe so injurious an assertion as this.

The writer says, "The evil is baneful in its results; destroying the independence of a class who, above all men, ought to be above being bought; and often, as a natural consequence, leading to the sacrifice of the interest of the proprietor."

Our readers do not require to be told our own opinion on the subject; but we must have proofs before we can admit the truth of the accusation.

SCHOOL-BUILDING NEWS.

Halifax.—New schools for St. Thomas's Church district, and a schoolmaster's house, will, in all probability, be erected during the summer months, as plans for the buildings have been prepared, and the committee intrusted with the matter are taking steps for obtaining contracts. The cost of the erection is expected to be about 1,400*l.* Towards this amount about 450*l.* have been subscribed, and 450*l.* promised in grants. The site, valued at 300*l.*, has been given.

PROVINCIAL NEWS.

Melton Mowbray.—The guardians of the Melton Mowbray Union having determined upon building a new house for the master and mistress in connexion with the present workhouse, plans were prepared by Mr. R. W. Johnson, and these having received the sanction of the Poor-law Board, will be carried out during the ensuing summer.

St. Neots.—The new Corn Exchange building is approaching completion. It is expected that the structure will be completed by May. Mr. Wildman is the builder; and Mr. Bellamy, of Lincoln, the architect.

Oxford.—The new Corn Exchange at Oxford, which has been erected at the cost of the town council, was to be opened on Wednesday with a grand banquet. The works have been ably carried out by Mr. Dover, of Oxford, builder, from the designs furnished by Mr. S. L. Seckham, architect and surveyor to the city of Oxford.

Chatham.—The Marquis of Hartington, one of the Lords of the Admiralty, has been inspecting the works in progress on St. Mary's Island in connexion with the extension of the dockyard. His lordship, who was accompanied by Colonel Godfrey Thomas Green, director of engineering and architectural works, was conducted over the island by Mr. Bernays, civil engineer, under whose superintendence the works are being carried out. He then proceeded to the Royal Marine Barracks, and was shown over the additional barrack-rooms which are now being erected by Messrs. Foord & Sons, of Rochester, the Government contractors. The first block of buildings, which will accommodate between 200 and 300 men, are now completely roofed in, and will probably be ready for occupation by the end of the summer.

Maidstone.—The Town-hall, which for so many years has needed repair, has at last been renovated and decorated. The substantial repairs,

the painting and the graining, have been executed by Mr. L. Ashdown, of Stone-street. The artistic decoration is in the Cinque-cento taste. The ceiling is decorated with bright lines, foliages, and medallions, the stucco work being slightly heightened by gilding. The walls are divided into panels by borders, from the tops of which hang trophies in allusion to arts and arms, and the natural products of the earth,—as birds, beasts, corn, fruits, flowers, &c., among one of the most conspicuous of which is the source of the wealth of the neighbourhood—the hop. The borders have small medallions containing heads, and in the cove of the ceiling are others of larger size, containing those groups of boys at play which the Italians call "puttini." The decoration has been executed under the direction of Mr. Arthur Ashpitel, by Signor Francesco Galli and Signor Cotti, of Edgeware-road. On the frieze over the windows and panels, in small letters are written a few of the names of those natives of Kent who have distinguished themselves by learning and science, or in arts, arms, jurisprudence, or philosophy. This practice, as the *Maidstone Journal* remarks, is not unusual abroad, particularly in France, as, for instance, at the Bibliothèque, near the Pantheon, at Paris (illustrated in our pages), on the frieze of which the names of their great men are placed.

Sheerness.—A new building has been erected by Government, at a cost of upwards of 3,000*l.*, for the accommodation of the troops in garrison. It consists of a day-room and reading-room, situate one over the other, each measuring 80 feet long, 23 feet broad, and 12 feet high. Adjoining the reading-room are a library and coffee-room, as also quarters for the librarian. The site of the building is at right angles with the eastern extremity of the soldiers' new barracks. The opening is expected to take place next month, when amateur theatrical performances and a series of concerts will be given. The erection of the building was executed under contract by Mr. G. Naylar, of Rochester.

Brighton.—The works committee of the local council have received a letter on behalf of Miss Clark, for permission to erect a drinking-fountain opposite the Bristol Hotel. The committee have resolved that permission be given to Miss Clark to erect a drinking fountain, of the design submitted, on the south side of the Marine-parade, in front of the steps leading to the beach opposite the Bristol Hotel, on condition that the sum of 100*l.* sterling be invested by Miss Clark, in 3 per Cent. Consols, as the council should direct, as a fund for the permanent supply of water for, and the painting and repairing of, such fountain. The council have confirmed this.——A letter was received by the council from Mr. E. Birch, on behalf of Mr. G. W. Simpson, with a tracing, showing the plan, elevation, and section of a proposed pier, opposite the west end of Brighton, and its contemplated junction with the Esplanade, for the sanction and approval of the council. Upon this the works committee recommended the council to consent so far as it lawfully can to the erection of the proposed pier opposite Regency-square, as shown by the plans and sections submitted, the works to be done under the supervision of the surveyor. Some 15,000*l.* or 20,000*l.* are to be expended on a structure in front of the west cliff. The committee's recommendation was confirmed.

Coventry.—From an authentic return just made of the number of empty houses, business premises, shops, public-houses, &c., in Coventry, it appears that there are vacant in this city, at the present moment, no less than 25 public-houses, 108 business premises, 681 front dwelling-houses, and 515 houses in courts, making a grand total of 1,329 houses and premises out of use. Emigration is actively going on.

Bradford.—A special meeting of the proprietors of St. George's Hall was held on Tuesday, to consider a recommendation of the directors for the enlargement of the present saloon of the hall. Mr. Lockwood, architect, laid before the meeting plans, showing how the room might be enlarged. He said it was proposed to take in the small anterooms at the ends of the saloon, by doing which they would obtain a room 76 feet in length, and to move forward the front of the patrons' gallery in the large hall, in order to increase the width of the room. By these alterations a room would be got which would accommodate 600 people, exclusive of the orchestra. Mr. Lockwood explained another alteration which it was proposed to make, for the purpose of improving the approach to the great west gallery of the large hall. The expense of these alterations, he said, would not exceed 1,200*l.* After a very long discussion, it was resolved, "That the directors be now empowered to make the alterations in the enlargement of the present saloon as suggested by the architects in the plans presented to the meeting, and that they be authorized to borrow the money for that purpose."

CHURCH-BUILDING NEWS.

Clifton (Beds).—The parish church of All Saints', Clifton, which is supposed to have belonged, as did the manor, to the Knights of St. John of Jerusalem, has been restored and enlarged at the expense of the present patron, Mr. Miles. The church consisted of a western tower, a broad nave, and north aisle; south porch, chancel, and chancel aisle; and possessed many interesting features, which have been carefully preserved and brought to light. The walls, piers, moulding, &c., have been denuded of whitewash, with which they were disfigured. Pews and galleries also abounded, but have entirely disappeared. Additional church-room having become necessary, it was decided to rebuild and enlarge the north aisle and chancel aisle, both of extremely late date, in preference to disturbing the south wall, which contains several good decorated windows, &c. The style of the new work is Geometrical. A "low side window" was discovered at the south-west angle of the chancel. The east window is of five lights. There are sedilia, and a double piscina; an alabaster tomb, with recumbent figures of Sir Michael Fisher and wife, who died in 1549; and remains of a rood-loft, of Perpendicular date, in the shape of sixteen panels, having painted full-length figures of the Apostles and Saints, which formed part of a gallery front, will be preserved in the church. Of the old font nothing was left but the thirteenth century bowl, which has been provided with a new base and cover. The roofs are entirely new, and covered with Staffordshire tile. Coloured marbles are used in the pulpit, and low stone screen between chancel and nave. The seats are open and uniform, and the stalls, lectern, and chancel fittings generally are of Baltic oak. Three of the windows have been filled with glass by Hardman. The rest are glazed with thick green glass in two colours. The chancel is paved with Minton's tiles. Bath stone has been used for the dressings, &c., and sandstone from the neighbourhood for the new walling. The works have been carried out under the direction of Mr. Haycock, jun., of Shrewsbury, architect, by Mr. Geo. Jeeves, and Messrs. Warren, of Hitchin, and Mr. Davies, of Ailsey. Mr. Dodwell, of Shrewsbury, supplied the hot-air apparatus; and the lighting is by Skidmore.

Billesdon (Leicestershire).—The roof, south wall, and chancel arch of the church being in a state of great danger and decay, the latter temporarily propped up with a wooden buttress, to permit the church being used for divine service, increased accommodation is absolutely needful. The estimate for the whole (including the rebuilding of the tower and spire, which has been completed at a cost of 740*l.*) is 1,940*l.*; of which 600*l.* have been subscribed by the inhabitants and landowners of Billesdon, and 400*l.* through friends, and two grants from the Church-building Societies of 80*l.* and 30*l.* each. A bazaar has also been held in order to forward the object in view.

Bray (Maidenhead).—The committee appointed with the view of carrying out the works connected with the restoration of the parish church have recently published a statement of the accounts, from which it appears that, including works contributed by the churchwardens, a total of 5,073*l.* 4*s.* 3*d.* has been expended on the restoration. In addition to these works the following stained windows, according to the *Windsor Express*, have been placed in the church:—East chancel window by Wailes, and west nave window by Lavers & Barraud, the gift of Mr. J. Hibbert; window at west end of north aisle, by O'Connor, the gift of Mr. J. J. Coney; window at west end of south aisle by Hughes, the gift of the relatives of the late Rev. Walter Levett; three windows in south chancel aisle, by Lavers & Barraud, the gift of Mr. E. H. Palmer; single window westward of the tower in south aisle, by Lavers & Barraud, the gift of Mrs. Palmer; three windows in north chancel aisle, all executed by Lavers & Barraud, viz., large east window, given by Mr. C. P. Grenfell, M.P.; window eastward of organ, by Riversdale, Mr. W. Grenfell; window westward of organ, by Miss Grenfell, of Ray Lodge, Mrs. Paget, and Miss Grenfell, of Taplow Court.

Woolston (Southampton).—The new church on the banks of the Southampton water is assuming shape, according to the local *Advertiser*. The exterior presents a nave, with transept and chancel. Over a low north aisle rises a clerestory, and a simple porch groups beside the base of the unfinished tower. The exterior is built of Swanage stone, with windows, gable copings, and other dressings of Corsham Down. A series of arches on the south side, temporarily filled in, shows the possibility of subsequent extension. The facing of the walls and arches is of bricks of several tints, arranged in regular order, in a variety of patterns and bands, according to their several positions. The windows are of varied tracery, and the pillars and capitals are of Bath and of Tisbury stone. The capitals are roughed out ready for carving. On either side of the chancel the arches which separate this from the narrow chancel aisle are carried by a single shaft of polished Devonshire marble. The architect is Mr. W. White, of London; and the builder is Mr. Bull, of Southampton. Funds are still wanted to help the completion of the building.

Wolverhampton.—The foundation-stone of the new Baptist Chapel, which is to be erected in the Waterloo-road, near its junction with Darlington-street, has been laid. Inclusive of the price of the land, the total cost of the new erection will be 3,000*l.* Of this sum upwards of 1,000*l.* have already been promised or subscribed. The new chapel will be a parallelogram, 70 feet by 44 feet, and will include entrance lobby, staircase, wings, and recess for the baptistery. The building will be erected on ground considerably below the road-way level, and facilities will be thus afforded for the conversion of the available space immediately beneath the floor of the chapel into a large school-room, to which access will be easy from the road, on a lower level at the rear. Internally the building is arranged with two side aisles and an eastern gallery, with provision for future side galleries. Externally the eastern front is to consist of a gable, having a central entrance, with small lights on each side into the lobbies, and a grouped triple light window in the gallery. The north wing will be semicircular, and at the south wing rises a tower of the height of 70 feet. At the rear of the chapel there will be a minister's vestry and lecture-room. The building is calculated to accommodate 650 persons. The architect is Mr. Bidlake, and the builder Mr. Burkitt, both of Wolverhampton.

Far Headingley (Yorkshire).—Mr. Edmund Denison, of Doncaster, formerly M.P. for the West Riding, and his eldest son, Mr. E. B. Denison, Q.C., have signified to the vicar of Leeds their intention to build and endow, with an income of 200*l.* a year, the church of Far Headingley, for which a subscription was begun last year; Sir Thomas Beckett, bart., granting the site.

Oxford.—A window has been placed in the south aisle of St. Mary Magdalene church, in memory of the late Bishop of Antigua, Dr. Rigaud, and two of his sisters, by surviving members of their family. The subjects are Faith, Hope, and Charity, with angels in the upper lights holding scrolls, on which are three of the beatitudes, "Blessed are the Merciful," "Blessed are the Pure in Heart," and "Blessed are the Peacemakers." The artist is Mr. Bell, of Bristol.

SCENERY AND THE STAGE.

The Haymarket.—The panorama illustrating the tour of the Prince of Wales in the East, introduced to the public by Mr. Buckstone on Easter Monday, has been some time in preparation. Our readers may remember that Mr. William Telbin, who, with his son, undertook a journey through Turkey, Syria, the Holy Land, and part of Egypt, to make sketches for the purpose, was stricken with fever, and thus the work was delayed. On the occasion of the Prince's marriage, and made to terminate with a view painted by Mr. Grieve, of St. George's Chapel, Windsor, during the celebration of it, the panorama, nevertheless is equally *àpropos*, and, indeed is of that character that it could never be out of place. It comprises Cairo, Philæ (the water admirably managed), Jerusalem, the Jordan, the Dead Sea (a picture of desolation), Nazareth, the Sea of Galilee (a beautiful work), Mount Hermon (f the Interior of a Turk's House in Damascu lighted up; Baalbec, Beyrout, and Constantinopl This beautiful set of pictures ought to draw thou sands. It would doubtless pay to show it by an by, in the morning, at a shilling, for the advantag of a large public who do not care for the theatr or dislike late hours.

The dramatic sketch which precedes the pan rama, "Buckstone at Home," by Mr. Stirli Coyne, is exceedingly well written, and introduc cleverly many of the favourites, together with

ew candidate for Haymarket favour, Miss Winter, ho as *Italian Opera* sings a *scena* with great ccess. "Much Ado about Nothing" has been ayed to introduce Miss Louisa Angel, a young stress from Newcastle, in the difficult part of *eatrice*, which was presented sufficiently well to ow that the lady is likely to be a valuable quisition. Mr. Walter Gordon, heretofore at the lympic, and who has the advantage of being a ntleman, acted *Claudio* with skill and intelli- nce. Mr. Howe is an excellent *Benedick*; Mr. arren very good as *Don Pedro*; and Mr. Compton born *Dogberry*, the immortal type of an ever- esent family.

The Princess's.—The Extravaganza here is ry amusing and very well played,—Miss Oliver, iss Murray, Miss Howard, Miss Hudspeth, Mr. elmore, and Mr. C. Seyton, sustaining the prin- pal parts. It is called "Beautiful Haidee," and compounded by its author, Mr. H. J. Byron, om "Don Juan," "Lurline," and "Lord Bate- an," an odd mixture enough. Mr. F. Lloyds, who rapidly taking a high place in his profession, s painted some remarkably good scenery for it;— e shore of a Grecian island after a storm, with lling sea; the Mermaid's Haunt; and the Floral all of the Caryatides. The second of these is pecially clever. Lord Bateman is seen in the ater, under the wrecked vessel; and this, gra- ally rising, terminates in the mermaid's haunt, fairy scene of great beauty. Some pretty ncing completes the success.

Another New Theatre.—Another new theatre talked of, in the neighbourhood of Chancery- ne. It is to be of iron, it is stated; and great re is to be taken to provide for the comfort of e visitors. If this point were considered, before be too late, by managers of existing houses, it ould be advantageous. A four hours' confine- nt in some of our theatres is simply insup- rtable. Try the upper boxes at the St. James's eatre, for example; and if you have long legs u will vow never to do it again. The box- epers here, by the way, are most importunate. rely 3s. a-piece is enough for the horrible con- ement, without being *forced* to hand over other sixpence or shilling to be allowed to get o a seat.

THE THAMES EMBANKMENT.

In a report to the Metropolitan Board of orks, Mr. Bazalgette says,—

"The total length of the embankment is about 7,000 t, but it is completely divided by the bridges into three ctions, each of which will be viewed by itself, and the e of vision will not ordinarily be continued from one ction to the other. The first section is from Westminster Hungerford Bridge, the second from Hungerford idge to Waterloo, and the third from Waterloo to ackfriars Bridge.

A continuous line of embankment wall would not in lf be productive of much architectural effect: the pre- at landing-places for steamboats are exceedingly ugly, d there would be much difficulty in connecting the er wall with the existing bridges, so as to produce an ective and consistent design.

At each of the bridges there are, and must be, landing- ces for steamers; and midway between the bridges re are landing-places of some description, which will ve to be maintained.

To meet these requirements it is proposed to treat each ngth of embankment from bridge to bridge as a com- te design, and to make the steamboat piers and land- g-places prominent and effective, as well as useful and cessary features.

At Westminster Bridge, the roadway, which rises at an dination of 1 in 80 to the level of the bridge, is set back ne 30 or 40 feet from the face of the embankment wall; d the intervening space would be preserved as a prome- de and steamboat-p er, having access from the bridge a wide and imposing flight of steps opposite the Houses Parliament. This will terminate without abruptness e varying styles of architecture at this point. Between estminster and Hungerford Bridges would be landing- irs for smaller craft; and here it is proposed to intro- ce the beautiful water-gate now situate at the end of ckingham-street, and erected after a design by Inigo nes. On either side of Hungerford and Waterloo idges would be steamboat landing-piers, the dummies which would be partly concealed within recesses med by projecting into the river, in front of the general e of embankment, massive granite piers with moulded destals rising about 30 feet above the roadway, and reafter to be enriched with bas-reliefs and surmounted groups of statuary.

Half way between Hungerford and Waterloo bridges it proposed to construct a flight of landing steps 60 feet de, projecting into the river, and flanked at each end th massive piers, rising to the level of a few feet above e roadway, and hereafter to be surmounted with colossal figures of river deities, or other appropriate oups. It is proposed to form an approach for foot pas- engers from the high level roadway to the river by a cond flight of steps, descending to the level of the lower embankment roadway, which would aid much to the ject of this central feature as viewed from the river. On ther side of this approach a line of shops could be ected on the land side of the embankment roadway, e backs of which would form a retaining wall to the ornamental crescent and promenade above them.

Between Waterloo and Blackfriars bridges, and in front Arundel-street, a steamboat pier would be constructed, idea of the present Essex-street pier, designed upon the ne principle as those adjoining the bridges.

The embankment wall itself has been enriched with mouldings of a simple character down to the level of high-water mark, the continuous line of moulding being broken by the introduction, at intervals, of massive blocks of granite to carry ornamental lamps, and by occasional recesses for promenade seats.

It is proposed in the first instance to construct the embankment wall and fill in behind it to the level of 4 feet above Trinity high-water mark, and afterwards to arrange for the laying out of the area reclaimed. I propose to divide the work into two contracts, the first, from Westminster to Waterloo Bridge, which may be let about the end of May or early in June; and the second, from Waterloo to Blackfriars Bridge, which may be let before August next."

The number of houses required to be taken for the construction of the Thames Embankment on the north side of the river, situate in Printer's-street, Huish-court, Currier-row, Jackson's, Canterbury, and Green Dragon courts, in St. Anne's, Blackfriars, amounts to thirty-two, consisting of tenements containing from three to eight rooms, and the number of persons to be displaced thereby 437, children included. The number of houses to be taken for the construction of the Southern Embankment in High-street, Vauxhall, Princes-street, Upper and Lower streets, and Stangate, in Lambeth, is 124, including seven model lodging-houses, and calculated to displace 1,175 persons, including children.

WIDE TENDERING AND BILLS OF QUANTITIES.

Sir,—Not unfrequently we see tenders for works varying in amounts, and, in some instances, specially noted by you. I take the liberty of annexing extracts from bill of quantities which I received during the past week;—the greater part of the quantities being but received by the morning's post of the day on which the tenders were to be delivered.

The quantities in question were furnished by the architect, assisted by a gentleman appointed by the architect. This latter gentleman was assumed to represent the contractors, but the contractors were never consulted or allowed to vote on the subject. A commission of 2½ per cent. is modestly charged by these gentlemen for the quantities, in addition to lithography expenses, and this commission is also charged on "*provided sums*," which amounts to one-sixth of the entire cost of the works.

To the outside public it is inexplicable how such large differences do arise; but I think you will agree with me that it is more a cause of wonder that greater differences do not arise under such circumstances as above narrated.

I am well aware that such a course is not in practice in London; but I am anxious that you should know how some gentlemen manage things in a large provincial town, and which boasts itself the metropolis of the Midland Counties.

A Provincial Contractor.

*** To show the insufficient and improper manner in which the quantities are prepared, it will be sufficient if we give two of the extracts sent:—

"No. 1 staircase, from 1st to 2nd floor, 3 ft. wide 13 ft. 6 in. total rise, 13 flyers, 4 winders, 1 quarter space and 1 riser, and nosing with 1½ red deal treads with rounded nosings and hollows mitred and returned; ⅝ in. risers mitred to 1½ in. outside, string beaded on the underside, 1½ in. moulded wall string framed carriages and bearers. Curtail steps and ⅝ in. beaded fascia and nosing to well, the handrail and balusters to be those from present staircase on 1st floor, re-used as far as they will go, and the deficiency made up with new of the same description.

No. 2 staircases, each 3 ft. 4 in. wide, 7 ft. 4 in. total rise, 9 winders and 1 riser and nosing, 1½ in. treads, with rounded nosing, 1 in. risers, 1½ in. beaded wall strings, 4 by 4 rounded central newel carriages and bearers."

ROTHERHAM WATER BILL.

Sir,—Permit me to inform your readers in general and Mr. "Robert White, clerk to the Worksop Local Board of Health," in particular, that I have NOT given any evidence "before the Committee of the House of Commons" relating to the Worksop Waterworks, or to the Worksop Sewerage Works, or to any of the affairs of the Worksop Local Board of Health; of which, indeed, I have no knowledge, and with regard to which I have certainly never "theorized."

Using Mr. White's own phraseology, I beg to "express my regret that a man" of Mr. White's "reputation" should have rushed into print, and made a *personal* attack "without any sufficient data on which to base" his statements; and, "for the credit of the profession, I trust there are few men who would risk their reputation" by making rash and unfounded statements without first communicating with the person intended to be assailed. Mr. White could very easily have addressed himself to me before venturing to propagate a manifestly slanderous imputation.

T. Hawksley.

WHEN IS A HOUSE COMPLETED?
